Artificial Intelligence A Modern Approach Eastern Economy Edition:

The Descent of Artificial Intelligence Kevin Padraic Donnelly, 2024-07-15 The idea that a new technology could challenge human intelligence is as old as the warning from Socrates and Plato that written language eroded memory With the emergence of generative artificial intelligence programs we find ourselves once again debating how a new technology might influence human thought and behavior Researchers software developers and visionary tech writers even imagine an AI that will equal or surpass human intelligence adding to a sense of technological determinism where humanity is inexorably shaped by powerful new machines But among the hundreds of essays books and movies that approach the question of AI few have asked how exactly scientists and philosophers have codified human thought and behavior Rather than focusing on technical contributions in machine building *The Descent of Artificial Intelligence* explores a more diverse cast of thinkers who helped to imagine the very kind of human being that might be challenged by a machine Kevin Padraic Donnelly argues that what we often think of as the goal of AI has in fact been shaped by forgotten and discredited theories about people and human nature as much as it has been by scientific discoveries mathematical advances and novel technologies By looking at the development of artificial intelligence through the lens of social thought Donnelly deflates the image of artificial intelligence as a technological monolith and reminds readers that we can control the narratives about ourselves

It's Only Human Armin W. Schulz, 2025 What makes humans cognitively unique and why are we unique in these ways Armin W Schulz suggests that the singularity of our ways of thinking is based in a positive feedback loop that joins innate representations forms of cultural learning and technology This feedback loop explains a number of key applications of our cognitive abilities from our industriousness through trade our conceptions of morality and our ability to engage with the thoughts of others Discussing the evolution of human cognition is complicated by the fact that it must be recognized to be multi dimensional culturally variable and only differing in degree from non human cognition Taking this complexity into account Schulz develops an interactionist theory of the evolution and nature of distinctively human cognition At the core of this theory is the idea that underlying human cognitive uniqueness is a complex interlocking interplay between three different elements 1 a set of evolved representational expectations 2 a pronounced disposition for cultural learning and 3 complex and variegated technology All three are further underwritten by a unique set of lower level cognitive abilities which are in turn influenced by the feedback loop created by the major three With the help of this feedback loop key examples of uniquely human cognition can be explained distinctively human mindreading distinctively human moral cognition and the distinctively human propensity for trade Schulz concludes with an application of this interactionist theory of distinctively human cognition to some issues of contemporary importance the relationship between distinctively human cognition and increasingly sophisticated artificial intelligence the role of religion in human thought and action and the relationship between extensive patent regimes and human innovation It s Only Human makes clear how human cognition can end up differing quite markedly from non human cognition even though its individual elements might initially and intrinsically only differ in relatively small degrees
