Animal Drive The Learning Process Volume 1:

Handbook of Learning and Cognitive Processes (Volume 1) W. Estes, 2014-06-20 From the Foreword Is it possible at present to identify a core cluster of theoretical ideas concepts and methods with which everyone working in the area of learning and cognition needs to be familiar Would it be possible to make explicit the relationships that we feel do or must exist among the various subspecialties ranging from conditioning through perceptual learning and memory to psycholinguistics and to present these in a sufficiently organized way to help specialists and non specialists alike in relating particular lines of research to the broader spectrum of activity These questions were posed to a substantial number of investigators who are currently most active in developing the ideas and doing the research Their response constitutes this Handbook First published in 1975 Volume 1 of this Handbook attempts to present an overview of the field and to introduce the principal theoretical and methodological issues that will persistently recur in the expanded treatments of specific research areas that comprise the later volumes Deferring to the current Zeitgeist rather than to chronology they begin with the present state of cognitive psychology then introduce the comparative approach and conclude this volume with a rapid three chapter review of the evolution of ideas from conditioning to information processing Imitation in Animals and Artifacts Chrystopher L. Nehaniv, Kerstin Dautenhahn, 2002 An interdisciplinary overview of current research on imitation in animals and artifacts **The Origins of Language** Nobuo Masataka, 2008-08-27 Developments in cognitive science indicate that human and nonhuman primates share a range of behavioral and physiological characteristics that speak to the issue of language origins This volume has three major themes woven throughout the chapters First it is argued that scientists in animal behavior and anthropology need to move beyond theoretical debate to a more empirically focused and comparative approach to language Second those empirical and comparative methods are described revealing underpinnings of language some of which are shared by humans and other primates and others of which are unique to humans New insights are discussed and several hypotheses emerge concerning the evolutionary forces that led to the design of language Third evolutionary challenges that led to adaptive changes in communication over time are considered with an eye toward understanding various constraints that channeled the process **Early Child Development in the French Tradition** Andre Vyt, Henriette Bloch, Marc H. Bornstein, 2013-05-13 This volume shares significant contemporary Francophone contributions to developmental psychology outside geographic and intellectual borders of French speaking countries Except for the spread of Piagetian theory after World War II into Anglophone psychology these new publications have not become so well known worldwide as progress in Francophone developmental psychology warrants However the work of a new generation of developmental theorists and experimentalists continues to shape important and original lines of thinking and research in France Canada and in other French speaking countries This work also contributes uniquely to issues such as sensori motor development perception language acquisition social interaction and the growth and induction of cognitive

mechanisms Scientific concepts are not only embedded in a paradigm but also in a culture and a language Instead of writing about Francophone developmental psychology from outside this volume brings together original English language contributions written by researchers working in different Francophone countries Chapters summarize and interpret research on a given topic making explicit the context of philosophical and theoretical traditions in which the empirical advances are embedded Original essays are accompanied by editorial commentaries from eminent scientists working on the same topics in other parts of the world topics that are closely related to Francophone streams of thought and themes of study Together these essays fully and faithfully represent modern scientific perspectives toward understanding many facets of mental growth and development of the young child

Handbook of Cross-cultural Psychology: Theory and method John W. Berry, Ype H. Poortinga, Janak Pandey, 1997 Part of a set containing the contributions of authors from a variety of nations cultures traditions and perspectives this volume offers an up to date assessment of theoretical developments and methodological issues in the rapidly evolving area of cross cultural psychology

Thinking in Psychological Science Jaan Valsiner, 2017-12-02 This book explores the development of ideas in psychology's past It is the initial volume in a series intended to shape such ideas into a valuable resource for the discipline's future Scientists in general are known to ignore their own history considering it to be a graveyard of failures In *Thinking in Psychological Science* selected ideas of key figures in the cognitive comparative and developmental sides of psychology Karl Duncker Karl Bihler Tamara Dembo Zing Young Kuo C Lloyd Morgan Alexander Chamberlain and Arnold Gesell are traced and the social contexts of their ideas are given a collective analysis focusing on the potential of these ideas for the present state of psychology Representing the scientist as hero has become a necessary component when applying for research monies from governmentally controlled funding agencies Yet the reality is just the opposite Science is not just the product of heroes it is the product of many individuals who often search for solutions to basic problems throughout their lifetimes while only a few arrive at breakthroughs Still familiarity with the flow of thought in the efforts to solve the basic problems of humankind is necessary for any understanding of creativity This book analyzes the processes involved in the search for solutions to major theoretical problems of development Kuo Gesell action and cognition Bihler Bunker Dembo and methodology Morgan Ultimately this is an exciting volume that reveals real science in the making *Thinking in Psychological Science* will be of interest to students of the social sciences and intellectual history It is ideal for graduate and upper level undergraduate courses in psychology the sociology of science and cognitive science

Human Motivation Bernard Weiner, 2013-06-17 Weiner introduces and offers his own motivation for producing this most impressive work with the following There are two distinct approaches to

the study of motivation One stratagem is a product of academic experimental procedures while the second is an outgrowth of clinical non experimental methods Each of the approaches has unique advantages and disadvantages But all investigators in this field are guided by a single basic question namely Why do organisms think and behave as they do To help answer that basic question Human Motivation presents an entire range of motivation studies from psychoanalytic social learning and humanistic theory to social facilitation arousal emotions personal responsibility and the irrationality of attributions through chapter and verse of Hullian and Lewinian theory Synthesizing Nature-nurture Gilbert Gottlieb, 2014-09-19 This volume provides a primarily nontechnical summary of experimental and theoretical work conducted over the course of 35 years which resulted in a developmental framework capable of integrating causal influences at the genetic neural behavioral and ecological levels of analysis It describes novel solutions to the nature nurture problem at both the empirical and theoretical levels Following field observations laboratory experiments led to the discovery of the nonobvious prenatal experiential basis of instinctive behavior in two species ground nesting mallard ducklings and hole nesting wood ducklings This work also describes the experiences that lead to the rigid canalization of behavioral development as well as the social and sensory experiences that favor the continuance of flexibility The author also describes in detail a developmental psychobiological systems view that supports a behaviorally and psychologically mediated pathway to evolutionary change in humans and other species Written in a way that is readable to even the nonspecialist the text is accompanied by numerous photographs that illuminate and add personal meaning to the written words Readers will be engaged by the emphasis on the human aspect of the scientific enterprise **Science and Sanity** Alfred Korzybski, 1958 Experimental Psychology Its Scope and Method: Volume V (Psychology Revivals) Joseph Nuttin, Paul Fraisse, Richard Meili, 2014-08-01 First published in English in 1968 Joseph Nuttin contributes the first chapter on Motivation He discusses various aspects of the motivational process Such as incentives conflict social motivation and negative motivation and describes the mechanism of the process The second chapter by Paul Fraisse is on the Emotions Fraisse examines the nature of the emotions both on the behavioural and on the neurophysiological levels and goes on to define and discuss moving situations He shows the different types of expression an emotional reaction may take and discusses the causes of hyper emotionality Richard Meili writes on the Structure of the Personality showing the importance of the idea of trait in the psychology of personality He describes the use of the factorial method in the analysis of personality and gives an account of the beginnings of personality as well as the different parts known as instances of the total organization of personality *The Social Life of Monkeys and Apes* Solly Zuckerman, Solly Baron Zuckerman, 1999 First Published in 1999 Routledge is an imprint of Taylor Francis an informa company Evolution of Learning and Memory Mechanisms Mark A. Motivation Andrew J. Elliot, 2013-05-13 Of the many conceptual distinctions present in psychology today the approach avoidance distinction stands out as one of if not the most fundamental and basic The distinction between approach and avoidance motivation has a venerable history not only within but beyond scientific psychology and the deep utility of this distinction is clearly evident across theoretical traditions disciplines and content areas This volume is designed to illustrate and highlight the central importance of this distinction to serve as a one stop resource for scholars working in this area and to facilitate integration among researchers and theorists with an explicit or implicit interest in approach and avoidance motivation The main body of this volume is organized according to seven broad sections that represent core areas of interest in the study of approach and avoidance motivation including neurophysiology and neurobiology and evaluative processes Each section contains a minimum of four chapters that cover a specific aspect of approach and avoidance motivation The broad applicability of the approach avoidance distinction makes this Handbook an essential resource for researchers theorists and students of social psychology and related disciplines *Collected Papers in Psychology* Edward Chace Tolman, Proceedings of the 15th International Ornithological Congress Voous, 2023-10-09 Psychology Library Editions: History of Psychology Various, 2021-08-19 Originally published between 1928 and 1987 the volumes in this set provide an interesting look back at how psychology has developed as a discipline and some of the problems it has encountered along the way It includes volumes focusing on the history of specific fields such as developmental and experimental psychology as well as examining the roots of psychological theory as a whole and how it has informed many of the fields of psychology we know today **The Social Life Of Monkeys And Apes** S.
