gemacht werden um ihr kulturelles Erbe zu bewahren Molecular World Catherine M. Jackson, 2023-07-04 A compelling
and innovative account that reshapes our view of nineteenth century chemistry explaining a critical period in chemistry's
quest to understand and manipulate organic nature According to existing histories theory drove chemistry's remarkable
nineteenth century development In *Molecular World* Catherine M Jackson shows instead how novel experimental approaches
combined with what she calls laboratory reasoning enabled chemists to bridge wet chemistry and abstract concepts and in so
doing create the molecular world Jackson introduces a series of practice based breakthroughs that include chemistry's move
into lampworked glassware the field's turn to synthesis and subsequent struggles to characterize and differentiate the
products of synthesis and the gradual development of institutional chemical laboratories an advance accelerated by synthesis
and the dangers it introduced Jackson's historical reassessment emerges from the investigation of alkaloids by German
chemists Justus Liebig August Wilhelm Hofmann and Albert Ladenburg Stymied in his own research Liebig steered his
student Hofmann into pioneering synthesis as a new investigative method Hofmann's practice based laboratory reasoning
produced a major theoretical advance but he failed to make alkaloids That landmark fell to Ladenburg who turned to cutting
edge theory only after his successful synthesis In telling the story of these scientists and their peers Jackson reveals organic
synthesis as the ground chemists stood upon to forge a new relationship between experiment and theory with far reaching

consequences for chemistry as a discipline **For Better or For Worse? Collaborative Couples in the Sciences** Annette Lykknes, Donald L. Opitz, Brigitte Van Tiggelen, 2012-06-05 In this volume a distinguished set of international scholars examine the nature of collaboration between life partners in the sciences with particular attention to the ways in which personal and professional dynamics can foster or inhibit scientific practice Breaking from traditional gender analyses which focus on divisions of labor and the assignment of credit the studies scrutinize collaboration as a variable process between partners living in the nineteenth and twentieth centuries who were married and divorced heterosexual and homosexual aristocratic and working class and politically right and left The contributors analyze cases shaped by their particular geographical locations ranging from retreat settings like the English countryside and Woods Hole Massachusetts to university laboratories and urban centers in Berlin Stockholm Geneva and London The volume demonstrates how the terms and meanings of collaboration variably shaped by disciplinary imperatives cultural mores and the agency of the collaborators themselves illuminate critical intellectual and institutional developments in the modern sciences Bright Colours from the Past Maarten R. van Bommel, Matthijs de Keijzer, 2025-07-07 The invention of Mauveine by Perkin in 1856 led to a revolution in the world of textile dyeing In the second half of the 19th century natural dyes were quickly replaced by newly developed synthetic dyes which resulted in a bright palette of colours The synthetic dyes were not only cheaper to produce but also easier to apply on textiles due to new dyeing mechanisms As a result production costs decreased tremendously and brilliantly dyed textiles became available to the larger public The introduction of synthetic dyes had a strong impact in fashion in addition these colourants were also used as stains on furniture as inks and in paints In this publication the development of these vivid colourants is presented It brings together information about the history of synthetic dyes including the first attempts the so called semi synthetic dyes and presenting the most relevant dyes and dye classes such as nitro dyes tri arylmethanes azo dyes xanthenes sulfur dyes synthetic alizarin and synthetic indigo It contains a wealth of information regarding the numerous synonyms trade names manufacturers and patents International trade and competition which was fierce are discussed The chemistry behind the synthetic dyeing is explained including new dyeing technologies developed The application of dyes and their fastness properties are also presented An overview of analytical techniques used for characterisation is given Many case studies are included expressing the importance of the dyes and the creativity of mankind when applying these colourants As such this publication can be seen as a colourful journey through history relevant for conservators curators historians chemists and all who are interested in the history and development of synthetic dyes

Berichte der Deutschen Chemischen Gesellschaft , 1968 The Tale of Tea George L. van Driem, 2019-01-14 The Tale of Tea is the saga of globalisation Tea gave birth to paper money the Opium Wars and Hong Kong triggered the Anglo Dutch wars and the American war of independence shaped the economies and military history of T'ng and S'ng China and moulded Chinese art and culture Whilst black tea dominates the global market today such tea is a recent invention No tea plantations

existed in the world's largest black tea producing countries India, Kenya and Sri Lanka when the Dutch and the English went to war about tea in the 17th century. This book replaces popular myths about tea with recondite knowledge on the hidden origins and detailed history of today's globalised beverage in its many modern guises. **Amino Acids: Insights and Roles**

in Heterocyclic Chemistry Zerong Wang, 2023-05-26. In one place all the heterocycles from amino acids and the synthetic methods with detailed mechanistic discussions and experimental procedures. It provides up to date information on the challenges in working with amino acids, the protecting groups for the carboxyl amino and side chain groups and popular heterocyclic compounds. Heinrich Caro and the Creation of Modern Chemical Industry Carsten Reinhardt, Anthony S. Travis, 2013-06-29. Heinrich Caro 1834-1910 was the inventor of new chemical processes that in the two decades commencing in 1869 enabled BASF of Ludwigshafen, Germany to take first place among manufacturers of synthetic dyestuffs. The cornerstones of Caro's success were his early training as calico cotton printer in Germany and his employment at a chemical firm in Manchester, England. Caro was a creative research chemist, a highly knowledgeable patent specialist and expert witness and a brilliant manager of science-based chemical technology. This first full-length scientific biography of Heinrich Caro delineates his role in the emergence of the industrial research laboratory, the forging of links between academic and industrial chemistry and the development of modern patent law. Major chemical topics include the rise of classical organic chemistry, collaboration with Adolf Baeyer, artificial alizarin and indigo, aniline dyes and other coal tar products, particularly intermediates. **Pepper and Pepper Substitutes**, 1950.
