Reydon, Lia Hemerik, 2005-12-05 The present volume originated in 2001 when we together with our publishing editors at then Kluwer Academic Publishers realized that the th following year the 50 volume of our journal Acta Biotheoretica would see the light We felt that this milestone should not pass unnoticed and that the appropriate way to mark it would be the publication of a special volume of papers on theoretical biology While editing this book during 2003 and early 2004 we realized that another milestone was not far off in 2005 it will be 70 years ago that the journal was founded We hope that the book lying before you will serve well to mark both events The papers collected here have been written on invitation by representatives of the theoretical biology community in The Netherlands They are intended to reflect the entire spectrum of topics on which Acta Biotheoretica publishes ranging from philosophy of biology on one end to mathematical biology on the other All chapters except our own introductory one have been peer reviewed according to the standards that are maintained with respect to regular submissions to Acta Biotheoretica Measuring and Reasoning Fred L. Bookstein, 2014-02-28 In Measuring and Reasoning Fred L Bookstein examines the way ordinary arithmetic and numerical patterns are translated into scientific understanding showing how the process relies on two carefully managed forms of argument Abduction the generation of new hypotheses to accord with findings that were surprising on previous hypotheses and Consilience the confirmation of numerical pattern claims by analogous findings at other levels of measurement These profound principles include an understanding of the role of arithmetic and more importantly of how numerical patterns found in one study can relate to numbers found in others More than 200 figures and diagrams illuminate the text The book can be read with profit by any student of the empirical nature or social sciences and by anyone concerned with how scientists persuade those of us who are not scientists why we should credit the most important claims about scientific facts or theories The Sleep of Others and the Transformations of Sleep Research Kenton Kroger, 2007-01-01 We tend to think of sleep as a private concern a night time retreat from the physical world into the realm of the subconscious Yet sleep also has a public side it has been the focal point of religious ritual philosophic speculation political debate psychological research and more recently neuroscientific investigation and medical practice In this first ever

history of sleep research Kenton Kroger draws on a wide range of material to present the story of how an investigative field at one time dominated by the study of dreams slowly morphed into a laboratory based discipline The result of this transformation Kroger argues has changed the very meaning of sleep from its earlier conception to an issue for public health and biomedical intervention Examining a vast historical period of 2500 years Kroger separates the problems associated with the history of dreaming from those associated with sleep itself and charts sleep related diseases such as narcolepsy insomnia and sleep apnea He describes the discovery of rapid eye movement REM during the 1950s and shows how this discovery initiated the creation of dream laboratories that later emerged as centres for sleep research during the 1960s and 1970s Kroger s work is unique in subject and scope and will be enormously useful for both sleep researchers medical historians and anybody who s ever lost a night s sleep

Metatheory in Social Science Donald Winslow Fiske, Richard A. Shweder, 1986-03-15 What is the nature of the social sciences What kinds of knowledge can they and should they hope to create Are objective viewpoints possible and can universal laws be discovered Questions like these have been asked with increasing urgency in recent years as some philosophers and researchers have perceived a crisis in the social sciences Metatheory in Social Science offers many provocative arguments and analyses of basic conceptual frameworks for the study of human behavior These are offered primarily by practicing researchers and are related to problems in disciplines as diverse as sociology psychology psychiatry anthropology and philosophy of science While various points of view are expressed in these nineteen essays they have in common several themes including the comparison of social and natural science the role of knowledge in meeting the demands of society and its pressing problems and the nature and role of subjectivity in science Some authors hold that subjectivity cannot be studied scientifically others argue that it can and must be if progress in knowledge is to be made The essays demonstrate the philosophical pluralism they discuss and give a wide range of alternative positions on the future of the social and behavioral sciences in a postpositivist intellectual world

Handbook of Communication and Aging Research Jon F. Nussbaum, Justine Coupland, 2004-04-12 This second edition of the Handbook of Communication and Aging Research

captures the ever changing and expanding domain of aging research Since it was first recognized that there is more to social aging than demography gerontology has needed a communication perspective Like the first edition this handbook sets out to demonstrate that aging is not only an individual process but an interactive one The study of communication can lead to an understanding of what it means to grow old We may age physiologically and chronologically but our social aging how we behave as social actors toward others and even how we align ourselves with or come to understand the signs of difference or change as we age are phenomena achieved primarily through communication experiences Synthesizing the vast amount of research that has been published on communication and aging in numerous international outlets over the last three decades the book s contributors include scholars from North America and the United Kingdom who are active researchers in the perspectives covered in their particular chapter Many of the chapters work to deny earlier images of aging as involving normative decrement to provide a picture of aging as a process of development involving positive choices and providing new opportunities A recurring theme in many chapters is that of the heterogeneity of the group of people who are variously categorized as older aged elderly or over 65 The contributors review the literature analytically in a way that reveals not only current theoretical and methodological approaches to communication and aging research but also sets the future agenda This handbook will be of great interest to scholars and researchers in gerontology developmental psychology and communication and in this updated edition will continue to play a key role in the study of communication and aging
