Noncommutative Geometry And Physics 3 - Proceedings Of The Noncommutative Geometry And Physics 2008, On K-theory And D-branes & Proceedings Of The RIMS Thematic Year 2010 On Perspectives In Deformation Quantization And Noncommutative Geometry

Giuseppe Dito, Hitoshi Moriyoshi, Toshikazu Natsume, Yoshiaki Maeda, Satoshi Watamura, Motoko Kotani, 2013-01-11

Noncommutative differential geometry is a novel approach to geometry aimed in part at applications in physics. It was founded in the early eighties by the 1982 Fields Medalist Alain Connes on the basis of his fundamental works in operator algebras. It is now a very active branch of mathematics with actual and potential applications to a variety of domains in physics ranging from solid state to quantization of gravity. The strategy is to formulate usual differential geometry in a somewhat unusual manner using in particular operator algebras and related concepts so as to be able to plug in noncommutativity in a natural way. Algebraic tools such as K theory and cyclic cohomology and homology play an important role in this field. It is an important topic both for mathematics and physics.

Field Models in Electricity and Magnetism

Paolo Di Barba, Antonio Savini, Slawomir Wiak, 2008-02-20. Covering the development of field computation in the past forty years, this book is a concise, comprehensive and up to date introduction to methods for the analysis and synthesis of electric and magnetic fields. A broad view of the subject of field models in electricity and magnetism ranging from basic theory to numerical applications is offered. The approach throughout is to solve field problems directly from partial differential equations in terms of vector quantities.

Electric and Magnetic Fields R. Belmans, A. Nicolet, 2012-12-06. This book contains the edited versions of the papers presented at the Second International Workshop on Electric and Magnetic Fields held at the Katholieke Universiteit van Leuven, Belgium, in May 1994. This Workshop deals with numerical solutions of electromagnetic problems in real life applications. The topics include coupled problems, thermal, mechanical, electric circuits, CAD/CAM applications, 3D eddy current and high frequency problems, optimisation and application oriented numerical problems. This workshop was organised jointly by the AIM Association of Engineers graduated from de Montefiore Electrical Institute together with the Departments of Electrical Engineering of the Katholieke Universiteit van Leuven, Prof. R. Belmans, the University of Gent, Prof. J. Melkebbek and the University of Liege, Prof. W. Legros. These laboratories are working together in the framework of the Pole d'Attraction Interuniversitaire Inter University Attractie Pole 51 on electromagnetic systems led by the University of Liege and the research work they perform covers most of the topics of the Workshop. One of the principal aims of this Workshop was to provide a bridge between the electromagnetic device designers, mainly industrialists, and the electromagnetic field computation developers. Therefore, this book contains a continuous spectrum of papers from application

of electromagnetic models in industrial design to presentation of new theoretical developments **Magnetism and Magnetic Materials** J. M. D. Coey, 2010-03-25 An essential textbook for graduate courses on magnetism and an important source of practical reference data
