Genomic characterization of animal genetic resources Food and Agriculture Organization of the United Nations,Ajmone-Marsan, P,Boettcher, P. J.,Ginja, C.,Kantanen J.,Lenstra, J.A,2023-01-12 Molecular biotechnologies have developed rapidly and substantially since the release of these previous guidelines The livestock sector has been an active participant in the so called genomic revolution Advancements in the sequencing of genomes and related genotyping methods have created opportunities for gathering much more information on the molecular level than ever possible at a faster rate and for exponentially decreased costs Scientists and other livestock stakeholders in countries with highly developed economies have been among the main beneficiaries of this revolution However the greatly decreased costs of genomic applications have also created opportunities in countries with developing and transitional economies In many instances the lack of awareness of these opportunities and in the technical capacity for the full application of genomic tools may represent a greater obstacle to their utilization than the expenses involved The development of these guidelines and the subsequent application of the information contained herein may help to bridge this gap bringing new opportunities to light and transferring knowledge that can be used to increase the genetic characterization of AnGR and subsequently improve the sustainable use and conservation of livestock genetic diversity

Genetics, Evolution, and Conservation of Neotropical Fishes Rodrigo A. Torres,Roberto Ferreira Artoni,2020-01-21 Fish represent the most ancestral and specious group of vertebrates and occupy more diverse aquatic environments around the

world Ichthyofauna is extremely diverse especially in megadiverse countries occupying biogeographical regions such as the Neotropical Region which covers an extensive area between North and South America Much of this biodiversity will be extinct even before science knows any aspect of its biology Like this Neotropical fish genetics started in the end of the 70 s with papers studying the chromosomes of *Hoplias malabaricus* Family Erythrinidae and the karyotype variation among three genera of the family Anostomidae The topic at that time was concentrated in two Institutions from the state of S o Paulo Southeastern Brazil In the middle 80 s the first Symposium on Neotropical Fish Cytogenetics was organized Nowadays the field of Neotropical Fish Genetics is present in Brazil Colombia Argentina Uruguay Venezuela Chile and Ecuador as well as outside South America in Panama Mexico USA Canada Czech Republic Germany and Spain The research developed in cytogenetics has focused mainly on karyotype evolution and cytotaxonomy chromosome structure and more recently cytogenomics In relation to the use of molecular markers support has been sought for the management of populations for conservation or production in captivity In addition many studies have been carried out with the aim of establishing supra specific phylogenetic relationships and clarifying species distribution scenarios by phylogeographic modeling The genome and transcriptome of some model species begin to emerge as extremely promising and informative areas for neotropical fish In 2017 the Neotropical fish genetics research community celebrates the 30th anniversary of its main Meeting today entitled Symposium on Neotropical Fish Genetics and Cytogenetics This Research Topic is part of this celebration and aims at reporting the state of the art and its current advances in the frontier of knowledge in genetics evolution and conservation of neotropical fish as well as to detect the challenges to be overcome in the next years
