**Artificial Intelligence and Automation** Nikolaos G. Bourbakis,1998      **Augmented Exploitation** Phoebe Moore,Jamie Woodcock,2021-03-20 Artificial Intelligence is a seemingly neutral technology but it is increasingly used to manage workforces and make decisions to hire and fire employees Its proliferation in the workplace gives the impression of a fairer more efficient system of management A machine can t discriminate after all Augmented Exploitation explores the reality of the impact of AI on workers lives While the consensus is that AI is a completely new way of managing a workplace the authors show that on the contrary AI is used as most technologies are used under capitalism as a smokescreen that hides the deep exploitation of workers Going beyond platform work and the gig economy the authors explore emerging forms of algorithmic governance and AI augmented apps that have been developed to utilise innovative ways to collect data about workers and consumers as well as to keep wages and worker representation under control They also show that workers are not taking this lying down providing case studies of new and exciting form of resistance that are springing up across the globe      Artificial Intelligence, Automation, and the Economy Executive Office of the President,2017-03-12 Advances in Artificial Intelligence AI technology and related fields have opened up new markets and new opportunities for progress in critical areas such as health education energy economic inclusion social welfare and the environment In recent years machines have surpassed humans in the performance of certain tasks related to intelligence such as aspects of image recognition Experts forecast that rapid progress in the field of specialized artificial intelligence will continue Although it is unlikely that machines will exhibit broadly applicable intelligence comparable to or exceeding that of humans in the next 20 years it is to be expected that machines will continue to reach and exceed human performance on more and more tasks AI driven automation will continue to create wealth and expand the American economy in the coming years but while many will benefit that growth will not be costless and will be accompanied by changes in the skills that workers need to succeed in the economy and structural changes in the economy Aggressive policy action will be needed to help Americans who are disadvantaged by these changes and to ensure that the enormous benefits of AI and automation are developed by and available to all Following up on the Administration s previous report Preparing for the Future of Artificial Intelligence which was published in October 2016 this report further investigates the effects of AI driven automation on the U S job market and economy and outlines recommended policy responses This report was produced by a team from the Executive Office of the President including staff from the Council of Economic Advisers Domestic Policy Council National Economic Council Office of

Management and Budget and Office of Science and Technology Policy The analysis and recommendations included herein draw on insights learned over the course of the Future of AI Initiative which was announced in May of 2016 and included Federal Government coordination efforts and cross sector and public outreach on AI and related policy matters

Cesar Keller,2018-12-08 We are living through the first stages of the Fourth Industrial Revolution Workers of all stripes at all levels stand to be replaced by machines by artificial intelligence in most cases which is only beginning to have its impact In years to come lives will be disrupted Jobs will be lost But the news is not altogether bad NON HUMAN INTELLIGENCE shows how the changes to come can be leveraged in favor of the many and not the few The revolution can be turned to our advantage Chapter by chapter the book walks us through how that can be done with attention to the need for constant education the rising importance of collective intelligence and the changing face of leadership among other things There is a great deal of potential in moments like this when the old structures crumble and we must build something new The new machines will threaten the status quo But we must look always to the future If we play our cards right we can abandon the strictures of everyday labor in favor of rediscovering the best parts of being human **Handbook of Artificial**
