Artificial Intelligence in Economics and Management Phillip

Ein-Dor, 2012-12-06 In the past decades several researchers have developed statistical models for the prediction of corporate bankruptcy e g Altman 1968 and Bilderbeek 1983 A model for predicting corporate bankruptcy aims to describe the relation between bankruptcy and a number of explanatory financial ratios These ratios can be calculated from the information contained in a company s annual report The is to obtain a method for timely prediction of bankruptcy a so ultimate purpose

called early warning system More recently this subject has attracted the attention of researchers in the area of machine learning e g Shaw and Gentry 1990 Fletcher and Goss 1993 and Tam and Kiang 1992 This research is usually directed at the comparison of machine learning methods such as induction of classification trees and neural networks with the standard statistical methods of linear discriminant analysis and logistic regression In earlier research Feelders et al 1994 performed a similar comparative analysis The methods used were linear discriminant analysis decision trees and neural networks We used a data set which contained 139 annual reports of Dutch industrial and trading companies The experiments showed that the estimated prediction error of both the decision tree and neural network were below the estimated error of the linear discriminant Thus it seems that we can gain by replacing the traditionally used linear discriminant by a more flexible classification method to predict corporate bankruptcy The data set used in these experiments was very small however

Human-Centred Systems in the Global Economy Yuji Masuda, 2012-12-06 The arrival of the information society in Japan has radically altered the industrial structure work patterns and cultural values of its society The innovation and implementation of information technology has accelerated this change and made its effects more profoundly felt Because of this there is now a need to widen the debate on human centred manufacturing systems to include broader issues such as industrial culture international economies and global knowledge Human Centred Systems in the Global Economy contains the proceedings of an international workshop held at Tokyo Keizai University which looked at the design of human centred systems in the context of these technological and social changes The workshop attracted contributions from internationally known researchers in Europe Japan the USA South East Asia Eastern Europe and the USSR The resulting volume is unique in that it addresses the relationship of information technology to Japanese society as a whole rather than concentrating on technical issues The papers have been divided into three areas covering the structure dimensions and policies and perspectives of the information society Specific areas covered include social and cultural shaping of technology economic interdependence technology and knowledge transfer computer aided design management culture and communication technologies Human Centred Systems in the Global Economy provides a comprehensive assessment of the debates on human centred systems and will be of interest to people in a wide variety of disciplines including information technology economic development management science and related studies of social science and humanities

Artificial Intelligence and Human Institutions Richard Ennals, 2012-12-06 Artificial Intelligence and Human Institutions argues that successful applications of artificial intelligence are possible only within an understanding of human institutions and the limitations of technology Products of artificial intelligence research are becoming widely available to non specialists using low cost computer systems but there has been a lack of communication between researchers and community groups Taking the weak AI position the book explores the way insights and tools from artificial intelligence can be valuable in coming to terms with real world problems Drawing on the author's extensive practical experience in AI research and research management the book brings

together case studies from the fields of education training business engineering defence health and community work and suggests future directions This book deals with advanced concepts of artificial intelligence for non specialist readers while providing an introduction to state of the art developments It seeks to use AI concepts to illuminate the practical and theoretical concerns of institutions and organisations opening up possibilities for new areas of collaborative work and revealing new sources of references and ideas This is the latest title in the Artificial Intelligence and Society series and will be of interest to lecturers and students in AI education social and political sciences and business studies

Artificial Intelligence and Its Discontents Ariane Hanemaayer, 2022-02-01 On what basis can we challenge Artificial Intelligence AI its infusion investment and implementation across the globe This book answers this question by drawing on a range of critical approaches from the social sciences and humanities including posthumanism ethics and human values surveillance studies Black feminism and other strategies for social and political resistance The authors analyse timely topics including bias and language processing responsibility and machine learning COVID 19 and AI in health technologies bio AI and nanotechnology digital ethics AI and the gig economy representations of AI in literature and culture and many more This book is for those who are currently working in the field of AI critique and disruption as well as in AI development and programming It is also for those who want to learn more about how to doubt question challenge reject reform and otherwise reprise AI as it been practiced and promoted

Research and Development in Work and Technology Hans Pomschlegel, 2012-12-06 European Problem Areas of Coordinating Research and Development Strategies in Work and Technology Introduction Hans Pomschlegel Dortmund Germany 1 Initiative and Organizers During several meetings in Stockholm between the Swedish German steering group of the Swedish Work Environment Fund Arbetsmiljofonden and the Project Administration for Work and Technology Projekttrager Arbeit und Technik of the DLR it was common opinion that the coordination of some programme areas and projects of both sides and the cooperation within them showed good progress and fruitful results Contacts and cooperation between research institutions and researchers were also well underway But there was never time to discuss political strategic and operational approaches in the formulation interpretation and implementation of research and development R the German side suggested that such a gathering should not only express German and Swedish voices but should be extended to a wider European forum The workshop could then better deal with the relations between the relevant national European and possibly international programmes It would allow deeper insights into the underlying political structures and mechanisms the system of cooperation and conflict solving between publicly financed programmes promoted institutions and expected results

Human Competence and Business Development Peter Docherty, Barry Nyhan, 2012-12-06 European competitiveness in a global perspective is a major issue on the agenda of the European Union and European industry The question of competitiveness is often related to continual technological change and changing work structures to create more flexible and adaptive work places But these changes are in themselves

insufficient to meet the demands of a turbulent business environment if they are not brought about in close relationship with and anchored to the development of the human resource potential. Technological innovation and modern post Tayloristic work structures place new demands on workers. Workers' abilities and competencies must be raised in virtually every sphere in what are termed the new key core competencies related to knowledge and cognitive skills, social skills, general and work related personality characteristics together with a high level of technological ability. At the same time to make optimal use of the human potential the way in which work is organised and accordingly the way in which people are managed must allow workers to develop and use the required competencies. An integrated Human Resource Development approach is needed in which workers' abilities and competencies take a central place. European competitiveness from this perspective implies a strategic choice by European companies and policy makers to invest in people and their potential abilities. **Skill,**

Technology and Enlightenment: On Practical Philosophy Bo Göranzon, 2012-12-06. Skill Technology and Enlightenment. On practical Philosophy explores the problems of developing a perspective on technology and society on the limits of enlightenment, the relationship between cultural criticism and the epistemology of practical knowledge, tacit knowledge and a non elitist conception of expertise, the role of the arts as a basis for reflection and many other relevant topics. The 1993 international conference in Stockholm was among other things part of a process of building a curriculum for an international graduate programme in the area of culture, skill and technology, a process that has been under way since 1989. **Human**

Machine Symbiosis Karamjit S. Gill, 2012-12-06. There is now a serious discussion taking place about the moment at which human beings will be surpassed and replaced by the machine. On the one hand we are designing machines which embed more and more human intelligence but at the same time we are in danger of becoming more and more like machines. In these circumstances we all need to consider: What can we do? What should we do? What are the alternatives of doing it? This book is about the human centred alternative of designing systems and technologies. This alternative is rooted in the European tradition of human centredness which emphasises the symbiosis of human capabilities and machine capacity. The human centred tradition celebrates the diversity of human skill and ingenuity and provides an alternative to the mechanistic paradigm of one best way, the sameness of science and the dream of the exact language. This alternative vision has its origin in the founding European human centred movements of the 1970s. These include the British movement of Socially Useful Technology, the Scandinavian movement of Democratic Participation and the German movement of Humanisation of Work and Technology. The present volume brings together various strands of human centred systems philosophy which span the conceptual richness and cultural diversity of the human centred movements. The core ideas of human centredness include human machine symbiosis, the tacit dimension of knowledge, the system as a tool rather than a machine, dialogue, participation, social shaping and usability. **Critiques of Knowing** Lynette Hunter, 2002-03-11. Critiques of Knowing explores what happens to science and computing when we think of them as texts. Lynette Hunter elegantly weaves together vast areas of

thought rhetoric politics AI computing feminism science studies aesthetics and epistemology Critiques of Knowing shows us that what we need is a radical shake up of approaches to the arts if the critiques of science and computing are to come to any fruition

Experimental Learning in Production Management Riitta Smeds,J. Smeds,2013-06-29 This book is based on the presentations at the Third Workshop on Games in Production Management The Effects of Games on Developing Production Management held in Espoo Finland June 27 29 1997 The workshop was organized by the Special Interest Group on Games of IFIP Working Group 5.7 which is coordinated by Professor Jens Riis The Special Interest Group aims to enhance learning in production management in academia and in industry through the development application and research of simulation games Currently the Special Interest Group is developing a catalogue of games in production management which will be available on the Internet The two previous workshops of the Special Interest Group were held in Aalborg and in Sønderborg and a workshop and exhibition of simulation games was arranged in connection with the APMS 96 Conference in Kyoto in November 1996 In these workshops various simulation games have been presented experimented and discussed and experiences exchanged As a result a network of researchers and teachers interested in games has been created The third workshop with participants from ten countries further expanded and strengthened the network and created ideas for potential joint research projects in simulation for learning in production management The workshop was sponsored by the IFIP Working Group 5.7 on Computer Aided Production Management Systems Helsinki University of Technology the Finnish Graduate School of Industrial Management and the City of Espoo which we gratefully acknowledge

Challenges and Issues in Knowledge Management Anthony F. Buono,Flemming Poulfelt,2005-09-01 Challenges and Issues in Knowledge Management the fifth volume in the Research on Management Consulting series presents sixteen chapters that explore these various perspectives focusing on knowledge management within the context of the management consulting industry the dynamics associated with knowledge sharing and dissemination methodological approaches to studying knowledge in organizations and reflections on knowledge management and management consulting As the chapters underscore it is important to ensure that KM initiatives are aligned with the needs of the organization and its members that the KM system is owned by organizational members with particular emphasis on executive sponsorship and team member acceptance and that it be understood as an ongoing process rather than simply another management objective or faddish consulting tool The focus therefore should be on how knowledge processes can be facilitated leveraged and utilized in organizational value creation

The Practical Intellect Bo Göranzon,2013-03-14 The intention of this book is not to add another technical work to the series of publications already available on matters connected with the relations between natural and artificial intelligence nor to repeat the positions already well expressed in for example the debate between John Searle Daniel Dennett and Hubert Dreyfus It is an attempt to encourage philosophical reflection on dimensions of the subject that have hitherto been somewhat neglected This book which explores a number of case studies is the fifth in the series the previous four books
