Artificial Neural Networks V. Rao Vemuri, V. Vemuri, 1988 This volume provides an introduction to the field of artificial neural networks and their role in the emerging field of neurocomputing and the theoretical concepts that are the focus of current research The genesis of this subject can be traced back to the 1940s while present interest is due to recent developments in theoretical models technologies and algorithms The papers selected for this volume were published primarily in IEEE journals

Neural Networks and Micromechanics Ernst Kussul, Tatiana Baidyk, Donald C. Wunsch, 2009-12-01 Micromechanical manufacturing based on microequipment creates new possibilities in goods production If microequipment sizes are comparable to the sizes of the microdevices to be produced it is possible to decrease the cost of production drastically The main components of the production cost material energy space consumption equipment and maintenance decrease with the scaling down of equipment sizes To obtain really inexpensive production labor costs must be reduced to almost zero For this purpose fully automated microfactories will be developed To create fully automated microfactories we propose using artificial neural networks having different structures The simplest perceptron like neural network can be used at the lowest levels of microfactory control systems Adaptive Critic Design based on neural network models of the microfactory objects can be used for manufacturing process optimization while associative projective neural networks and networks like ART could be used for the highest levels of control systems We have examined the performance of different neural networks in traditional image recognition tasks and in problems that appear in micromechanical manufacturing We and our colleagues also have developed an approach to microequipment creation in the form of sequential generations Each subsequent generation must be of a smaller size than the previous ones and must be made by previous generations Prototypes of first generation microequipment have been developed and assessed

Intelligent and Soft Computing in Infrastructure Systems Engineering
Kasthurirangan Gopalakrishnan, Halil Ceylan, Nii O. Attah-Okine, 2009-11-23 The term soft computing applies to variants of and combinations under the four broad categories of evolutionary computing neural networks fuzzy logic and Bayesian statistics Although each one has its separate strengths the complementary nature of these techniques when used in combination hybrid makes them a powerful alternative for solving complex problems where conventional mathematical methods fail The use of intelligent and soft computing techniques in the field of geotechnical and pavement engineering has steadily increased over the past decade owing to their ability to admit approximate reasoning imprecision uncertainty and partial truth Since real life infrastructure engineering decisions are made in ambiguous environments that require human expertise the application of soft computing techniques has been an attractive option in pavement and geomechanical modeling The objective of this carefully edited book is to highlight key recent advances made in the application of soft computing techniques in pavement and geotechnical systems Soft computing techniques discussed in this book include but are not limited to neural networks evolutionary computing swarm intelligence probabilistic modeling kernel machines knowledge discovery and data mining neuro fuzzy systems and hybrid approaches Highlighted application areas include infrastructure materials modeling pavement analysis and design rapid interpretation of nondestructive testing results porous asphalt concrete distress modeling model parameter identification pavement engineering inversion problems soil grade soils characterization and backcalculation of pavement layer thickness and moduli

Towards a Theoretical Neuroscience: from Cell Chemistry to Cognition L Andrew Coward, 2013-08-23 The book explains how to understand cognition in terms of brain anatomy physiology and chemistry using an approach adapted from techniques for understanding complex electronic systems These techniques create hierarchies of information process based descriptions on different levels of detail where higher levels contain less information and can therefore describe complete cognitive phenomena but are more approximate The nature of the approximations are well understood and more approximate higher level descriptions can therefore be mapped to more precise detailed descriptions of any part of a phenomenon as required Cognitive phenomena the anatomy and connectivity of major brain structures neuron physiology and cellular chemistry are reviewed Various cognitive tasks are described in terms of information processes performed by different major anatomical structures These higher level descriptions are selectively mapped to more detailed physiological and chemical levels

Artificial Neural Networks for

Intelligent Manufacturing C.H. Dagli, 2012-12-06 The quest for building systems that can function automatically has attracted a lot of attention over the centuries and created continuous research activities As users of these systems we have never been satisfied and demand more from the artifacts that are designed and manufactured The current trend is to build autonomous systems that can adapt to changes in their environment While there is a lot to be done before we reach this point it is not possible to separate manufacturing systems from this trend The desire to achieve fully automated manufacturing systems is here to stay Manufacturing systems of the twenty first century will demand more flexibility in product design process planning scheduling and process control This may well be achieved through integrated software and hardware architectures that generate current decisions based on information collected from manufacturing systems environment and execute these decisions by converting them into signals transferred through communication network Manufacturing technology has not yet reached this state However the urge for achieving this goal is transferred into the term Intelligent Systems that we started to use more in late 1980s Knowledge based systems our first efforts in this endeavor were not sufficient to generate the Intelligence required our quest still continues Artificial neural network technology is becoming an integral part of intelligent manufacturing systems and will have a profound impact on the design of autonomous engineering systems over the next few years

Social Evolution, Political Psychology, and the Media in Democracy Peter Beattie, 2018-12-13 This book analyzes why we believe what we believe about politics and how the answer affects the way democracy functions It does so by applying social evolution theory to the relationship between the news media and politics using the United States as its primary example This includes a critical review and integration of the insights of a broad array of research from evolutionary theory and political psychology to the political economy of media The result is an empirically driven political theory on the media's role in democracy what role it currently plays what role it should play and how it can be reshaped to be more

appropriate for its structural role in democracy **Recent Theories of Human Development** R. Murray Thomas,2001
Intended as supplemental reading in courses on theories of development this book augments traditional core texts by providing students with more depth on about two dozen recent and emerging theories that have appeared over the past 20 years This period has seen a decline of the traditional grand theories that attempt to apply to all people all the time in favor of micro theories that focus more on individual differences so a book like this actually points the way toward the future rather than dryly reviewing the past In addition the author inspects the changing ways in which the concept of theory itself has been interpreted during this period and he concludes with a chapter suggesting future directions **Scattering Theory And Biomedical Engineering Modelling And Applications - Proceedings Of The 4th International Workshop**
George Dassios,Dimitrios I Fotiadis,K Kiriaki,Christos V Massalas,2000-10-09 This book addresses issues of scattering theory and biomedical engineering as well as methodological approaches and tools from related scientific areas such as applied mathematics mechanics numerical analysis and signal and image processing
