R. Trott,T C

Welch,1999-12-20 The use of refrigeration either directly or as part of an air conditioning system is essential to almost every branch of industry There is a need for practitioners to familiarise themselves with the general principles and methods of refrigeration and air conditioning and the types of plant and operation currently in use This book provides a comprehensive introduction to the principles and practice of refrigeration and air conditioning for the uninitiated student and a general overview of the industry for the practitioner The fundamentals of the subject are introduced without involving the reader too deeply in theory and the content is presented in a logical order This fully revised and updated third edition has a new chapter on Refrigerants that deals with the many changes in this area over the last 10 years including the phase out of CFC and HCFC refrigerants in line with Ozone depletion and Global Warming New replacement refrigerants are described together with Codes of Practice introduced for maintenance and servicing of refrigeration plants The increased use of Ammonia and Propane are included with the relevant Health and Safety aspects and the move towards Absorption refrigeration equipment as more environmentally friendly This new edition of Refrigeration and Air Conditioning is a valuable reference source for

practising engineers and essential reading for students *Handbook of Applied Thermal Design* Eric C. Guyer,1999-02-01
Gives a foundation to the four principle facets of thermal design heat transfer analysis materials performance heating and cooling technology and instrumentation and control The focus is on providing practical thermal design and development guidance across the spectrum of problem analysis material applications equipment specification and sensor and control selection Modeling and Control in Air-conditioning Systems Ye Yao,Yuebin Yu,2016-10-01 This book investigates the latest modeling and control technologies in the context of air conditioning systems Firstly it introduces the state space method for developing dynamic models of all components in a central air conditioning system The models are primarily nonlinear and based on the fundamental principle of energy and mass conservation and are transformed into state space form through linearization The book goes on to describe and discuss the state space models with the help of graph theory and the structure matrix theory Subsequently virtual sensor calibration and virtual sensing methods which are very useful for real system control are illustrated together with a case study Model based predictive control and state space feedback control are applied to air conditioning systems to yield better local control while the air side synergic control scheme and a global optimization strategy based on the decomposition coordination method are developed so as to achieve energy conservation in the central air conditioning system Lastly control strategies for VAV systems including total air volume control and trim response static pressure control are investigated in practice *1986 Refrigeration Systems and Applications* ,1986 **ASHRAE Handbook** ,1990
