Black Hat Inc is the premier worldwide provider of security training, consulting, and conferences. In Black Hat Physical Device Security: Exploiting Hardware and Software, the Black Hat experts show readers the types of attacks that can be done to physical devices such as motion detectors, video monitoring, and closed circuit systems, authentication systems, thumbprint, and voice print devices, retina scans, and more. The Black Hat Briefings held every year in Las Vegas, Washington DC, Amsterdam, and Singapore continually expose the greatest threats to cyber security and provide IT mind leaders with ground breaking defensive techniques. There are no books that show security and networking professionals how to protect physical security devices. This unique book provides step by step instructions for assessing the vulnerability of a security device such as a retina scanner, seeing how it might be compromised, and taking protective measures. The book covers the actual device as well as the software that runs it. By way of example, a thumbprint scanner that allows the thumbprint to remain on the glass from the last person could be bypassed by pressing a gummy bear piece of candy against the glass so that the scan works against the last thumbprint that was used on the device. This is a simple example of an attack against a physical authentication system. First book by world renowned Black Hat Inc security consultants and trainers. First book that details methods for attacking and defending physical security devices. Black Hat Inc is the premier worldwide provider of security training, consulting, and conferences.

Reliable Communications within Cyber-Physical Systems Using the Internet (RC4CPS) Mohammad Elattar, 2019-08-07. This thesis describes the research done regarding communication reliability when using the Internet to realize the communications for cyber physical systems (CPSs). In a nutshell, the book first presents the obtained results from real world measurements describing the reliability of today's Internet in terms of the availability and diversity of a wide set of end to end paths in the Internet. The existing literature is analyzed after that, and the identified research gap is highlighted. The proposed approach along with conducted measurements to evaluate it are described in the remaining chapters of the book.
