Clark II, Grant Cooke, 2016-03-10 *Smart Green Cities* is a comprehensive overview of what global cities are doing to become sustainable. Woodrow W. Clark II and Grant Cooke have produced a book that is both practical and visionary. They have examined the infrastructure needs, sustainable development, communications, energy, water, waste, and transportation to develop guidelines, processes, and best practices. City leaders are key to mitigating climate change; who must plan, design, and implement solutions. *Smart Green Cities* (SGC) offers a global perspective that includes implementing the Green Industrial Revolution. The title of their last book, SGC, discusses innovative emerging technologies and the new economics paradigm that move beyond the out-dated neo-classical economics. The authors present examples from around the world, including Europe, the U.S., China, and the Middle East, which discuss the best green technologies from renewable energy power generation to smart on-site grid development. The extraordinary shift from a rural to an urban world is described; national plans are analyzed so that future cities will be designed, built, and implemented now, not 50 years from now. The struggle for the planet's survival is being waged by the world's cities. Clark and Cooke argue that cities are the key to mitigating climate change and reducing toxic greenhouse gas emissions. SGC introduces sustainable technologies, discusses the economics for implementing the solutions, and offers numerous examples to serve as pathways for cities to become smart, green, and thus carbon neutral.
