Classics And Moderns Collected Essays On Economic Theory Volume 3:

Handbook on the History of Economic Analysis Volume I Gilbert Faccarello, Heinz D. Kurz, 2016-07-27 Volume I contains original biographical profiles of many of the most important and influential economists from the seventeenth century to the present day. These inform the reader about their lives, works, and impact on the further development of the discipline. The emphasis is on their lasting contributions to our understanding of the complex system known as the economy. The entries also shed light on the means and ways in which the functioning of this system can be improved and its dysfunction reduced. *Classics and Moderns in Economics Volume I* Peter Groenewegen, 2002-09-26 Building on the Groenewegen's respected collection of eighteenth century economics, this new book focuses on the nineteenth and early twentieth centuries and includes several essays that have never been previously published. **The Foundations of Price Theory Vol 6** Pascal Bridel, 2024-10-28 Price theory has always been and still is at the heart of economic theory. Concentrating on the primary literature, this set brings together texts of the many and often conflicting intellectual endeavours to solve this difficult economic issue. **Money, Uncertainty and Time** Giuseppe Fontana, 2008-09-11 Pt 1 Keynes: the classics and the modern Keynesian dissent. Pt 2 From rationality to unemployment and the Monetary Circuit. Pt 3 Understanding endogenous money. *Capital, Time and Transitional Dynamics* Harald Hagemann, Roberto Scazzieri, 2009-01-13 This innovative volume presents a comprehensive appraisal of John Hicks' *Capital and Time* 1973, thirty years on from its original publication. Contributors include Walter Eltis, Heinz Kurz, and Maghnad Desai. The Palgrave Companion to LSE Economics Robert A. Cord, 2019-01-18 The London School of Economics (LSE) has been and continues to be one of the most important global centres for economics. With six chapters on themes in LSE economics and 29 chapters on the lives and work of LSE economists, this volume shows how economics became established at the School, how it produced some of the world's best known economists including Lionel Robbins and Bill Phillips, plus Nobel Prize winners such as Friedrich Hayek, John Hicks, and Christopher Pissarides, and how it remains a global force for the very best in teaching and research in economics. With original contributions from a stellar cast, this volume provides economists, especially those interested in macroeconomics and the history of economic thought, with the first in-depth analysis of LSE economics. **The Purpose of Life in Economics** Lall Ramrattan, Michael Szenberg, 2022-10-19 This book is a compilation of economic views on the purpose of life. It follows a unique approach, starting with propositions from diverse fields that act as governing laws of the purpose of life in economics, then guiding the reader through the physical, philosophical, and psychological views of the purpose of life as economics and economic theories can find their roots in all these areas. The book concludes with the purpose of life presented through economic doctrines from the pre-classical to classical to neo-classical schools of economic thought through the lens of economic development and from the perspective of several religious doctrines. Wrestling with Time Martin Currie, Ian Steedman, 1990. Generations of Economists David Collard, 2012-07-26 This book focuses on the

interaction between practising economists and previous generations of economists Because economic problems such as crashes tend to recur and are only partially understood it may be profitable read the work of previous generations in a collaborative spirit Sometimes this can offer a different perspective on current preoccupations and cause us to reconsider the scope of our much criticised subject The book gathers together earlier work by the author which appeared in various academic books and journals with the addition of six new chapters The collection makes for a lively informative and thought provoking collection It will interest anyone with an interest in the history of economics and of economic thought

Philosophical Standardism Nicholas Rescher, 2014-02-25 Now in paperback Philosophical Standardism is ideal for bringing one of the field's preeminent scholars into the classroom In this novel empirical treatment of fundamental issues in philosophy Nicholas Rescher propounds an unorthodox approach to philosophical doctrines that is predicated on the idea of standardism Routledge Library Editions: The History of Economic Thought Various Authors, 2022-07-30 The volumes in this set originally published between 1925 and 1990 draw together research by leading academics in the area of the history of economic thought The volumes encompass many different schools of economic thought with a focus on individual economic thinkers such as Friedrich Hayek Adam Smith and Piero Sraffa This set will be of interest to students of economics particularly students of the history of economic thought

Markets, Money and Capital Roberto Scazzieri, Amartya Sen, Stefano Zamagni, 2008 Sir John Hicks was one of the leading economic theorists of the twentieth century jointly winning the Nobel Prize for his work in 1972 This volume addresses Hicks's intellectual heritage and discusses how his ideas suggest a distinct approach to economic theory and policy making

From Economics Imperialism to Freakonomics Ben Fine, Dimitris Milonakis, 2009-04-15 Ben Fine the author of Social Capital versus Social Theory and a renowned exponent of Marxian political economy and Dimitris Milonakis offer one of the first systematic critiques of cliometrics new institutional economics and Douglass North's work

Essays on: The Nature and State of Modern Economics Tony Lawson, 2015-04-17 What do modern academic economists do What currently is mainstream economics What is neoclassical economics And how about heterodox economics How do the central concerns of modern economists whatever their associations or allegiances relate to those traditionally taken up in the discipline And how did economics arrive at its current state These and various cognate questions and concerns are systematically pursued in this new book by Tony Lawson The result is a collection of previously published and new papers distinguished in providing the only comprehensive and coherent account of these issues currently available The financial crisis has not only revealed weaknesses of the capitalist economy but also highlighted just how limited and impoverished is modern academic economics Despite the failings of the latter being more widely acknowledged now than ever there is still an enormous amount of confusion about their source and true nature In this collection Tony Lawson also identifies the causes of the discipline's failings and outlines a transformative solution to its deficiencies Amongst other things Lawson advocates for the adoption of a more historical and philosophical orientation to the

study of economics one that deemphasizes the current focus on mathematical modelling while maintaining a high level of analytical rigour In so doing Lawson argues for a return to long term systematic and sustained projects in the manner pursued by the likes of Marx Veblen Hayek and Keynes concerned first and foremost with advancing our understanding of social reality Overall this forceful and persuasive collection represents a major intervention in the on going debates about the nature state and future direction of economics *The Constitution of Political Economy* Adrian Pabst,Roberto

Scazzieri,2023-08-17 The two dominant conceptions of political economy are based on either reducing political decisions to rational choice reasoning or conversely reducing economic structures and phenomena to the realm of politics In this book Adrian Pabst and Roberto Scazzieri contend that neither conception is convincing and argue for a fundamental rethinking of political economy Developing a new approach at the interface of economic theory and political thought the book shows that political economy covers a plurality of dimensions which reflect internal hierarchies and multiple relationships within the economic and political sphere The Constitution of Political Economy presents a new richer conception of political economy that draws on a range of thinkers from the history of political economy recognising the complex embedding of the economy and the polity in society Effective policy making has to reflect this embedding and rests on the interdependence between local national and international actors to address multiple systemic crises *Economic Thought Since Keynes* Michel

Beaud,Gilles Dostaler,2005-09-27 Economic Thought Since Keynes provides a concise overview of changing economic thought in the latter part of the twentieth century Offering a concise biography of 150 influential economists since Keynes it is an invaluable reference tool *Computable Foundations for Economics* K. Vela Velupillai,2012-07-26 Computable

Foundations for Economics is a unified collection of essays some of which are published here for the first time and all of which have been updated for this book on an approach to economic theory from the point of view of algorithmic mathematics By algorithmic mathematics the author means computability theory and constructive mathematics This is in contrast to orthodox mathematical economics and game theory which are formalised with the mathematics of real analysis underpinned by what is called the ZFC formalism i e set theory with the axiom of choice This reliance on ordinary real analysis and the ZFC system makes economic theory in its current mathematical mode completely non algorithmic which means it is numerically meaningless The book provides a systematic attempt to dissect and expose the non algorithmic content of orthodox mathematical economics and game theory and suggests a reformalization on the basis of a strictly rigorous algorithmic mathematics This removes the current schizophrenia in mathematical economics and game theory where theory is entirely divorced from algorithmic applicability for experimental and computational exercises The chapters demonstrate the uncomputability and non constructivity of core areas of general equilibrium theory game theory and recursive macroeconomics The book also provides a fresh look at the kind of behavioural economics that lies behind Herbert Simon s work and resurrects a role for the noble classical traditions of induction and verification viewed and formalised now

algorithmically It will therefore be of particular interest to postgraduate students and researchers in algorithmic economics game theory and classical behavioural economics
