Hand, 1991 Causal Models and Intelligent Data Management Alex Gammerman, 2012-12-06 Data analysis and inference have traditionally been research areas of statistics However the need to electronically store manipulate and analyze large scale high dimensional data sets requires new methods and tools new types of databases new efficient algorithms new data structures etc in effect new computational methods This monograph presents new intelligent data management methods and tools such as the support vector machine and new results from the field of inference in particular of causal modeling In 11 well structured chapters leading experts map out the major tendencies and future directions of intelligent data analysis The book will become a valuable source of reference for researchers exploring the interdisciplinary area between statistics and computer science as well as for professionals applying advanced data analysis methods in industry and commerce Students and lecturers will find the book useful as an introduction to the area **The Power of Data: Driving Climate Change with Data Science and Artificial Intelligence Innovations** Aboul Ella Hassanien, Ashraf Darwish, 2023-03-11 This book discusses the advances of artificial intelligence and data sciences in climate change and provides the power of the climate data that is used as inputs to artificial intelligence systems It is a good resource for researchers and professionals who work in the field of data sciences artificial intelligence and climate change applications AI and Computer Power , 1991 **Mutual Impact of Computing Power and Control Theory** M. Kárny, K. Warwick, 2012-12-06 Recent rapid developments in computing power such as parallel processing and neural networks have stimulated new trends in control However a discrepancy exists between available computing power and exploitable algorithms obtained classically from control theory The aim of this book is to address the discrepancy from both the computational power and control theory viewpoints Areas such as identification adaptive control signal processing and neural networks therefore hold a prominent position in the text presented The form of the book is such that it should be useful for readers at various levels particularly those at the research and or application stage The book has resulted from the IFAC Workshop on the Mutual Impact of Computing Power and Control Theory which was held at the Institute of Information Theory and Automation UTIA Prague in September 1992 Organisation of the event was provided jointly by the Department of

Adaptive Systems UTIA Prague and the School of Engineering and Information Sciences University of Reading UK Selected papers from the Workshop have been chosen to give a good balance across the field whilst at the same time highlighting important areas for future research In this way the book represents edited Proceedings from the Workshop One point quickly apparent is the international nature of the presentations themselves which provide not only a technical appraisal of the field but also inject cultural aspects which are vitally important on the path ahead
