Angiography In Cerebro Arterial Occlusive Diseases Including Computer Tomography And Radionuclide Methods:

Angiography in Cerebro-Arterial Occlusive Diseases G.B. Bradac,R. Oberson,2012-12-06 Although it may seem a rash even ill conceived undertaking to devote a mono graph to cerebral angiography at a time when CT seems to be the most important neuroradiologic procedure this is definitely not the case Moreover the authors are aware of the necessity of taking these new techniques into account Cerebro arterial occlusive diseases are frequently the cause of acute and chronic neurologic disturbances The authors aim in preparing this book was to demonstrate the value of neuroradiology in the diagnosis of these conditions They have accomplished their purpose and above all they have succeeded in demonstrating how angiography and CT complement each other They point out the absolute necessity of high quality in angiographic imaging indeed arterial occlusive diseases may have a very capricious and unexpected evolution that can be followed up by iterative CT examinations for instance once a week but angiography which is performed only once must be as perfect and informative as possible Both authors received part of their training in the Neuroradiologic Department of the University Hospital in Strasbourg I am thus very pleased to find in this book both the perfection I was accustomed to seeing in G B BRADAC's iconography and the sound judgement I always appreciated in R OBERSON Therefore it is with great satisfaction that I write this foreword It is my wish that both authors achieve the recognition they rightfully deserve in the Universities of Berlin and of Lausanne

Bradač,Roland Oberson,1979 Angiography and Computed Tomography in Cerebro-Arterial Occlusive Diseases G.B. Bradac,R. Oberson,2012-12-06 In this age when we are witnessing a veritable explosion in new modalities in diagnostic imaging we continue to have a great need for detailed studies of the vascularity of the brain in patients who have all types of cerebral vascular disease Much of the understanding of cerebral vascular occlusive lesions which we developed in the last two decades was based on our ability to demonstrate the vessels that were affected Much experimental work in animals had been done where major cerebral vessels were obstructed and the effects of these obstructions on the brain observed pathologically However it was not until cerebral angiography could be performed with the detail that became possible in the decades of the 60 s and subsequently that we could begin to understand the relationship of the obstructed vessels observed angiographically to the clinical findings In addition much physiologic information was obtained For instance the concept ofluxury perfusion which is used to describe non nutritional flow through the tissues was observed first angiographically although the term was not used until LASSEN described it as a pathophysiological phenomenon observed during cerebral blood flow studies with radioactive isotopes The concept of embolic occlusions of the cerebral vessels as against thrombosis was clarified and the relative frequency of thrombosis

versus embolism was better understood The concept of collateral circulation of the brain through so called meningeal end to end arterial anastomoses was vastly better understood when serial angiography in obstructive cerebral vascular disease was carried out with increasing frequency **The British Journal of Radiology** ,1986 *Neurochirurgia* ,1979
