Artistic Anatomy Mathias Duval, 1884 *A Manual of Artistic Anatomy* Robert Knox, 1852 A manual of artistic anatomy Robert Knox, 1852 *The Complete Guide to Artistic Anatomy* John C.L. Sparkes, 2012-08-08 A valuable resource for practicing artists this systematic presentation explores the depiction of bones and muscles both in detail and in larger groups Captions and extensive descriptions 49 full page plates plus numerous smaller drawings *Artistic Anatomy of Animals* Édouard Cuyer, 2024-11-24 A few lines will suffice to explain why we have compiled the present volume to what wants it responds and what its sphere of usefulness may possibly embrace In our teaching of plastic anatomy especially at the cole des Beaux Arts where for the past nine years we have had the very great honour of supplementing the teaching of our distinguished master Mathias Duval after having been prosector for his course of lectures since 1881 it is our practice to give as a complement to the study of human anatomy a certain number of lessons on the anatomy of those animals which artists might be called on to represent Now we were given to understand that the subject treated in our lectures interested our hearers so much so that we were not surprised to learn that a certain number repeatedly expressed a desire to see these lectures united in book form douard Cuyer GENERALITIES OF COMPARATIVE ANATOMY Of the animals by which we are surrounded there are some which occupying a place in our lives by reason of their natural endowments are frequently represented in the works of artists either as accompanying man in his work or in his amusements or as intended to occupy the whole interest of the composition The necessity of knowing from an artistic point of view the structure of the human body makes clear the importance we attach from the same point of view to the study of the anatomy of animals that is the study of comparative anatomy The name employed to designate this branch of anatomy shows that the object of this science is the study of the relative position and form which each region presents in all organized beings taking for comparison the corresponding regions in man The head in animals compared with the human head the trunk and limbs compared to the trunk and limbs of the human being this is the analysis we undertake and the plan of the subject we are about to commence Our intention being as we have just said the comparison of the structure of animals with that of man should we describe the anatomy of the human being in the pages which follow We do not think so Plastic human anatomy having been previously studied in special works we take it for granted that these have been studied before undertaking the subject of comparative anatomy We will therefore not occupy time with the elementary facts relative to the skeleton and the superficial layer of muscles We will not dilate on the division of the bones into long short large single paired etc All these preliminary elements we shall suppose to have been already studied This being granted it is nevertheless necessary to take a rapid bird s eye view of organized beings and to recall the terms used in their classification Animals are primarily classed in great divisions based on the general characters which differentiate them most These divisions or branches allow of their being so grouped that in each of them we find united the individuals whose general structure is uniform and under the name of vertebrates are

included man and the animals with which our studies will be occupied The vertebrates as the name indicates are recognised by the presence of an interior skeleton formed by a central axis the vertebral column round which the other parts of the skeleton are arranged The vertebrate branch is divided into classes fishes amphibians or batrachians reptiles birds and mammals
