1 Introduction Ladybugs seem to come and go without being noticed most of the time They are cute and colorful insects

Insects are a living species that have a 3 part body several eyes 3 pairs of jointed legs and 1 pair of antennae

Antennae are long thin sensors

Scientists that study insects are called entomologists

Entomology is a Greek word meaning segmented or cut into pieces

The study of insects is part of the field of biology which studies all living things

An insect's body has pieces that are joined together

Some animals have a long spine or backbone which means that they are made all in one piece

Insects are a diverse and fascinating form of life which accounts for more than two thirds of all known organisms

There are approximately 1.3 million named species of insects around the globe

Insect species are still being identified and classified with a description and a name

Ladybugs have a

smooth and delicate shell on the top of their body Underneath 6 tiny rough legs work together so that they can walk around Watch them move they are slow and steady They can tip over by accident and they may get stuck Their stubby legs and their round body will struggle to right themselves Just give them a little push and they will have their shell back on top When ladybugs cluster on a sunny kitchen window they can be a pest But they are helpful creatures in the garden field and forest They naturally feed on the harmful insects that destroy plants crops and trees Ladybugs or lady beetles fly and cluster together
