Artificial Mind System Kernel Memory Approach:

Artificial Mind System Tetsuya Hoya, 2005-08-25 This book is written from an engineer's perspective of the mind. Artificial Mind System exposes the reader to a broad spectrum of interesting areas in general brain science and mind oriented studies. In this research monograph a picture of the holistic model of an artificial mind system and its behaviour is drawn as concretely as possible within a unified context which could eventually lead to practical realisation in terms of hardware or software. With a view that the mind is a system always evolving ideas inspired by many branches of studies related to brain science are integrated within the text i.e. artificial intelligence, cognitive science, psychology, connectionism, consciousness studies, general neuroscience, linguistics, pattern recognition, data clustering, robotics and signal processing.

Syntactic Networks—Kernel Memory Approach Tetsuya Hoya, 2024-05-21 This book proposes a novel connectionist approach to a challenging topic of language modeling within the context of kernel memory and artificial mind system both proposed previously by the author in the very first volume of the series Artificial Mind System Kernel Memory Approach Studies in Computational Intelligence Vol 1. The present volume focuses on how syntactic structures of language are modeled in terms of the respective composite connectionist architectures each embracing both the nonsymbolic and symbolic parts. These two parts are developed via inter module processes within the artificial mind system and eventually integrated under a unified framework of kernel memory. The data representation by the networks embodied within the kernel memory principle is essentially local unlike conventional artificial neural network models such as the pervasive multilayer perceptron based neural networks. With this locality principle kernel memory inherently bears many attractive features such as topologically unconstrained network formation, straightforward network growing/shrinking and reconfiguration, no requirement of arduous iterative parameter tuning, construction of transparent and hierarchical data structures and multimodal and temporal data processing via the network representation. Exploiting these multifacet properties of kernel memory with interweaving the notion of inter module processing within the artificial mind system provides coherent accounts for concept formation and how various linguistic phenomena viz word compoundings, morphologies and multiword constructions are modeled. The description is then extended to more intricate network models of context dependent lexical network and syntactic oriented processing, the latter being the central theme of the present study and further to those representing a hybrid of nonverbal and verbal thinking and semantic and pragmatic aspects of sentential meaning. The book is intended for general readers engaging in various areas of study in cognitive science, computer science, engineering, linguistics, philosophy, psycholinguistics and psychology.

Foundations and Novel Approaches in Data Mining Tsau Young Lin, Setsuo Ohsuga, Churn-Jung Liao, Xiaohua Hu, 2005-11-03 Data mining has become a popular research topic in recent years for the treatment of the data rich and information poor syndrome. Currently application oriented engineers are only concerned with their immediate problems which results in an ad hoc method of problem solving. Researchers on the other hand lack an understanding of the

practical issues of data mining for real world problems and often concentrate on issues that are of no significance to the practitioners In this volume we hope to remedy problems by 1 presenting a theoretical foundation of data mining and 2 providing important new directions for data mining research A set of well respected data mining theoreticians were invited to present their views on the fundamental science of data mining We have also called on researchers with practical data mining experiences to present new important data mining topics

Logical Foundations for Rule-Based Systems Antoni

Ligeza,2006-01-25 Thinking in terms of facts and rules is perhaps one of the most common ways of approaching problem definition and problem solving both in everyday life and under more formal circumstances The best known set of rules the Ten Commandments have been accompanying us since the times of Moses the Decalogue proved to be simple but powerful concise and universal It is logically consistent and complete There are also many other attempts to impose rule based regulations in almost all areas of life including professional work education medical services taxes etc Some most typical examples may include various codes e g legal or traffic code regulations especially military ones and many systems of customary or informal rules The universal nature of rule based formulation of behavior or inference principles follows from the concept of rules being a simple and intuitive yet powerful concept of very high expressive power Moreover rules as such encode in fact functional aspects of behavior and can be used for modeling numerous phenomena

Modelling and Optimization of Biotechnological Processes Lei Zhi Chen,Sing Kiong Nguang,Xiao Dong Chen,2007-07-04

Most industrial biotechnological processes are operated empirically One of the major difficulties of applying advanced control theories is the highly nonlinear nature of the processes This book examines approaches based on artificial intelligence methods in particular genetic algorithms and neural networks for monitoring modelling and optimization of fed batch fermentation processes The main aim of a process control is to maximize the final product with minimum development and production costs This book is interdisciplinary in nature combining topics from biotechnology artificial intelligence system identification process monitoring process modelling and optimal control Both simulation and experimental validation are performed in this study to demonstrate the suitability and feasibility of proposed methodologies An online biomass sensor is constructed using a current neural network for predicting the biomass concentration online with only three measurements dissolved oxygen volume and feed rate Results show that the proposed sensor is comparable or even superior to other sensors proposed in the literature that use more than three measurements Biotechnological processes are modelled by cascading two recurrent neural networks It is found that neural models are able to describe the processes with high accuracy Optimization of the final product is achieved using modified genetic algorithms to determine optimal feed rate profiles Experimental results of the corresponding production yields demonstrate that genetic algorithms are powerful tools for optimization of highly nonlinear systems Moreover a combination of recurrent neural networks and genetic algorithms provides a useful and cost effective methodology for optimizing biotechnological processes

Genetic Systems Programming Ajith

Abraham,2008-07-21 Designing complex programs such as operating systems compilers filing systems data base systems etc is an old ever lasting research area Genetic programming is a relatively new promising and growing research area Among other uses it provides efficient tools to deal with hard problems by evolving creative and competitive solutions Systems Programming is generally strewn with such hard problems This book is devoted to reporting innovative and significant progress about the contribution of genetic programming in systems programming The contributions of this book clearly demonstrate that genetic programming is very effective in solving hard and yet open problems in systems programming Followed by an introductory chapter in the remaining contributed chapters the reader can easily learn about systems where genetic programming can be applied successfully These include but are not limited to information security systems compilers data mining systems stock market prediction systems robots and automatic programming *Modelling and Reasoning with Vague Concepts* Jonathan Lawry,2006-01-11 This volume introduces a formal representation framework for modelling and reasoning that allows us to quantify the uncertainty inherent in the use of vague descriptions to convey information between intelligent agents This can then be applied across a range of applications areas in automated reasoning and learning The utility of the framework is demonstrated by applying it to problems in data analysis where the aim is to infer effective and informative models expressed as logical rules and relations involving vague concept descriptions The author also introduces a number of learning algorithms within the framework that can be used for both classification and prediction regression problems It is shown how models of this kind can be fused with qualitative background knowledge such as that provided by domain experts The proposed algorithms will be compared with existing learning methods on a range of benchmark databases such as those from the UCI repository **Computational Intelligence for Modelling and Prediction** Saman K. Wang,B. Goertzel,S. Franklin,2008-02-18 The field of Artificial Intelligence AI was initially directly aimed at the construction of thinking machines that is computer systems with human like general intelligence But this task proved more difficult than expected As the years passed AI researchers gradually shifted focus to producing AI systems that intelligently approached specific tasks in relatively narrow domains In recent years however more and more AI researchers have recognized the necessity and the feasibility of returning to the original goal of the field Increasingly there is a call to focus less on highly specialized narrow AI problem solving systems and more on confronting the difficult issues involved in creating human level intelligence and ultimately general intelligence that goes beyond the human level in various ways Artificial General Intelligence AGI as this renewed focus has come to be called attempts to study and reproduce intelligence as a whole in a domain independent way Encouraged by the recent success of several smaller scale AGI related meetings and special tracks at conferences the initiative to organize the very first international conference on AGI was taken with the goal to give researchers in the field an opportunity to present relevant research results and to exchange ideas on topics of common interest In this collection you will find the conference papers full length papers short position statements and also the papers presented in the post conference workshop on the sociocultural ethical and futurological implications of AGI
