Artificial Intelligence in Perspective Daniel Gureasko Bobrow,1993 **Knowing our World: An Artificial Intelligence Perspective** George F. Luger,2021-07-02

Knowing our World An Artificial Intelligence Perspective considers the methodologies of science computation and artificial intelligence to explore how we humans come to understand and operate in our world While humankind s history of articulating ideas and building machines that can replicate the activity of the human brain is impressive Professor Luger focuses on understanding the skills that enable these goals Based on insights afforded by the challenges of AI design and program building Knowing our World proposes a foundation for the science of epistemology Taking an interdisciplinary perspective the book demonstrates that AI technology offers many representational structures and reasoning strategies that support clarification of these epistemic foundations This monograph is organized in three Parts the first three chapters introduce the reader to the foundations of computing and the philosophical background that supports the AI tradition These three chapters describe the origins of AI programming as iterative refinement and the representations and very high level language tools that support AI application building The book s second Part introduces three of the four paradigms that represent research and development in AI over the past seventy years the symbol based connectionist and complex adaptive systems Luger presents several introductory programs in each area and demonstrates their use The final three chapters present the primary theme of the book bringing together the rationalist empiricist and pragmatist philosophical traditions in the context of a Bayesian world view Luger describes Bayes theorem with a simple proof to demonstrate epistemic insights He describes research in model building and refinement and several philosophical issues that constrain the future growth of AI The book concludes with his proposal of the epistemic stance of an active pragmatic model revising realism

Communication from an Artificial Intelligence Perspective Andrew Ortony,Jon Slack,Oliviero Stock,2012-12-06 Castel Ivano originally built in 1375 is one of many beautiful and impressive castles strategically placed atop hills in Trentino s Valsugana in Northern Italy It was in this castle on a series of brilliant sunny crisp November days in 1990 that an international group of computer scientists and

cognitive scientists met at a workshop to discuss theoretical and applied issues concerning communication from an Artificial Intelligence and Cognitive Science perspective About forty people representing nine countries participated in the workshop either as speakers discussants or observers The main motivation for the workshop was to address the question of whether and how current computational approaches to communication can or might be able to accommodate the range of complexities that characterize both human human and human machine communication The chapters in this book are based on the papers that were presented at the workshop They are presented in an order that is determined primarily by the specificity of the topics they address The initial chapters are more theoretical in nature with an emphasis on formal approaches to communication The middle chapters focus on particular application issues such as the generation of multimedia documents and the role of planning in building systems to support human human or human machine interaction The final few chapters consider more general issues relating to communication such as the influence of social structure on and the role of affect in communication

Knowledge Representation Han Reichgelt, 1991 Most researchers to date in artificial intelligence has been based on the knowledge representation hypothesis that is the assumption that in any artificial intelligence AI programme there is a separate module which represents the information that the programme has about the world As a result a number of so called knowledge representation formalisms have been developed for representing this kind of information in a computer *An Introduction to Universal Artificial Intelligence* Marcus Hutter, David Quarel, Elliot Catt, 2024-05-28 An Introduction to Universal Artificial Intelligence provides the formal underpinning of what it means for an agent to act intelligently in an

unknown environment First presented in Universal Algorithmic Intelligence Hutter 2000 UAI offers a framework in which virtually all AI problems can be formulated and a theory of how to solve them UAI unifies ideas from sequential decision theory Bayesian inference and algorithmic information theory to construct AIXI an optimal reinforcement learning agent that learns to act optimally in unknown environments AIXI is the theoretical gold standard for intelligent behavior The book covers both the theoretical and practical aspects of UAI Bayesian updating can be done efficiently with context tree weighting and planning can be approximated by sampling with Monte Carlo tree search It provides algorithms for the reader to implement and experimental results to compare against These algorithms are used to approximate AIXI The book ends with a philosophical discussion of Artificial General Intelligence Can super intelligent agents even be constructed Is it inevitable that they will be constructed and what are the potential consequences This text is suitable for late undergraduate students It provides an extensive chapter to fill in the required mathematics probability information and computability theory background You can also visit the author website <http://www.hutter1.net/ai/uaibook2.htm> Artificial Intelligence and Human Institutions Richard Ennals, 2012-12-06 Artificial Intelligence and Human Institutions argues that successful applications of artificial intelligence are possible only within an understanding of human institutions and the limitations of technology Products of artificial intelligence research are becoming widely available to non specialists using low cost computer systems but there has been a lack of communication between researchers and community groups Taking the weak AI position the book explores the way insights and tools from artificial intelligence can be valuable in coming to terms with real world problems Drawing on the author's extensive practical experience in AI research and research management the book brings together case studies from the fields of education training business engineering defence health and community work and suggests future directions This book deals with advanced concepts of artificial intelligence for non specialist readers while providing an introduction to state of the art developments It seeks to use AI concepts to illuminate the practical and theoretical concerns of institutions and organisations opening up possibilities for new areas of collaborative work and revealing new sources of references and ideas This is the latest title in the Artificial Intelligence and Society series and will be of interest to lecturers and students in AI education social and political sciences and business studies
