Beset By Contradictions:

Seventeen Contradictions and the End of Capitalism David Harvey, 2014-04-03 You thought capitalism was permanent Think again David Harvey unravels the contradictions at the heart of capitalism its drive for example to accumulate capital beyond the means of investing it its imperative to use the cheapest methods of production that leads to consumers with no means of consumption and its compulsion to exploit nature to the point of extinction These are the tensions which underpin the persistence of mass unemployment the downward spirals of Europe and Japan and the unstable lurches forward of China and India Not that the contradictions of capital are all bad they can lead to the innovations that make capitalism resilient and it seems permanent Yet appearances can deceive while many of capital's contradictions can be managed others will be fatal to our society This new book is both an incisive guide to the world around us and a manifesto for change

Progress and Rationality in Science G. Radnitzky, G. Andersson, Robert S. Cohen, Marx W. Wartofsky, 2012-12-06 This collection of essays has evolved through the cooperative efforts which began in the fall of 1974 of the participants in a workshop sponsored by the Fritz Thyssen Foundation The idea of holding one or more small colloquia devoted to the topics of rational choice in science and scientific progress originated in a conversation in the summer of 1973 between one of the editors GR and the late Imre Lakatos Unfortunately Lakatos himself was never able to see this project through but his thought provoking methodology of scientific research programmes was ably expounded and defended by his successors Indeed this volume continues and deepens the debate inaugurated in *Criticism and the Growth of Knowledge* edited by Imre Lakatos and Alan Musgrave a book which grew out of a conference held in 1965 That debate has continued during the years that have passed since that conference The group of discussions about the place of rationality in science which have been held between those who emphasize the history of science with Feyerabend and Kuhn as the most prominent exponents and the critical rationalists Popper and his followers with Imre Lakatos defending a middle ground these discussions were seen by almost all commentators as the most important event in the philosophy of science in the last decade This problem area constituted the central theme of our Thyssen workshop The workshop operated in the following manner
