Cladistic Biogeography First Edition:

Cladistic Biogeography Christopher J. Humphries, Lynne R. Parenti, 1999-04-15 The distribution and classification of life on earth has long been of interest to biological theorists as well as to travellers and explorers Cladistic biogeography is the study of the historical and evolutionary relationships between species based on their particular distribution patterns across the earth Analysis of the distributions of species in different areas of the world can tell us how those species and areas are related what regions or larger groups of areas exist and what their origins might be The first edition of *Cladistic Biogeography* was published in 1986 It was a concise exposition of the history methods applications of and prospects for cladistic biogeography Well reviewed and widely used in teaching *Cladistic Biogeography* is still in demand despite having been out of print for some time This new edition draws on a wide range of examples both plant and animal from marine terrestrial and freshwater habitats It has been updated throughout with the chapters being rewritten and expanded to incorporate the latest research findings and theoretical and methodological advances in this dynamic field *Biogeography in a Changing World* Malte C. Ebach, Raymond S. Tangney, 2006-11-01 Hampered by a confusing plethora of approaches and methods biogeography is often treated as an adjunct to other areas of study The first book to fully define this rapidly emerging subdiscipline *Biogeography in a Changing World* elucidates the principles of biogeography and paves the way for its evolution into a stand alone field *Drawin Cladistics* David M. Williams, Malte C. Ebach, 2020-08-06 This new edition of a foundational text presents a contemporary review of cladistics as applied to biological classification It provides a comprehensive account of the past fifty years of discussion on the relationship between classification phylogeny and evolution It covers cladistics in the era of molecular data detailing new advances and ideas that have emerged over the last twenty five years Written in an accessible style by internationally renowned authors in the field readers are straightforwardly guided through fundamental principles and terminology Simple worked examples and easy to understand diagrams also help readers navigate complex problems that have perplexed scientists for centuries This practical guide is an essential addition for advanced undergraduates postgraduates and researchers in taxonomy systematics comparative biology evolutionary biology and molecular biology *The Reinvention of Australasian Biogeography* Malte C. Ebach, 2017 The story of the evolution of biogeographical practice in Australasia ***A Monograph of Cupressaceae and Sciadopitys*** Aljos Farjon, 2005 *A Monograph of Cupressaceae and Sciadopitys* All species from these two families are described with information on nomenclature types distribution ecology conservation cited specimens taxonomic notes and distribution maps Introductory chapters deal with history morphology and anatomy phylogeny and evolution and distribution *Study Guide for 31840 - Biology-First Edition* Neil A. Campbell, 1987 *Beyond Cladistics* David Mervyn Williams, Sandra Knapp, 2010 This multifarious volume does a splendid job of reflecting the breadth and depth of fundamental questions about the methods of systematics and biogeography from the practical applications of conservation biology to issues of wide interest to

evolutionary biologists Dr Norman I Platnick American Museum of Natural History A fun and informative volume that everyone interested in the subject will enjoy This book is full of important discussions on Botany Cladistics and Biogeography Vicki Funk National Museum of Natural History Smithsonian Institution The Branching Of A Paradigm is the intriguing theme of this volume on the myriad of ways cladistics has impacted modern biology Surprises from floristics to recent thoughts on epistemology await the reader Dennis Stevenson New York Botanical Garden **The Dinosauria** David B.

Weishampel, Peter Dodson, Halszka Osmólska, 2007-12-17 This second edition includes coverage of dinosaur systematics reproduction life history strategies biogeography taphonomy paleoecology thermoregulation extinction **Journal of Vertebrate Paleontology**, 2010 **Empire Biota: Taxonomy and Evolution 2nd Edition** Bernard Pelletier, 2016-02 A comprehensive account of taxonomy including historical overviews the first cladistic analyses of bacteria based on classical evidence the most comprehensive cladistic analyses of eukaryotes based on classical evidence cladograms tables and lists descriptions of the various groups profiles of taxonomists and coverage of classifications for lower groups evolution and fossils with edits and a chapter on ecology and biogeography and one on geological time added for this 2nd edition

Foundations of Systematics and Biogeography David M. Williams, Malte C. Ebach, 2007-11-19 Anyone interested in comparative biology or the history of science will find this myth busting work genuinely fascinating It draws attention to the seminal studies and important advances that have shaped systematic and biogeographic thinking It traces concepts in homology and classification from the 19th century to the present through the provision of a unique anthology of scientific writings from Goethe Agassiz Owen Naef Zangerl and Nelson among others **Cladistics** Ian J. Kitching, 1998 Cladistics aims to reconstruct genealogies based on common ancestry thus revealing the phylogenetic relationships between taxa Its applications vary from linguistic analysis to the study of conservation and biodiversity and it has become a method of choice for comparative studies in all fields of biology This new edition of Cladistics first published in 1992 reflects the many changes and developments which have taken place in the field over the last five years while retaining the clarity and readability that made the first edition so successful For all students interested in the systematic relationships among organisms this book provides a state of the art account of the techniques and methods of modern cladistics and of how to put them into practice

Ornithology, Evolution, and Philosophy Jürgen Haffer, 2007-08-16 This book is the first detailed biography of Ernst Mayr He was an architect of the Synthetic Theory of Evolution and the greatest evolutionary biologist since Charles Darwin influential historian and philosopher of biology outstanding taxonomist and ornithologist and naturalist He is one of the most widely known biologists of the 20th century Mayr used the theories of natural selection and population thinking as theoretical models within the framework of historical biological studies He was the first to emphasize the role of biopopulations thereby pointing out the basic difference between population thinking and typological essentialism **Time of Nature and the Nature of Time** Christophe Bouton, Philippe Huneman, 2017-05-30 This volume addresses the question

of time from the perspective of the time of nature Its aim is to provide some insights about the nature of time on the basis of the different uses of the concept of time in natural sciences Presenting a dialogue between philosophy and science it features a collection of papers that investigate the representation modeling and understanding of time as they appear in physics biology geology and paleontology It asks questions such as whether or not the notions of time in the various sciences are reducible to the same physical time what status should be given to timescale differences or what are the specific epistemic issues raised by past facts in natural sciences The book first explores the experience of time and its relation to time in nature in a set of chapters that bring together what human experience and physics enable metaphysicians logicians and scientists to say about time Next it studies time in physics including some puzzling paradoxes about time raised by the theory of relativity and quantum mechanics The volume then goes on to examine the distinctive problems and conceptions of time in the life sciences It explores the concept of deep time in paleontology and geology time in the epistemology of evolutionary biology and time in developmental biology Each scientific discipline features a specific approach to time and uses distinctive methodologies for implementing time in its models This volume seeks to define a common language to conceive of the distinct ways different scientific disciplines view time In the process it offers a new approach to the issue of time that will appeal to a wide range of readers philosophers and historians of science metaphysicians and natural scientists be they scholars advanced students or readers from an educated general audience

History and Precedent in Environmental Design Anatol Rapoport, 2013-06-29 This book is about a new and different way of approaching and studying the history of the built environment and the use of historical precedents in design However although what I am proposing is new for what is currently called architectural history both my approach and even my conclusions are not that new in other fields as I discovered when I attempted to find supporting evidence In fact of all the disciplines dealing with various aspects of the study of the past architectural history seems to have changed least in the ways I am advocating There is currently a revival of interest in the history of architecture and urban form a similar interest applies to theory vernacular design and culture environment relations After years of neglect the study of history and the use of historical precedent are again becoming important However that interest has not led to new approaches to the subject nor have its bases been examined This I try to do In so doing I discuss a more rigorous and I would argue a more valid way of looking at historical data and hence of using such data in a theory of the built environment and as precedent in environmental design Underlying this is my view of Environment Behavior Studies CEBS as an emerging theory rather than as data to help design based on current theory Although this will be the subject of another book a summary statement of this position may be useful

Faunal and Floral Migration and Evolution in SE Asia-Australasia Ian Metcalfe, Jeremy M.B. Smith, Mike Morwood, Iain Davidson, 2001-06-01 This multidisciplinary book focuses on the relationships and interactions between palaeobiogeography biogeography dispersal vicariance migrations and evolution of organisms in the SE Asia Australasian region The book

investigates biogeographic links between SE Asia and Australasia which go back more than 500 million years. It also focuses on the links between geological evolution and biological migrations and evolution in the region. It was in the SE Asian region that Alfred Russell Wallace established his biogeographic line now known as Wallace's Line, which was the beginning of biogeography. Wallace also independently developed his theory of evolution based on his work in this area. The book brings together for the first time geologists, palaeontologists, zoologists, botanists, entomologists, evolutionary biologists, and archaeologists in the one volume to relate the region's geological past to its present biological peculiarities. The book is organized into six sections. Section 1, Paleobiogeographic Background, provides overviews of the geological and tectonic evolution of SE Asia, Australasia, and changing patterns of land and sea for the last 540 million years. Section 2, Palaeozoic and Mesozoic Geology and Biogeography, discusses Palaeozoic and Mesozoic biogeography of conodonts, brachiopods, plants, dinosaurs, and radiolarians, and the recognition of ancient biogeographic boundaries or Wallace Lines in the region. Section 3, Wallace's Line, focuses on the biogeographic boundary established by Wallace, including the history of its establishment, its significance to biogeography in general, and its applicability in the context of modern biogeography. Section 4, Plant biogeography and evolution, includes discussion on primitive angiosperms, the diaspora of the southern rushes, and environmental, climatic, and evolutionary implications of plants and palynomorphs in the region. The biogeography and migration of insects, butterflies, birds, rodents, and other non-primate mammals is discussed in section 5, Non-Primates. The final section 6, Primates, focuses on the biogeographic radiation, migration, and evolution of primates and includes papers on the occurrence and migration of early hominids and the requirements for human colonization of Australia.

As a review of the status of biogeography in the West Indies in the 1980s, the first edition of *Biogeography of the West Indies: Past, Present, and Future* provided a synthesis of our current knowledge of the systematics and distribution of major plant and animal groups in the Caribbean basin. The totally new and revised Second Edition, *Biogeography of the West Indies*, David E. Fastovsky, David B. Weishampel, 2016-11-28. Fully updated, lively, and beautifully illustrated in full colour, *Dinosaurs* encourages students to ask questions and think like a scientist. *Annals of the Carnegie Museum*, Carnegie Museum, 2002.

Organizing the Green World: A Conceptual History of Botanical Classification Tod F. Stuessy, 2025-09-02. This book focuses on plant systematics and evolution with special interest on the history and philosophy of botanical classification. Tracing the history of how humans have dealt with ordering the plant world is very much a glimpse of how human culture and science have progressed over the past 2000 years. The objective in this book is to present ideas on plant classification beginning with classical Greek and Roman scholars through the Middle Ages into the Renaissance and finally to the modern 21st century. Significant quantitative methods in classification have originated within the past 70 years, which have never before been integrated with previous historical perspectives. Most textbooks of systematic botany contain an historical introduction or perhaps a chapter on the history of

classification but this book presents much greater detail on the classifications themselves and the cultural dimensions of the different time periods Biographical detail is also provided to give a better appreciation of the individual botanists who have contributed new ideas in the search for maximally predictive systems
