Cognitive Perspectives on Emotion and Motivation V. Hamilton, Gordon H. Bower, Nico H. Frijda, 2012-12-06 This book presents the contributions of the members of an Advanced Research Workshop on Cognitive Science Perspectives on Emotion Motivation and Cognition The Workshop funded mainly by the NATO Scientific Affairs Division together with a contribution from the British Economic and Social Research Council was conducted at Il Ciocco Tuscany Italy 21-27 June 1987 The venue for our discussions was ideal a quiet holiday hotel 500m high in the Apennine mountain range approached by a mile of perilously steep winding narrow road The isolation was conducive to concentrated discussions on the topics of the Workshop The reason for the Workshop was a felt need for researchers from disparate but related approaches to cognition emotion and motivation to communicate their perspectives and arguments to one another To take just one example the framework of information processing and the

metaphor of mind as a computer has wrought a major revolution in psychological theories of cognition. That framework has radically altered the way psychologists conceptualize perception, memory, language, thought, and action. Those advances have formed the intellectual substrate for the cognitive science perspective on mental life.

The Cognitive Animal Marc Bekoff, Colin Allen, Gordon M. Burghardt, 2002-06-21. The fifty-seven original essays in this book provide a comprehensive overview of the interdisciplinary field of animal cognition. The contributors include cognitive ethologists, behavioral ecologists, experimental and developmental psychologists, behaviorists, philosophers, neuroscientists, computer scientists, and modelers, field biologists, and others. The diversity of approaches is both philosophical and methodological, with contributors demonstrating various degrees of acceptance or disdain for such terms as consciousness and varying degrees of concern for laboratory experimentation versus naturalistic research. In addition to primates, particularly the nonhuman great apes, the animals discussed include antelopes, bees, dogs, dolphins, earthworms, fish, hyenas, parrots, prairie dogs, rats, ravens, sea lions, snakes, spiders, and squirrels. The topics include but are not limited to definitions of cognition, the role of anecdotes in the study of animal cognition, anthropomorphism, attention, perception, learning, memory, thinking, consciousness, intentionality, communication, planning, play, aggression, dominance, predation, recognition, assessment of self and others, social knowledge, empathy, conflict resolution, reproduction, parent/young interactions, and caregiving, ecology, evolution, kin selection, and neuroethology.

Handbook of Cognition and Emotion Michael D. Robinson, Edward R. Watkins, Eddie Harmon-Jones, 2013-03-29. Comprehensively examining the relationship between cognition and emotion, this authoritative handbook brings together leading investigators from multiple psychological subdisciplines. Biological underpinnings of the cognition/emotion interface are reviewed, including the role of neurotransmitters and hormones. Contributors explore how key cognitive processes such as attention, learning, and memory shape emotional phenomena and vice versa. Individual differences in areas where cognition and emotion interact, such as agreeableness and emotional intelligence, are addressed. The volume also analyzes the roles of cognition and emotion in anxiety, depression, borderline personality disorder, and other psychological disorders.

Emotional Cognition Simon C. Moore, Mike Oaksford, 2002-08-08. Emotional Cognition gives the reader an up-to-date overview of the current state of emotion and cognition research that is striving for computationally explicit accounts of the relationship between these two domains. Many different areas are covered by some of the leading theorists and researchers in this area, and the book crosses a range of domains from the neurosciences through cognition and formal models to philosophy. Specific chapters consider, amongst other things, the role of emotion in decision making, the representation and evaluation of emotive events, the relationship of affect on working memory and goal regulation. The emergence of such an integrative computational approach in emotion and cognition research is a unique and exciting development, one that will be of interest to established scholars as much as graduate students finding their way in this area and applicable to research in applied as well as purely theoretical domains.

Series B Cognitive Neuroscience of Emotion

Richard D. Lane, Lynn Nadel, 2000 This book a member of the Series in Affective Science is a unique interdisciplinary sequence of articles on the cognitive neuroscience of emotion by some of the most well known researchers in the area It explores what is known about cognitive processes in emotion at the same time it reviews the processes and anatomical structures involved in emotion determining whether there is something about emotion and its neural substrates that requires they be studied as a separate domain Divided into four major focal points and presenting research that has been performed in the last decade this book covers the process of emotion generation the functions of amygdala the conscious experience of emotion and emotion regulation and dysregulation Collectively the chapters constitute a broad but selective survey of current knowledge about emotion and the brain and they all address the close association between cognitive and emotional processes By bringing together diverse strands of investigation with the aim of documenting current understanding of how emotion is instantiated in the brain this book will be of use to scientists researchers and advanced students of psychology and neuroscience

Current Research and Emerging Directions in Emotion-Cognition Interactions Florin Dolcos, Lihong Wang, Mara Mather, 2015-03-02 Emotion can impact various aspects of our cognition and behavior by enhancing or impairing them e g enhanced attention to and memory for emotional events or increased distraction produced by goal irrelevant emotional information On the other hand emotion processing is also susceptible to cognitive influences typically exerted in the form of cognitive control of motion or emotion regulation Despite important recent progress in understanding emotion cognition interactions a number of aspects remain unclear The present book comprises a collection of manuscripts discussing emerging evidence regarding the mechanisms underlying emotion cognition interactions in healthy functioning and alterations associated with clinical conditions in which such interactions are dysfunctional Initiated with a more restricted focus targeting 1 identification and in depth analysis of the circumstances in which emotion enhances or impairs cognition and 2 identification of the role of individual differences in these effects our book has emerged into a comprehensive collection of outstanding contributions investigating emotion cognition interactions based on approaches spanning from behavioral and lesion to pharmacological and brain imaging and including empirical theoretical and review papers alike Co hosted by the Frontiers in Neuroscience Integrative Neuroscience and Frontiers in Psychology Emotion Science the contributions comprising our book and the associated research topic are grouped around the following seven main themes distributed across the two hosting journals I Emotion and Selectivity in Attention and Memory II The Impact of Emotional Distraction Linking Enhancing and Impairing Effects of Emotion III What Really is the Role of the Amygdala IV Age Differences in Emotion Processing The Role of Emotional Valence V Affective Face Processing Social Cognition and Personality Neuroscience VI Stress Mood Emotion and the Prefrontal Cortex The Role of Control in the Stress Response VII Emotion Cognition Interactions in Clinical Conditions As illustrated by the present collection of contributions emotion cognition interactions can be identified at different levels of processing from perception and attention to long term memory

decision making processes and social cognition and behavior. Notably these effects are subject to individual differences that may affect the way we perceive experience and remember emotional experiences or cope with emotionally challenging situations. Moreover these opposing effects tend to co occur in affective disorders such as depression and PTSD where uncontrolled recollection of and rumination on distressing memories also lead to impaired cognition due to emotional distraction. Understanding the nature and neural mechanisms of these effects is critical as their exacerbation and co occurrence in clinical conditions lead to devastating effects and debilitation. Hence bringing together such diverse contributions has allowed not only an integrative understanding of the current extant evidence but also identification of emerging directions and concrete venues for future investigations.

Handbook of Emotions, Third Edition Michael Lewis, Jeannette M. Haviland-Jones, Lisa Feldman Barrett, 2008-04-17 Widely regarded as the standard reference in the field this handbook comprehensively examines all aspects of emotion and its role in human behavior. Development of Nonverbal Behavior in Children R. S. Feldman, 2013-03-14 When I organized a symposium on the development of nonverbal behavior for the 1980 meeting of the American Psychological Association I was faced with an embarrassment of riches. Thinking about the many people who were doing important and interesting research in this area it was hard to narrow down the choice to just a few. Eventually I put together a panel which at least was representative of this burgeoning area of research. In planning this volume two years later I was faced with much the same predicament except to an even larger degree. For during that short period the area of children's nonverbal behavior came to grow even larger with more perspectives being brought to bear on the question of the processes involved in the development of children's nonverbal behavior. The present volume attempts to capture these advances which have occurred as the field of children's nonverbal behavior has moved from its own infancy into middle childhood. The book is organized into five major areas representative of the most important approaches to the study of children's nonverbal behavior: 1 Psychobiological and ethological approaches, 2 social developmental approaches, 3 encoding and decoding skill approaches, 4 discrepant verbal/nonverbal communication approaches and 5 personality and individual difference approaches. The discreteness of these categories should not be overemphasized as there is a good deal of overlap between the various approaches. Nonetheless they do represent the major areas of interest in the field of the development of nonverbal behavior in children.
