Artificial Life The Virtual Image:

Virtual Worlds Jean-Claude Heudin, 2003-05-20 1 Introduction Imagine a virtual world with digital creatures that looks like real life sounds like real life and even feels like real life Imagine a virtual world not only with nice three dimensional graphics and animations but also with realistic physical laws and forces This virtual world could be familiar reproducing some parts of our reality or unfamiliar with strange physical laws and artificial life forms As a researcher interested in the sciences of complexity the idea of a conference about virtual worlds emerged from frustration In the last few years there has been an increasing interest in the design of artificial environments using image synthesis and virtual reality The emergence of industry standards such as VRML 1 is an illustration of this growing interest At the same time the field of Artificial Life has addressed and modeled complex phenomena such as self organization reproduction development and evolution of artificial life like systems 2 One of the most popular works in this field has been *Tierra* designed by Tom Ray an environment producing synthetic organisms based on a computer metaphor of organic life in which CPU time is the energy resource and memory is the material resource 3 Memory is organized into informational patterns that exploit CPU time for self replication Mutation generates new forms and evolution proceeds by natural selection as different creatures compete for CPU time and memory space

Virtual Art Oliver Grau, 2004-09-17 An overview of the art historical antecedents to virtual reality and the impact of virtual reality on contemporary conceptions of art Although many people view virtual reality as a totally new phenomenon it has its foundations in an unrecognized history of immersive images Indeed the search for illusionary visual space can be traced back to antiquity In this book Oliver Grau shows how virtual art fits into the art history of illusion and immersion He describes the metamorphosis of the concepts of art and the image and relates those concepts to interactive art interface design agents telepresence and image evolution Grau retells art history as media history helping us to understand the phenomenon of virtual reality beyond the hype Grau shows how each epoch used the technical means available to produce maximum illusion He discusses frescoes such as those in the Villa dei Misteri in Pompeii and the gardens of the Villa Livia near Prima Porta Renaissance and Baroque illusion spaces and panoramas which were the most developed form of illusion achieved through traditional methods of painting and the mass image medium before film Through a detailed analysis of perhaps the most important German panorama Anton von Werner's 1883 *The Battle of Sedan* Grau shows how immersion produced emotional responses He traces immersive cinema through Cinerama Sensorama Expanded Cinema 3D Omnimax and IMAX and the head mounted display with its military origins He also examines those characteristics of virtual reality that distinguish it from earlier forms of illusionary art His analysis draws on the work of contemporary artists and groups ART COM Maurice Benayoun Charlotte Davies Monika Fleischmann Ken Goldberg Agnes Hegedues Eduardo Kac Knowbotic Research Laurent Mignonneau Michael Naimark Simon Penny Daniela Plewe Paul Sermon Jeffrey Shaw Karl Sims Christa Sommerer and Wolfgang Strauss Grau offers not just a history of illusionary space but also a theoretical framework for

analyzing its phenomenologies functions and strategies throughout history and into the future The Art and Films of Lynn Hershman Leeson Meredith Tromble, 2005-12-05 Contents of accompanying DVD ROM on p 221 of text **Virtual Realism** Michael Heim, 2000-04-13 Virtual reality has introduced what is literally a new dimension of reality to daily life But it is not without controversy Indeed some say that a collision is inevitable between those passionately involved in the computer industry and those increasingly alienated from and often replaced by its applications Opinions range from the cyberpunk attitude of Wired magazine and Bill Gates's commercial optimism to the violent opposition of the Unabomber Now with Virtual Realism readers have a thought provoking guide to the cyberspace backlash debate and the implications of cyberspace for our culture Michael Heim offers a comprehensive introduction to virtual reality and a provocative commentary on its present and future impact on our lives Heim describes the fascinating and important industrial and military uses of virtual reality as well as its artistic and entertainment applications He argues that we must balance the idealist's enthusiasm for computerized life with the need to ground ourselves more deeply in primary reality This uneasy balance he calls virtual realism **Virtual Futures** Joan Broadhurst Dixon, Eric Cassidy, 2005-07-20 Explores the idea that the future lies in its ability to articulate the consequences of an increasingly synthetic and virtual world **Christa Sommerer & Laurent Mignonneau** Karin Ohlenschlager, Peter Weibel, Alfred Weidinger, 2023-02-07 More than a cabinet of curiosities more than a terrarium more than an aquarium a captivating look at thirty years of artistic work by the Austrian French artist duo Christa Sommerer and Laurent Mignonneau Working at the intersection of natural science technology and art Austrian French artist duo Christa Sommerer and Laurent Mignonneau pioneered the Art of Interface innovative technical interfaces that enable physical interaction between simulative visual worlds and the world of natural sensory organs Early on the pair used algorithms to represent not only forms of the living but also their evolution and growth Edited by Karin Ohlenschlager Peter Weibel and Alfred Weidinger this publication in the Leonardo book series brings together key works of the artists since the early 1990s in pictures and text contextualized by renowned international authors Reinhard Kannonier Ryszard W Kluszczyński Birgit Mersmann Tomoe Moriyama Karin Ohlenschlager Ingeborg Reichle and Siegfried Zielinski In the artists installations which are possible only through interactions with the viewer devices designed by the artist couple produce novel virtual realities and immersive environments In Portrait on the Fly for instance a viewer stands in front of an interactive plasma screen behind which a swarm of thousands of flies is moving Gradually the flies settle on the shadowed areas of the projection thereby collectively reproducing the person's likeness Works such as these now almost classics of digital art open a new horizon in which artworks can function as living systems As Peter Weibel writes their work is more than a cabinet of curiosities more than a terrarium more than an aquarium it shows mythical creatures artificial creatures and a so far unseen panorama of imagination and technical ingenuity *Virtual Geographies* Mike Crang, Phil Crang, Jon May, 2013-04-15 This book examines the interrelationship between telecommunications and tourism in shaping the

nature of space place and the urban at the end of the twentieth century They discuss how these agents are instrumental in the production of homogenous world spaces and how these in turn presuppose new kinds of political and cultural identity Virtual Geographies explores how new communication technologies are being used to produce new geographies and new types of space Leading contributors from a wide range of disciplines including geography sociology philosophy and literature investigate how visions of cyberspace have been constructed offer a critical assessment of the status of virtual environments and geographies explore how virtual environments reshape the way we think and write about the world This book sets recent technological developments in a historical and geographical perspective to offer a clearer view of the new vistas ahead

Building Intelligent Interactive Tutors Beverly Park Woolf, 2010-07-28 Building Intelligent Interactive Tutors discusses educational systems that assess a student's knowledge and are adaptive to a student's learning needs The impact of computers has not been generally felt in education due to lack of hardware teacher training and sophisticated software and because current instructional software is neither truly responsive to student needs nor flexible enough to emulate teaching Dr Woolf taps into 20 years of research on intelligent tutors to bring designers and developers a broad range of issues and methods that produce the best intelligent learning environments possible whether for classroom or life long learning The book describes multidisciplinary approaches to using computers for teaching reports on research development and real world experiences and discusses intelligent tutors web based learning systems adaptive learning systems intelligent agents and intelligent multimedia It is recommended for professionals graduate students and others in computer science and educational technology who are developing online tutoring systems to support e learning and who want to build intelligence into the system Combines both theory and practice to offer most in depth and up to date treatment of intelligent tutoring systems available Presents powerful drivers of virtual teaching systems including cognitive science artificial intelligence and the Internet Features algorithmic material that enables programmers and researchers to design building components and intelligent systems

Vision-based Pedestrian Protection Systems for Intelligent Vehicles David Gerónimo, Antonio M. López, 2013-08-31 Pedestrian Protection Systems PPSs are on board systems aimed at detecting and tracking people in the surroundings of a vehicle in order to avoid potentially dangerous situations These systems together with other Advanced Driver Assistance Systems ADAS such as lane departure warning or adaptive cruise control are one of the most promising ways to improve traffic safety By the use of computer vision cameras working either in the visible or infra red spectra have been demonstrated as a reliable sensor to perform this task Nevertheless the variability of human's appearance not only in terms of clothing and sizes but also as a result of their dynamic shape makes pedestrians one of the most complex classes even for computer vision Moreover the

unstructured changing and unpredictable environment in which such on board systems must work makes detection a difficult task to be carried out with the demanded robustness In this brief the state of the art in PPSs is introduced through the review of the most relevant papers of the last decade A common computational architecture is presented as a framework to organize each method according to its main contribution More than 300 papers are referenced most of them addressing pedestrian detection and others corresponding to the descriptors features pedestrian models and learning machines used In addition an overview of topics such as real time aspects systems benchmarking and future challenges of this research area are presented

Theorizing Images Žarko Paić,2016-04-26 This book uncovers an underlying dispute over the role images play in contemporary society and consequently over their values and purposes Two decades after the concepts of the pictorial and the iconic turn changed our vernacular involvement with regard to images it has become clear that it was not only a newly discovered social political or sexual construction of the visual field that brought turbulence into disciplinary knowledge but that images have their own pictorial logic with powers exceeding those that are purely iconic or visually discernible Instead of underscoring previously defined concepts of the picture the contributors to this book view visual studies and Bildwissenschaft merely as a place for the theory of images making a case for the hotly debated topic of their powers and weaknesses on the one hand and of their respective theories on the other Therefore as the title indicates this book theorizes images but it does not present a theory of images because visual studies cannot lead to a unified theory of images unless a unified ontology of images can be agreed upon first Although that would be a different task altogether all the contributions in this book in different ways and at different paces by theorizing images in their aesthetic historical media and technological guises pave the way for the future of visual culture and for the image science that will make this future more comprehensible

Security in Virtual Worlds, 3D Webs, and Immersive Environments: Models for Development, Interaction, and Management Rea, Alan,2010-11-30 Although one finds much discussion and research on the features and functionality of Rich Internet Applications RIAs the 3D Web Immersive Environments e g MMORPGs and Virtual Worlds in both scholarly and popular publications very little is written about the issues and techniques one must consider when creating deploying interacting within and managing them securely Security in Virtual Worlds 3D Webs and Immersive Environments Models for Development Interaction and Management brings together the issues that managers practitioners and researchers must consider when planning implementing working within and managing these promising virtual technologies for secure processes and initiatives This publication discusses the uses and potential of these virtual technologies and examines secure policy formation and practices that can be applied specifically to each

Virtual Storytelling. Using Virtual Reality Technologies for Storytelling Olivier Balet, Gerard Subsol, Patrice Torguet,2003-06-30 The story is the richest heritage of human civilizations One can imagine the rst stories being told several

thousand centuries ago by wise old men huddled around camp fires. Since this time the narrative process has been considerably developed and enriched. Sounds and music have been added to complement the speech while scenery and theatrical sets have been created to enhance the story environment. Actors, dancers and technicians have replaced the lone storyteller. The story is no longer the sole preserve of oral narrative but can be realized in book, theatrical dance or movie form. Even the audience can extend up to several million individuals. And yet in its many forms the story lies at the heart of one of the world's most important industries. The advent of the digital era has enhanced and accelerated this evolution. Image synthesis, digital special effects, new Human-Computer interfaces and the Internet allow one not only to realize more sophisticated narrative forms but also to create new concepts such as video gaming and virtual environments. The art of storytelling is becoming evermore complex. Virtual reality offers new tools to capture and to interactively modify the imaginary environment in ever more intuitive ways coupled with a maximum sensory feedback. In fact, virtual reality technologies offer enhanced and exciting production possibilities for the creation and non-linear manipulation in real time of almost any story form. This has led to the new concept of Virtual Storytelling.

The Art of Art History Donald Preziosi, 2009-02-26. What is art history? Why, how and where did it originate and how have its methods changed over time? The history of art has been written and rewritten since classical antiquity. Since the foundation of the modern discipline of art history in Germany in the late eighteenth century, debates about art and its histories have intensified. Historians, philosophers, psychologists and anthropologists among others have changed our notions of what art history has been and might be. This anthology is a guide to understanding art history through critical reading of the field's most innovative and influential texts focusing on the past two centuries. Each section focuses on a key issue: art as history, aesthetics, form, content and style, anthropology, meaning and interpretation, authorship and identity and the phenomenon of globalization. More than thirty readings from writers as diverse as Winckelmann, Kant, Mary Kelly and Michel Foucault are brought together with editorial introductions to each topic providing background information, bibliographies and critical elucidations of the issues at stake. This updated and expanded edition contains sixteen newly included extracts from key thinkers in the history of art from Giorgio Vasari to Walter Benjamin and Satya Mohanty, a new section on globalization and also a new concluding essay from Donald Preziosi on the tasks of the art historian today.

Frontiers of Human-Centered Computing, Online Communities and Virtual Environments Rae Earnshaw, Richard Guedj, Andries Van Dam, John Vince, 2012-12-06. Rae Earnshaw and John A Vince __ 1 Introduction. The US President's Information Technology Advisory Committee (PITAC) recently advised the US Senate of the strategic importance of investing in IT for the 21st century, particularly in the areas of software, human-computer interaction, scalable information infrastructure, high-end computing and socioeconomic issues. 1 Research frontiers of human-computer interaction include the desire that interaction be more centered around human needs and capabilities and that the human environment be considered in virtual environments and in other contextual information.

processing activities The overall goal is to make users more effective in their information or communication tasks by reducing learning times speeding performance lowering error rates facilitating retention and increasing subjective satisfaction Improved designs can dramatically increase effectiveness for users who range from novices to experts and who have diverse cultures with varying educational backgrounds Their lives could be made more satisfying their work safer their learning easier and their health better

Architecture and Mathematics from Antiquity to the Future Kim

Williams, Michael J.
