**In the Shadow of the Sabertooth** Doug Peacock,2013-06-16 Our climate is changing fast The future is uncertain probably fiery and likely terrifying Yet shifting weather patterns have threatened humans before right here in North America when people first colonized this continent About 15 000 years ago the weather began to warm melting the huge glaciers of the Late Pleistocene In this brand new landscape humans managed to adapt to unfamiliar habitats and dangerous creatures in the midst of a wildly fluctuating climate What was it like to live with huge pack hunting lions saber toothed cats dire wolves and gigantic short faced bears to hunt now extinct horses camels and mammoth Are there lessons for modern people lingering along this ancient trail The shifting weather patterns of today what we call global warming will far exceed anything our ancestors previously faced Doug Peacock s latest narrative explores the full circle of climate change from the death of the megafauna to the depletion of the ozone in a deeply personal story that takes readers from Peacock s participation in an archeological dig for early Clovis remains in Livingston MT near his home to the death of the local whitebark pine trees in the same region as a result of changes in the migration pattern of pine beetles

with the warming seasons
