Johnson,1976 This paper presents some elementary applications of Bayesian statistics to problems faced by wildlife biologists Bayesian confidence limits for frequency of occurrence are shown to be generally superior to classical confidence limits Population density can be estimated from frequency data if the species is sparsely distributed relative to the size of the

sample plot For other situations limits are developed based on the normal distribution and prior knowledge that density is non negative which insures that the lower confidence limit is non negative Conditions are describes under which Bayesian confidence limits are superior to those calculated with classical methods examples are also given on how prior knowledge of the density can be used to sharpen inferences drawn from a new sample Helping Children Learn Mathematics, 5th Australian Edition Robert Reys, Mary Lindquist, Diana V.
