Artificial Neural Networks Learning Algorithms Performance Evaluation And Applications:

Artificial Neural Networks Nicolaos Karayiannis, Anastasios N. Venetsanopoulos, 2013-03-12 1 1 Overview We are living in a decade recently declared as the Decade of the Brain Neuroscientists may soon manage to work out a functional map of the brain thanks to technologies that open windows on the mind With the average human brain consisting of 15 billion neurons roughly equal to the number of stars in our milky way each receiving signals through as many as 10 000 synapses it is quite a view The brain is the last and greatest biological frontier says James Weston codiscoverer of DNA considered to be the most complex piece of biological machinery on earth After many years of research by neuroanatomists and neurophysiologists the overall organization of the brain is well understood but many of its detailed neural mechanisms remain to be decoded In order to understand the functioning of the brain neurobiologists have taken a bottom up approach of studying the stimulus response characteristics of single neurons and networks of neurons while psychologists have taken a top down approach of studying brain functions from the cognitive and behavioral level While these two approaches are gradually converging it is generally accepted that it may take another fifty years before we achieve a solid microscopic intermediate and macroscopic understanding of brain

A Design and Development Method for Artificial Neural Network Projects Stefan Vogt, 2000-01-03 Inhaltsangabe Abstract In the 1980s research efforts and

successes made artificial neural networks popular Since the 1990s engineers have been using this foundation for problem solving But artificial neural network solutions for real world problems are sometimes hard to find because of the complexity of the domain and because of the vast number of design attributes the engineer has to deal with This thesis provides a structured overview of attributes in the design process of artificial neural networks and reviews technical process models Current development methods for artificial neural networks are then reviewed and critiqued The thesis concludes with a new design and development method for artificial neural networks

Applied Intelligent Systems John Fulcher, 2012-10-16 Humans have always been hopeless at predicting the future most people now generally agree that the margin of viability in prophecy appears to be 1 ten years Even sophisticated research endeavours in this arena tend to go 2 off the rails after a decade or so The computer industry has been particularly prone to bold and often way off the mark predictions for example I think there is a world market for maybe five computers Thomas J Watson IBM Chairman 1943 I have traveled the length and breadth of this country and talked with the best people and I can assure you that data processing is a fad that won't last out the year Prentice Hall Editor 1957 There is no reason why anyone would want a computer in their home Ken Olsen founder of DEC 1977 and 640K ought to be enough for anybody Bill Gates CEO Microsoft 1981 3 The field of Artificial Intelligence right from its inception has been particularly plagued by bold prediction syndrome and often by leading practitioners who should know better AI has received a lot of bad press 4 over the decades and a lot of it deservedly so How often have we groaned in despair at the latest by the year 20xx we
