Knight, 1970 Quantum Chemistry: Classic Scientific Papers Hinne Hetteema, 2000-03-24 Chemical physics is presently a very active field where theoretical computation and accurate experimentation have led to a host of exciting new results Among these are the possibility of state to state reactive scattering the insights in non adiabatic chemistry and from the computational perspective the use of explicitly correlated functions in quantum chemistry Many of these present day developments use ideas derivations and results that were obtained in the very early days of quantum theory in the 1920s and 1930s Much of this material is hard to study for readers not familiar with German This volume presents English translations of some of the most important papers The choice of material is made with the relevance to present day researchers in mind Included are seminal papers by M Born and J R Oppenheimer J von Neumann and E Wigner E A Hylleraas F London F Hund H A Kramers R de L Kronig and F H ckel among others *Classical Scientific Papers*, 1970 **The Making of Modern Science** David Knight, 2013-04-26 Of all the inventions of the nineteenth century the scientist is one of the most striking In revolutionary France the science student taught by men active in research was born and a generation later the graduate student doing a PhD emerged in Germany In 1833 the word scientist was coined forty years later science increasingly specialised was a becoming a profession Men of science rivalled clerics and critics as sages they were honoured as national treasures and buried in state funerals Their new ideas invigorated the life of the mind Peripatetic congresses great exhibitions museums technical colleges and laboratories blossomed and new industries based on chemistry and electricity brought prosperity and power economic and military Eighteenth century steam engines preceded understanding of the physics underlying them but electric telegraphs and motors were applied science based upon painstaking interpretation of nature The ideas discoveries and inventions of scientists transformed the world lives were longer and healthier cities and empires grew societies became urban rather than agrarian the local became global And by the opening years of the twentieth century science was spreading beyond Europe and North America and women were beginning to be visible in the ranks of scientists Bringing together the people events and discoveries of this exciting period into a lively narrative this book will be essential reading both for students of the history of science and for anyone interested in the foundations of the world as we know it today Bibliography on the History of Chemistry and Chemical Technology. 17th to the 19th Century Valentin Wehefritz, 2011-06-24 No detailed description available for Bibliography on the History of Chemistry and Chemical Technology 17th to the 19th Century **Sources for the History of Science 1660-1914** David M.
