Kroll,T. Douglas Price,2013-06-29 Investigations of archaeological intrasite spatial patterns have generally taken one of two directions studies that introduced and explored methods for the analysis of archaeological spatial patterns or those that described and analyzed the for mation of spatial patterns in actuaistic ethnographic experimental or natu ral contexts The archaeological studies were largely quantitative in nature concerned with the recognition and definition of patterns the actualistic efforts were often oriented more toward interpretation dealing with how patterns formed and what they meant Our research group on archaeological spatial analysis at the University of Wisconsin Madison has been working for several years on both quantitative and interpretive problems Both lines of investigation are closely related and are important complements In order to demonstrate the convergence of archaeological and actualistic studies for the understanding of intrasite spatial patterns we organized a sympo sium at the

52nd Annual Meeting of the Society of American Archaeology in Toronto Canada in May 1987 The symposium titled The Interpretation of Stone Age Archaeological Spatial Patterns was organized into two sessions The six papers presented in the morning session five of which comprise Part I of this volume focused on ethnoarchaeological and experimental research Michael Schiffer was the discussant for this half of the symposium Our intention for the ethnoarchaeological contributions to the symposium and volume was the delineation of some of the significant accomplishments achieved thus far by actualistic studies regarding the formation of spatial patterns *ARCHAEOLOGY - Volume I* Donald L. Osteology Bradley Adams, Pam Crabtree, 2011-08-12 In the forensic context it is quite common for nonhuman bones to be confused with human remains and end up in the medical examiner or coroner system It is also quite common for skeletal remains both human and nonhuman to be discovered in archaeological contexts While the difference between human and nonhuman bones is often very striking it can also be quite subtle Fragmentation only compounds the problem The ability to differentiate between human and nonhuman bones is dependent on the training of the analyst and the available reference and or comparative material Comparative Osteology is a photographic atlas of common North American animal bones designed for use as a laboratory and field guide by the forensic scientist or archaeologist The intent of the guide is not to be inclusive of all animals but rather to present some of the most common species which also have the highest likelihood of being potentially confused with human remains An affordably priced compact laboratory field manual comparing human and nonhuman bones Contains almost 600 high quality black and white images and diagrams including inch and centimeter scales with each photograph Written by the foremost forensic scientists with decades of experience in the laboratory and as
