Geophysical Applications of Artificial Neural Networks and Fuzzy Logic W. Sandham, M. Leggett, 2013-06-29 The past fifteen years has witnessed an explosive growth in the fundamental research and applications of artificial neural networks ANNs and fuzzy logic FL The main impetus behind this growth has been the ability of such methods to offer solutions not amenable to conventional techniques particularly in application domains involving pattern recognition prediction and control Although the origins of ANNs and FL may be traced back to the 1940s and 1960s respectively the most rapid progress has only been achieved in the last fifteen years This has been due to significant theoretical advances in our understanding of ANNs and FL complemented by major technological developments in high speed computing In geophysics ANNs and FL have enjoyed significant success and are now employed routinely in the following areas amongst others 1 Exploration Seismology a Seismic data processing trace editing first break picking deconvolution and multiple suppression wavelet estimation velocity analysis noise identification reduction statics analysis dataset matching prediction attenuation b AVO analysis c Chimneys d Compression I dimensionality reduction e Shear wave analysis f Interpretation event tracking lithology prediction and well log analysis prospect appraisal hydrocarbon prediction inversion reservoir characterisation quality assessment tomography 2 Earthquake Seismology and Subterranean Nuclear Explosions 3 Mineral

Soft Computing and Its Applications Rafik Aziz ogly Aliev, R. R. Aliev, 2001 The concept of soft computing is still in its initial stages of crystallization Presently available books on soft computing are merely collections of chapters or articles about different aspects of the field This book is the first to provide a systematic account of the major concepts and methodologies of soft computing presenting a unified framework that makes the subject more accessible to students and practitioners Particularly worthy of note is the inclusion of a wealth of information about neuro fuzzy neuro genetic fuzzy genetic and neuro fuzzy genetic systems with many illuminating applications and examples Artificial Neural Networks and Machine Learning - ICANN 2022 Elias Pimenidis, Plamen Angelov, Chrisina Jayne, Antonios Papaleonidas, Mehmet Aydin, 2022-09-06 The 4 volumes set of LNCS 13529 13530 13531 and 13532 constitutes the proceedings of the 31st International Conference on Artificial Neural Networks ICANN 2022 held in Bristol UK in September 2022 The total of 255 full papers presented in these proceedings was carefully reviewed and selected from 561 submissions ICANN 2022 is a dual track conference featuring tracks in brain inspired computing and machine learning and artificial neural networks with strong cross disciplinary interactions and applications Artificial Intelligence in Theory and Practice Max Bramer, 2006-08-10 The papers in this volume comprise the refereed proceedings of the conference Artificial Intelligence in Theory and Practice IFIP AI 2006 which formed part of the 19th World Computer Congress of IFIP the International Federation for Information Processing WCC 2006 in Santiago Chile in August 2006 The conference is organised by the IFIP Technical Committee on Artificial Intelligence Technical Committee 12 and its Working Group 12.5 Artificial Intelligence Applications All papers were reviewed by at least two members of our Programme Committee The best papers were selected for the conference and are included in this volume The international nature of IFIP is amply reflected in the large number of countries represented here The conference featured invited talks by Rose Dieng John Atkinson John Debenham and myself IFIP AI 2006 also included the Second IFIP Symposium on Professional Practice in Artificial Intelligence organised by Professor John Debenham which ran alongside the refereed papers I should like to thank the conference chair Professor Debenham for all his efforts in organising the Symposium and the members of our programme committee for reviewing an unexpectedly large number of papers to a very tight deadline This is the latest in a series of conferences organised by IFIP Technical Committee 12 dedicated to the techniques of Artificial Intelligence and their real world applications The wide range and importance of these applications is clearly indicated by the papers in this volume Further information about TCI 2 can be found on our website <http://www.ifiptcl2.org> Artificial Neural Networks V. Rao Vemuri, 1992 **Handbook of Research on Artificial Intelligence Applications in the Aviation and Aerospace Industries** Shmelova, Tetiana, Sikirda, Yuliya, Sterenharz, Arnold, 2019-10-11 With the emergence of smart technology and automated systems in today's world

artificial intelligence AI is being incorporated into an array of professions The aviation and aerospace industry specifically is a field that has seen the successful implementation of early stages of automation in daily flight operations through flight management systems and autopilot However the effectiveness of aviation systems and the provision of flight safety still depend primarily upon the reliability of aviation specialists and human decision making The Handbook of Research on Artificial Intelligence Applications in the Aviation and Aerospace Industries is a pivotal reference source that explores best practices for AI implementation in aviation to enhance security and the ability to learn improve and predict While highlighting topics such as computer aided design automated systems and human factors this publication explores the enhancement of global aviation security as well as the methods of modern information systems in the aeronautics industry This book is ideally designed for pilots scientists engineers aviation operators air crash investigators teachers academicians researchers and students seeking current research on the application of AI in the field of aviation Methods and Applications of Intelligent Control S.G. Tzafestas,2012-12-06 This book is concerned with Intelligent Control methods and applications The field of intelligent control has been expanded very much during the recent years and a solid body of theoretical and practical results are now available These results have been obtained through the synergetic fusion of concepts and techniques from a variety of fields such as automatic control systems science computer science neurophysiology and operational research Intelligent control systems have to perform anthropomorphic tasks fully autonomously or interactively with the human under known or unknown and uncertain environmental conditions Therefore the basic components of any intelligent control system include cognition perception learning sensing planning numeric and symbolic processing fault detection repair reaction and control action These components must be linked in a systematic synergetic and efficient way Predecessors of intelligent control are adaptive control self organizing control and learning control which are well documented in the literature Typical application examples of intelligent controls are intelligent robotic systems intelligent manufacturing systems intelligent medical systems and intelligent space teleoperators Intelligent controllers must employ both quantitative and qualitative information and must be able to cope with severe temporal and spatial variations in addition to the fundamental task of achieving the desired transient and steady state performance Of course the level of intelligence required in each particular application is a matter of discussion between the designers and users The current literature on intelligent control is increasing but the information is still available in a sparse and disorganized way **Artificial Neural Networks** Petia Koprinkova-Hristova,Valeri Mladenov,Nikola K. Kasabov,2014-09-02 The book reports on the latest theories on artificial neural networks with a special emphasis on bio neuroinformatics methods It includes twenty three papers selected from among the best contributions on bio neuroinformatics related issues which were presented at the International Conference on Artificial Neural Networks held in Sofia Bulgaria on September 10 13 2013 ICANN 2013 The book covers a broad range of topics concerning the theory and applications of artificial neural

networks including recurrent neural networks super Turing computation and reservoir computing double layer vector perceptrons nonnegative matrix factorization bio inspired models of cell communities Gestalt laws embodied theory of language understanding saccadic gaze shifts and memory formation and new training algorithms for Deep Boltzmann Machines as well as dynamic neural networks and kernel machines It also reports on new approaches to reinforcement learning optimal control of discrete time delay systems new algorithms for prototype selection and group structure discovering Moreover the book discusses one class support vector machines for pattern recognition handwritten digit recognition time series forecasting and classification and anomaly identification in data analytics and automated data analysis By presenting the state of the art and discussing the current challenges in the fields of artificial neural networks bioinformatics and neuroinformatics the book is intended to promote the implementation of new methods and improvement of existing ones and to support advanced students researchers and professionals in their daily efforts to identify understand and solve a number of open questions in these fields

Govindaraju,A.R. Rao,2013-03-09 R S GOVINDARAJU and ARAMACHANDRA RAO School of Civil Engineering Purdue University West Lafayette IN USA Background and Motivation The basic notion of artificial neural networks ANNs as we understand them today was perhaps first formalized by McCulloch and Pitts 1943 in their model of an artificial neuron Research in this field remained somewhat dormant in the early years perhaps because of the limited capabilities of this method and because there was no clear indication of its potential uses However interest in this area picked up momentum in a dramatic fashion with the works of Hopfield 1982 and Rumelhart et al 1986 Not only did these studies place artificial neural networks on a firmer mathematical footing but also opened the door to a host of potential applications for this computational tool Consequently neural network computing has progressed rapidly along all fronts theoretical development of different learning algorithms computing capabilities and applications to diverse areas from neurophysiology to the stock market Initial studies on artificial neural networks were prompted by a desire to have computers mimic human learning As a result the jargon associated with the technical literature on this subject is replete with expressions such as excitation and inhibition of neurons strength of synaptic connections learning rates training and network experience ANNs have also been referred to as neurocomputers by people who want to preserve this analogy
