### **The History of Visual Magic in Computers**

Jon Peddie, 2013-06-13 If you have ever looked at a fantastic adventure or science fiction movie or an amazingly complex and rich computer game or a TV commercial where cars or gas pumps or biscuits behaved like people and wondered How do they do that then you've experienced the magic of 3D worlds generated by a computer 3D in computers began as a way to represent automotive designs and illustrate the construction of molecules 3D graphics use evolved to visualizations of simulated data and artistic representations of imaginary worlds In order to overcome the processing limitations of the computer graphics had to exploit the characteristics of the eye and brain and develop visual tricks to simulate realism The goal is to create graphics images that will overcome the visual cues that cause disbelief and tell the viewer this is not real Thousands of people over thousands of years have developed the building blocks and made the discoveries in mathematics and science to make such 3D magic possible and The History of Visual Magic in Computers is dedicated to all of them and tells a little of their story It traces the earliest understanding of 3D and then foundational mathematics to explain and construct 3D from mechanical computers up to today's tablets Several of the amazing computer graphics algorithms and tricks came of periods where eruptions of new ideas and techniques seem to occur all at once Applications emerged as the fundamentals of how to draw lines and create realistic images were better understood leading to hardware 3D controllers that drive the display all the way to stereovision and virtual reality

Modernism and Magic Leigh Wilson, 2012-11-14 While modernism s engagement with the occult has been approached by critics as the result of a loss of faith in representation an attempt to draw on science as the primary discourse of modernity or as a hidden history of ideas Leigh Wilson argues that these discourses have at their heart a magical practice which remakes the relationship between world and representation As Wilson demonstrates the courses of the occult are based on a magical mimesis which transforms the nature of the copy from inert to vital from dead to alive from static to animated from powerless to powerful Wilson explores the aesthetic and political implications of this relationship in the work of those writers artists and filmmakers who were most self consciously experimental including James Joyce Ezra Pound Dziga Vertov and Sergei M Eisenstein
