Gottlieb, Janice E. Williams, 2013-11-11 Child adolescent development and behavior have been a traditional concern of primary health care providers However it was not until the mid 1960s that attempts were made to consolidate developmental behavioral issues into an identifiably distinct fund of medical knowledge During the ensuing two decades developmental behavioral pediatrics was recognized as a clinical and research subspecialty within the framework of comprehensive health care for children The influence of public advocacy groups topic dedicated journals national professional specialty societies subject related continuing education programs and federal legislation PL94-142 has

served to crystallize developmental behavioral pediatrics as a specialized field of study As a consequence during the past ten years significant modifications have restructured medical student and pediatric resident education providing an emphasis on developmental behavioral issues The focus on neurodevelopmental educational and psychosocial issues reflects changing priorities in traditional health care for children The postgraduate training of pediatric fellows in two and three year training programs was initiated to accommodate professional manpower needs in both academic and practice settings Many of the problems in childhood development and behavior frequently span the traditional areas of child neurology child psychiatry and general pediatrics As a result there has been some confusion in demarcating professional responsibilities in diagnosis and management as well as poorly defined terminology and classification schemas With the birth of developmental pediatrics as a pediatric specialty a more cohesive fund of knowledge has been accumulated and more meaningful strategies have been designed for prevention diagnosis and management

Practice is a compendium of papers that discusses the processes and pathologies of speech and language such as functional articulation disorders lexical development and a group therapy for treating stuttering Some papers deal with vocal fold vibrations childhood homonymy framework for conversational speech behaviors and vibrotactile testing One paper cites studies of Hersen and Barlow 1976 that treatments warrant consideration only if these are powerful enough to effect obvious gains and of Gilbert McPeck and Mosteller 1977 that treatment research is more likely to give modest than substantial gains the degree of gains which can also be difficult to detect Another paper examines suggestions for teaching words to language disordered children that when knowledge of normal language processes is applied in training approaches effective and individualized programs will follow Used in the treatment of stuttering the Shaping Group which employs action and many other treatment models shows that its approach is effective Another paper notes that before a surgical correction of voice disorders is undertaken the importance of knowing the possible effects of various procedures on the voice should first be known The compendium is well suited for linguists ethnologists psychologists speech therapists and researchers whose works involve linguistics learning communications corrective surgery and syntax

**Children's Language** K. E. Nelson, 2014-03-18 First published in 1983 This series Children's Language reflects the conviction that extensive work on entirely new fronts along with a great deal of reinterpretation of old front data will be necessary before any persuasive and truly orderly account of language For all volumes in the series there is a common scheme of operation with two tactics First to give authors sufficient planning time and freedom to arrive at a chapter length account of their area of thinking which vividly shows both the progress and the problems in that area with the author of each chapter free to find a workable proportion of new experimental contributions review and theory The second tactic concerns the selection of topics for each volume This is Volume 4 Structures about language and thought and children as employed in certain other fields may well be shaken and stimulated particularly in education sociology anthropology literature and language remediation
