Advances in Applied Sport Psychology , **Humanistic Wellbeing** Joar Vittersø,2025-02-12 This open access book seeks to change the way we think about happiness and the good life It starts ambitiously by exploring how the biological question What is life can be integrated with the philosophical question What is good It ends with a radical idea for how scientific reasoning can include a value based theory of the good life Anchored in basic knowledge about human nature the new humanistic theory of wellbeing suggests that a life is good to the extent that it allows us to perform our humanness well The theory further defines a well performed humanness as the fulfilment of three universal human needs the need for stability the need for change and the need to and for care To reach this standpoint the author critically examines major concepts in the wellbeing literature such as values happiness life satisfaction affect hedonia eudaimonia and the good life Based on these reviews the author argues that a science of wellbeing cannot be strictly descriptive and value free A life should not be considered good only because it feels good or is thought of as good for the person living it A good life must also be committed to a universal morality Therefore the humanistic theory of wellbeing suggests that it is good to like one's life but even better to like it for the right reasons

Understanding Extreme Sports: A Psychological Perspective Eric Brymer,Francesco Feletti,Erik Monasterio,Robert D. Schweitzer,2020-03-30 Extreme sports those activities that lie on the outermost edges of independent adventurous leisure activities where a mismanaged mistake or accident would most likely result in death have developed into a significant worldwide phenomenon

Brymer Patterson 2002 and Generation Z turn to extreme sports because they are popular and linked to escapism
Giannoulakis Pursglove 2017 Arguably extreme sports now support a multi billion dollar industry and the momentum seems to be intensifying Traditional explanations for why extreme sports have become so popular are varied For some the popularity is explained as the desire to rebel against a society that is becoming too risk averse for others it is about the spectacle and the merchandise that is associated with organised activities and athletes For others it is just that there are a lot of people attracted by risk and danger or just want to show off For others still it is about the desire to belong to sub cultures and the glamour that goes with extreme sports Some seek mastery in their chosen activity and in situations of significant challenges This confusion is unfortunate as despite their popularity there is still a negative perception about extreme sports participation There is a pressing need for clarity The dominant research perspective has focused on positivist theory driven perspectives that attempt to match extreme sports against predetermined characteristics For the most part empirical research has conformed to predetermined societal perspectives Other ways of knowing might reveal more nuanced perspectives of the human dimension of extreme sport participation This special edition brings together cutting edge research and thought examining psychology and extreme sports with particular attention payed to the examination of motivations for initial participation continued participation effective performance and outcomes from participation
