

## Merge sort

**Merge sort** is one of the most prominent *divide-and-conquer* sorting algorithms in the modern era. It can be used to sort the values in any traversable data structure such as a list.

Merge sort works by splitting the input list into two halves, repeating the process on those halves, and finally merging the two sorted halves together.

The algorithm first moves from top to bottom, dividing the list into smaller and smaller parts until only the separate elements remain. From there, it moves back up, ensuring that the merging lists are sorted.

*Sound and Reason* Sven Hroar Klempe,2022-06-10 This book is about the human mental capacities that are mostly veiled in the use of language yet can be revealed through music activities In speech just one word is articulated at the time whereas in music different pitches sound simultaneously This conflict demonstrates that rationality must be regarded as relative as rationality in music may create chaos in speech Moreover investigating the role of sound in synesthesia reveals that its aesthetic combinations are related to the human capacity to enjoy different types of harmonies in music Drawing on new research regarding synesthesia as a more fundamental basis for human cognition this book brings this a step further by introducing synesthesia as a general metacognitive process hinting at the aesthetical origin of fundamental logical operations Bringing together a number of cultural perspectives on music language and mathematics this volume expertly illustrates that music reveals a fundamental system that deeply combines the sensorial and the intellectual human capacities **Merger**
