Airline Network Development in Europe and its Implications for Airport Planning Guillaume Burghouwt, 2016-03-23 The ongoing deregulation and liberalization of worldwide air transport markets confronts airport planners with an increasingly problematic context On the one hand the capital intensive large scale and

complex airport investments need a detailed long medium term planning of airport infrastructure Such planning requires at least predictable traffic volumes and traffic composition within the planning horizon On the other hand airline route networks are increasingly dynamic structures that frequently show discontinuous changes As a consequence the much more volatile airport traffic restricts the value of detailed traffic forecasts Volatility of airport traffic and its composition requires flexibility of airport strategies and planning processes The book explores this dilemma through a detailed study of airline network development airport connectivity and airport planning in the deregulated EU air transport market The questions the book seeks to answer are how have airlines responded to the regime changes in EU aviation with respect to the configuration of their route networks what has been the impact of the reconfiguration of airline network configurations for the connectivity of EU airports how can airport planners and airport authorities deal with the increasingly uncertain airline network behaviour in Europe

Fundamentals of Airport Planning Ravi Lakshmanan, 2023-11-13 Airport planning especially the airside is based on strict compliance with regulatory requirements In heavily urbanized industrialized countries where suitable sites for new airport developments are increasingly hard to find and subjected to unprecedented public scrutiny the role of the airport planner is more crucial than ever Fundamentals of Airport Planning aims to explain airport planning from the ground up Utilizing a basic framework and step by step approach the author introduces the critical parameters for selecting a suitable and best location from among multiple sites International and country specific regulations are described and accounted for The master planning process is described with suitable illustrations and examples and the benefits and best practices of master planning are discussed The location of visual aids lighting and marking and non visual aids Communication Navigation and Surveillance Systems CNS is considered and readers will also learn how to prepare technically feasible plans with various infrastructures and how to assess a project s financial viability This book includes a chapter on land use planning to maximize the utilization of the asset with appropriate control within and outside the airport This book is aimed at postgraduate students who are specializing in aviation or air transport management as well as professionals studying or working in airport planning and design and related aviation topics
