Müller,2012-08-23 Can we make machines that think and act like humans or other natural intelligent agents The answer to this question depends on how we see ourselves and how we see the machines in question Classical AI and cognitive science had claimed that cognition is computation and can thus be reproduced on other computing machines possibly surpassing the abilities of human intelligence This consensus has now come under threat and the agenda for the philosophy and theory of AI must be set anew re defining the relation between AI and Cognitive Science We can re claim the original vision of general AI from the technical AI disciplines we can reject classical cognitive science and replace it with a new theory e g embodied or we can try to find new ways to approach AI for example from neuroscience or from systems theory To do this we must go back to the basic questions on computing cognition and ethics for AI The 30 papers in this volume provide cutting edge work from leading researchers that define where we stand and where we should go from here

Methods and Tactics in Cognitive Science W. Kintsch,J. R. Miller,P. G. Polson,2014-03-18 First published in 1984 The editors of this volume are three psychologists whose work has brought them into frequent contact with other disciplines within cognitive science particularly linguistics and artificial intelligence Cognitive science is based on the belief that crossing the boundaries of the traditional disciplines is not merely possible but indeed essential in the study of cognition The purpose of this volume is to facilitate this interaction among the disciplines that constitute cognitive science and trying to do this not by an abstract discussion of methodological issues but by concrete example **Philosophy and AI** Robert Cummins,John L.
