Computer Science Department, 1968 First a method of representing heuristics as production rules is developed which facilitates dynamic manipulation of the heuristics by the program embodying them This representation technique permits separation of the heuristics from the program proper provides clear identification of individual heuristics is compatible with generalization schemes and expedites the process of obtaining decisions from the system Second procedures are developed which permit a problem solving program employing heuristics in production rule form to learn to improve its performance by evaluating and modifying existing heuristics and hypothesizing new ones either during a special training process or during normal program operation Third the abovementioned representation and learning techniques are reformulated in the light of existing stimulus response theories of learning and five different S R models of human heuristic learning in problem solving environments are constructed and examined in detail Experimental designs for testing these information processing models are also proposed and discussed Finally the feasibility of using the aforementioned

representation and learning techniques in a complex problem solving situation is demonstrated by applying these techniques to the problem of making the bet decision in draw poker This application involving the construction of a computer program demonstrates that few production rules or training trials are needed to produce a thorough and effective set of heuristics for draw poker Author **Advanced Topics in Artificial Intelligence** Norman Foo,2007-12-07 The 12th Australian Joint Conference on Artificial Intelligence AI QQ held in Sydney Australia 6 10 December 1999 is the latest in a series of annual regional meetings at which advances in artificial intelligence are reported This series now attracts many international papers and indeed the constitution of the program committee reflects this geographical diversity Besides the usual tutorials and workshops this year the conference included a companion symposium at which papers on industrial applications were presented The symposium papers have been published in a separate volume edited by Eric Tsui Ar99 is organized by the University of New South Wales and sponsored by the Australian Computer Society the Commonwealth Scientific and Industrial Research Organisation CSIRO Computer Sciences Corporation the KRRU group at Griffith University the Australian Artificial Intelligence Institute and Neuron Works Ltd Ar99 received over 120 conference paper submissions of which about a third were from outside Australia From these 39 were accepted for regular presentation and a further 15 for poster display These proceedings contain the full regular papers and extended summaries of the poster papers All papers were refereed mostly by two or three reviewers selected by members of the program committee and a list of these reviewers appears later The technical program comprised two days of workshops and tutorials followed by three days of conference and symposium plenary and paper sessions *Artificial Intelligence Research in the Heuristic Programming Project*

Algorithms for Games Georgy M. Adelson-Velsky,Vladimir L. Arlazarov,M.V. Donskoy,2012-12-06 Algorithms for Games aims to provide a concrete example of the programming of a two person game with complete information and to demonstrate some of the methods of solutions to show the reader that it is profitable not to fear a search but rather to undertake it in a

rational fashion make a proper estimate of the dimensions of the catastrophe and use all suitable means to keep it down to a reasonable size The book is dedicated to the study of methods for limiting the extent of a search The game programming problem is very well suited to the study of the search problem and in general for multi step solution processes With this in mind the book focuses on the programming of games as the best means of developing the ideas and methods presented While many of the examples are related to chess only an elementary knowledge of the game is needed The Handbook of Artificial Intelligence Avron Barr,Edward A. Feigenbaum,2014-05-12 The Handbook of Artificial Intelligence Volume I focuses on the progress in artificial intelligence AI and its increasing applications including parsing grammars and search methods The book first elaborates on AI AI handbook and literature problem representation search methods and sample search programs The text then ponders on representation of knowledge including survey of representation techniques and representation schemes The manuscript explores understanding natural languages as well as machine translation grammars parsing test generation and natural language processing systems The book also takes a look at understanding spoken language including systems architecture and the ARPA SUR projects The text is a valuable source of information for computer science experts and researchers interested in pursuing further research in artificial intelligence Heuristic Programming in Artificial Intelligence David N.
