## **Transdisciplinary Perspectives on Complex Systems**

Franz-Josef Kahlen, Shannon Flumerfelt, Anabela Alves, 2016-08-16 This book presents an internationally comprehensive perspective into the field of complex systems. It explores the challenges of and approaches to complexity from a broad range of disciplines including big data, health care, medicine, mathematics, mechanical and systems engineering, air traffic control and finance. The book's interdisciplinary character allows readers to identify transferable and mutually exclusive lessons learned among these disciplines and beyond. As such, it is well suited to the transfer of applications and methodologies between ostensibly incompatible disciplines. This book provides fresh perspectives on comparable issues of complexity from the top minds on systems thinking.

*Flight Performance of Fixed and Rotary Wing Aircraft* Antonio Filippone, 2006-05-10

Calculation and optimisation of flight performance is required to design or select new aircraft, efficiently operate existing aircraft and upgrade aircraft. It provides critical data for aircraft certification, accident investigation, fleet management, flight regulations and safety. This book presents an unrivalled range of advanced flight performance models for both transport and military aircraft, including the unconventional ends of the envelopes. Topics covered include the numerical solution of supersonic acceleration, transient roll, optimal climb of propeller aircraft, propeller performance, long range flight with en route stop, fuel planning, zero gravity flight in the atmosphere, VSTOL operations, ski jump from aircraft carrier, optimal flight paths at subsonic and supersonic speed, range, payload analysis of fixed and rotary wing aircraft, performance of tandem helicopters, lower bound noise estimation, sonic boom and more. This book will be a valuable text for undergraduate and post graduate level students of aerospace engineering. It will also be an essential reference and resource for practicing aircraft engineers, aircraft operations managers and organizations handling air traffic control, flight and flying regulations, standards, safety, environment and the complex financial aspects of flying aircraft. Unique coverage of fixed and rotary wing aircraft in a unified manner, including optimisation, emissions control and regulation. Ideal for students, aeronautical engineering capstone projects and for widespread professional reference in the aerospace industry. Comprehensive coverage of computer based solution of aerospace engineering problems, the critical analysis of performance data and case studies from real world engineering experience. Supported by end of chapter exercises.
