Thinking about Android Epistemology Kenneth M. Ford, Clark N. Glymour, Patrick J. Hayes, 2006 Articles by various authors arranged in 5 parts [Handbook of Epistemology](#) I. Niiniluoto, Matti Sintonen, Jan Wolenski, 2004-03-31 Epistemology or theory of knowledge has always been one of the most important if not the most important field of philosophy New arguments are constantly brought to bear on old views new variants are marshalled to revive ancient stands new concepts and distinctions increase the sophistication of epistemological theories There are a great many excellent textbooks monographs as well as anthologies consisting of articles in epistemology Similarly there are useful philosophical dictionaries which contain a great number of relatively short entries and general philosophical handbooks which also touch epistemological issues This volume of 27 essays grew out from the interest to see a handbook which is devoted entirely to the historical roots and systematic development of theory of knowledge It is not intended to compete but to supplement the already existing literature It aims at giving both beginners and more advanced students as well as professionals in epistemology and other areas of philosophy an overview of the central problems and solutions of epistemology The essays are self contained and still often rather extensive discussions of the chosen aspects of knowledge The contributions presuppose very little familiarity with previous literature and only a few of them require the mastery of even elementary logical notation This we hope makes the volume also accessible to the philosophically interested wider audience The contributors were asked to provide substantial up to date self contained and balanced surveys of the various subareas and more specific topics of epistemology with reference to literature

shifts focus slightly to balance the discussions of theory and practice and the writing style is oriented to advanced students. It addresses the contemporary problems of knowledge to develop the basis for a more publicly accountable science. The resources of social epistemology are deployed to provide a positive agenda of research, teaching and political action designed to bring out the best in both the ancient discipline of rhetoric and the emerging field of science and technology studies (STS). The authors reclaim and integrate STS and rhetoric to explore the problems of knowledge as a social process, problems of increasing public interest that extend beyond traditional disciplinary resources. In so doing, the differences among disciplines must be questioned; the exercise of STS and the disciplinary boundaries must be renegotiated; the exercise of rhetoric. This book innovatively integrates a sophisticated theoretical approach to the social processes of creating knowledge with a developing pedagogical apparatus. The thought questions at the end of each chapter, the postscript and the appendix allow the reader to actively engage the text in order to discuss and apply its theoretical insights. Creating new standards for interdisciplinary scholarship and communication, the authors bring numerous disciplines into conversation in formulating a new kind of rhetoric geared toward greater democratic participation in the knowledge making process. This volume is intended for students and scholars in rhetoric of science, science studies, philosophy and communication and will be of interest in English, sociology and knowledge management arenas as well.
