A journey into the vibrant and intriguing world of mathematics education. *Teaching Mathematics in Grades 6-12* explores how research in mathematics education can inform teaching practice in grades 6-12. The author shows secondary mathematics teachers the value of being a researcher in the classroom by constantly experimenting with methods for developing students' mathematical thinking and then connecting this research to practices that enhance students' understanding of the material. The chapters in Part I introduce secondary teachers to the field of mathematics education with cross-cutting issues that apply to teaching and learning in all mathematics content areas. The chapters in Part II are devoted to specific mathematics content strands and describe how students think about mathematical concepts. The goal of the text is to have secondary math teachers gain a deeper understanding of the types of mathematical knowledge their students bring to grade 6-12 classrooms and how students' thinking may develop in response to different teaching strategies.

The Sociogenesis

of Language and Human Conduct Bruce Bain, 2013-11-11 Michael Cole To the unwary reader even the table of contents of this book will appear incongruous. What notion let alone set of principles could bring coherence to the following concepts: playing peekaboo with small children, aging, human alienation, conversations with Uzbeki peasants, toolmaking, sexism, the world of the deaf, the ecology of hunting groups. After she has had a chance to scan the entire set, the reader can see that this book seems to center on language. But it clearly is not a book about linguistics. It is about a notion that combines two other notions that we usually find located in very different kinds of books: language and human nature. There is no widely accepted term for this combined notion. It does not fit into those ways of thinking of the world that have gotten us where we are. Walker Percy, philosopher, novelist, succinctly nails the source of our problem. The importance of a study of language as opposed to a scientific study of a space-time event like a solar eclipse or rat behavior is that as soon as one scratches the surface of the familiar and comes face to face with the nature of language, one also finds himself face to face with the nature of man. 1975 p 10. Once we reinvent this insight, its implications begin to work into our lives; our central problem becomes to figure out how to deal with the dilemmas it implies.
