## **Classification And Regression Trees:**

**Classification and Regression Trees** Leo Breiman,Jerome Friedman,R.A. Olshen,Charles J. Stone,2017-10-19 The methodology used to construct tree structured rules is the focus of this monograph Unlike many other statistical procedures which moved from pencil and paper to calculators this text s use of trees was unthinkable before computers Both the practical and theoretical sides have been developed in the authors study of tree methods Classification and Regression Trees reflects these two sides covering the use of trees as a data analysis method and in a more mathematical framework proving some of their fundamental properties

**Classification and Regression Trees** Leo Breiman,1998 Classification and Regression Trees Leo Breiman,Jerome H. Friedman,Richard A. Olshen,Charles J. Stone,Regression trees,1984 *Using Classification and Regression Trees* Xin Ma,2018-04-01 Classification and regression trees CART is one of the several contemporary statistical techniques with good promise for research in many academic fields There are very few books on CART especially on applied CART This book as a good practical primer with a focus on applications introduces the relatively new statistical technique of CART as a powerful analytical tool The easy to understand non technical language and illustrative graphs tables as well as the use of the popular statistical software program SPSS appeal to readers without strong statistical background This book helps readers understand the foundation the operation and the interpretation of CART analysis thus becoming knowledgeable consumers and skillful users of CART The chapter on advanced CART procedures not yet well discussed in the literature allows readers to effectively seek further empowerment of their research designs by extending the analytical power of CART to a whole new level This highly practical book is specifically written for academic researchers data analysts and graduate students in many disciplines such as economics social sciences medical sciences and sport sciences who do not have strong statistical background but still strive to take full advantage of CART as a powerful analytical tool for research in their fields

Classification and Regression Trees, CART Yisehac Yohannes,Patrick Webb,1999-01-01 **Classification and Regression Trees Regression Trees** Leo Breiman,1984 Decision Trees and Their Application for Classification and Regression Problems Obinna Chilezie Njoku,2019 Tree methods are some of the best and most commonly used methods in the field of statistical learning They are widely used in classification and regression modeling This thesis introduces the concept and focuses more on decision trees such as Classification and Regression Trees CART used for classification and regression predictive modeling problems We also introduced some ensemble methods such as bagging random forest and boosting These methods were introduced to improve the performance and accuracy of the models constructed by classification and regression tree models This work also provides an in depth understanding of how the CART models are constructed the algorithm behind the construction and also using cost complexity approaching in tree pruning for regression trees and classification error rate approach used for pruning classification trees We took two real life examples which we used to solve classification problem such as classifying the type of cancer based on tumor type size and

other parameters present in the dataset and regression problem such as predicting the first year GPA of a college student based on high school GPA SAT scores and other parameters present in the dataset      **Data Mining** Florin

Gorunescu,2011-03-10 The knowledge discovery process is as old as Homo sapiens Until some time ago this process was solely based on the natural personal computer provided by Mother Nature Fortunately in recent decades the problem has begun to be solved based on the development of the Data mining technology aided by the huge computational power of the artificial computers Digging intelligently in different large databases data mining aims to extract implicit previously unknown and potentially useful information from data since knowledge is power The goal of this book is to provide in a friendly way both theoretical concepts and especially practical techniques of this exciting field ready to be applied in real world situations Accordingly it is meant for all those who wish to learn how to explore and analysis of large quantities of data in order to discover the hidden nugget of information      *Classification and Regression Trees* Jussi Klemelä,Sigbert Klinke,Hizir

Sofyan,2005      **Evolutionary Decision Trees in Large-Scale Data Mining** Marek Kretowski,2019-06-05 This book presents a unified framework based on specialized evolutionary algorithms for the global induction of various types of classification and regression trees from data The resulting univariate or oblique trees are significantly smaller than those produced by standard top down methods an aspect that is critical for the interpretation of mined patterns by domain analysts The approach presented here is extremely flexible and can easily be adapted to specific data mining applications e g cost sensitive model trees for financial data or multi test trees for gene expression data The global induction can be efficiently applied to large scale data without the need for extraordinary resources With a simple GPU based acceleration datasets composed of millions of instances can be mined in minutes In the event that the size of the datasets makes the fastest memory computing impossible the Spark based implementation on computer clusters which offers impressive fault tolerance and scalability potential can be applied      **Generalized Linear Models and Extensions** M. Ataharul Islam,Soma

Chowdhury Biswas,2025-04-30 This book presents a wide range of topics to address the needs of several groups of users of rapidly growing methods of generalized linear models Since the introduction of the idea of generalized linear models GLM in early seventies during the past four decades the modelling of statistical data have experienced a major transformation from linear models based on normality assumption to a more flexible unified approach of generalized linear models The number of readers and users of generalized linear models have increased manifold In addition the use of generalized linear models has expanded in many new fields of applications where statistical models are being employed at an increasing rate It is important to note here that the learners and users of GLM have a widely varied background in different disciplines Considering these pressing needs this book focuses on i upper undergraduate and graduate level students in need of a thorough understanding about the basic concepts of generalized linear models along with appropriate applications ii researchers and users in need of advanced generalized linear models for analysing bivariate or multivariate data stemming from longitudinal or repeated

measures data and iii new challenges to analyse big data where the traditional techniques fail to provide any reasonable modelling strategy In other words this book starts with a thorough background of the generalized linear models for the new learners then provides multivariate extensions to advanced level techniques for researchers and users in various disciplines and finally some innovative modelling strategies are introduced using generalized linear models in the emerging field of big data analytics It provides materials for new learners for users researchers who are in need of more advanced techniques and also strategies for employing linear models in big data analytics Hence techniques of generalized linear models will be presented in the proposed book covering the needs of new learners users of advanced techniques researchers in need of statistical modelling of any data type and users of big data analytics wanting to increase predictive accuracy of classification and regression tree techniques      On Using Classification and Regression Trees in Machine Learning David Scott
