Denial And Defense In The Therapeutic Situation:

Denial & Defense in the Therapeutic Situation Theodore L. Dorpat, 1985 **The Concept of Defense**

Mechanisms in Contemporary Psychology Uwe Hentschel, Gudmund J.W. Smith, Wolfram Ehlers, Juris G.

Draguns, 2012-12-06 What is the scientific status and the truth value of the concept of defense mechanisms Among contemporary psychologists three types of answers to this question may be expected Some would wholeheartedly endorse the theoretical clinical and research value of this notion others would reject it outright Between these two extremes a large number of observers perhaps the majority would suspend their judgment Their attitude compounded of hope and doubt would capitalize on defense as an interesting and promising concept At the same time these psychologists would express skepticism and disappointment over its clinical limitations theoretical ambiguity and research failures The present volume is primarily addressed to the audience of hopeful skeptics those who have not given up on the notion of defense yet have been frustrated by the difficulties of incorporating it into the modern streamlined structure of psychology To this end we have brought together theoretical and empirical contributions germane to defense together with reports about their applications to clinical and personality assessment especially in relation to psychopathology psychosomatics and psychotherapeutic intervention , **The Development of Defense Mechanisms** Phebe Cramer, 2012-12-06

The idea that the human mind that faculty of the intellect which we use to define and discern the truth might also be used to deceive itself is not new The classic orator Demosthenes warned of this possibility in 349 B C when he wrote that Nothing is more easy than to deceive one's self what a man wishes he generally believes to be true 1 Even Jean Jacques Rousseau who suggested the possibility of man as noble savage alerts us to this paradox when he writes Jamais la nature ne nous trompe c'est toujours nous qui nous trompons Nature never deceives us it is always we who deceive ourselves 2 But it was Sigmund Freud who placed this idea firmly into the field of psychopathology and then later into a general psychological theory According to Freud understanding the function of a defense mechanism means not only fathoming the origin of pathological symptoms but also comprehending a model of the mind that includes both conscious and unconscious mental processes From this initial focus on the general process of defense Freud and his followers went on to identify various forms this process might take with the result that today we have a list of 37 more than 37 defense mechanisms described in the literature

Clinical Interaction and the Analysis of Meaning Theo L. Dorpat, Michael L. Miller, 2013-05-13 Clinical Interaction and the Analysis of Meaning evinces a therapeutic vitality all too rare in works of theory Rather than fleeing from the insights of other disciplines Dorpat and Miller discover in recent research confirmation of the possibilities of psychoanalytic treatment In Section I Critique of Classical Theory Dorpat proposes a radical revision of the notion of primary process consonant with contemporary cognitive science Such a revised conception not only enlarges our understanding of the analytic process it also provides analysis with a conceptual language that can articulate meaningful connections with a growing body of empirical research about the

development and nature of human cognition In Section II Interactional Theory Miller reverses the direction of inquiry He begins with the literature on cognitive development and functioning and proceeds to mine it for concepts relevant to the clinical process He shows how a revised understanding of the operation of cognition and affect can impart new meaning to basic clinical concepts such as resistance transference and level of psychopathology In Section III Applications and Exemplifications Dorpat concludes this exemplary collaboration by exploring select topics from the standpoint of his and Miller's new psychoanalytic theory At the heart of the authors endeavor is meaning analysis a concept that integrates an up to date model of human information processing with the traditional goals of psychoanalysis The patient approaches the clinical encounter they argue with cognitive affective schemas that are the accumulative product of his life experience to date the manifold meanings ascribed to the clinical interaction must be understood as the product of these schemas rather than as distortions deriving from unconscious drive related fantasies The therapist's goal is to make the patient's meaning making conscious and thus available for introspection

Denial and Quality of Life in Lung Cancer Patients Tineke Vos, 2025-10-01 Denial in cancer patients is a well known concept The definition of denial however is not unequivocal and covers different ways of evading painful events or feelings This thesis studies denial and its relation to the quality of life in lung cancer patients To assess the level of denial the Denial of Cancer Interview DCI was developed Denial was measured at different time points in the course of the disease The key finding from this study is that patients fare better when they express a moderate level of denial or increase their level of denial from the moment of diagnosis over time This study shows convincingly that denial in lung cancer patients deserves attention in clinical practice In this era of self disclosure it is good to realize that some patients need protection against unbearable facts and feelings Denial can serve this need and should be respected

Defense Mechanisms Uwe Hentschel, Gudmund Smith, Juris G Draguns, Wolfram Ehlers, 2004-06-12 The book is focused on defense mechanisms as theoretical constructs as well as the possibilities of their empirical registration by different methods and the application of these constructs in different fields of psychology with special regard to concurrent and predictive validity It is argued that defense mechanisms are in many ways to be seen as integrative constructs not necessarily restricted to psychoanalytic theory and that the potential fields of their application have a wide ranging scope comprising many fields of psychology Consequently empirical studies are presented from the fields of clinical and personality psychology psychotherapy research and psychosomatic phenomena and diseases Methodological questions have a heavy weight in most of these studies Provides coverage of relevant literature Covers different fields of application Attempts an integration of the construct of defense mechanisms into mainstream psychology Provides explanations of the theoretical basis of the construct of defense mechanisms

The Mythomanias Michael S. Myslobodsky, 2013-06-17 Recently there has been a renewal of interest in the broad and loosely bounded range of phenomena called deception and self deception This volume addresses this interest shared by philosophers social and clinical psychologists and more recently neuroscientists and

cognitive scientists Expert contributors provide timely reliable and insightful coverage of the normal range of errors in perception memory and behavior They place these phenomena on a continuum with various syndromes and neuropsychiatric diseases where falsehood in perception self perception cognition and behaviors are a peculiar sign Leading authorities examine the various forms of mythomania deception and self deception ranging from the mundane to the bizarre such as imposture confabulations minimization of symptomatology denial and anosognosia Although the many diverse phenomena discussed here share a family resemblance they are unlikely to have a common neurological machinery In order to reach an explanation for these phenomena a reliable pattern of lawful behavior must be delineated It would then be possible to develop reasonable explanations based upon the underlying neurobiological processes that give rise to deficiencies designated as the mythomanias The chapters herein begin to provide an outline of such a development Taken as a whole the collection is consistent with the emerging gospel indicating that neither the machinery of nature nor the forces of nurture taken alone are capable of explaining what makes cognition and behaviors aberrant

Rage and Denials Branko Mitrović, 2015-08-13 In *Rage and Denials* philosopher and architectural historian Branko Mitrović examines in detail the historiography of art and architecture in the twentieth century with a focus on the debate between the understanding of society as a set of individuals and the understanding of individuals as mere manifestations of the collectives to which they belong The conflict between these two views constitutes a core methodological problem of the philosophy of history and was intensely debated by twentieth century art historians one of the few art historical debates with a wide range of implications for the entire field of the humanities Mitrović presents the most significant positions and arguments in this dispute as they were articulated in the art and architectural historical discourse as well as in the wider context of the historiography and philosophy of history of the era He explores the philosophical content of scholarship engaged in these debates examining the authors positions the intricacies and implications of their arguments and the rise and dominance of collectivist art historiography after the 1890s He centers his study on the key art historical figures Erwin Panofsky Ernst Gombrich and Hans Sedlmayr while drawing attention to the writings of the less well known Vasiliy Pavlovich Zubov *Rage and Denials* offers a valuable window onto how key aspects of modern research in the humanities took shape over the course of the twentieth century

Altered Egos Todd E. Feinberg, 2002 One of the great unsolved mysteries is how the brain creates the subjective sense of a unified self In *Altered Egos* Feinberg a psychiatrist and neurologist addresses this question by considering how the human brain functions and malfunctions in patients with neurological perturbations of the self He goes on to present a new theory of the self that links the brain with unique characteristics of the mind such as meaning purpose and being He explains why the self and the mind are uniquely personal constituents of the life of the individual

101 Defenses Jerome S. Blackman, 2004-03-01 Defenses are mental operations that restore or maintain psychic equilibrium when people feel that they cannot manage emotions that stem from conflict they remove components of unpleasant emotions from

conscious awareness For example using sex food or hostility to relieve tension that s a defense catalogued here as entry number 68 Impulsivity Screaming at someone can be a defense Playing golf can be a defense So can saving money Or at least all of these activities may involve defenses In this book Blackman catalogs 101 defenses the most ever compiled with descriptions practical for use in everyday assessment and treatment of psychopathology He explains how to detect and interpret a defense and offers supportive therapy techniques The many practical tips interspersed throughout this text make it an excellent reference tool for students and experienced clinicians while the user friendly features allow all readers to experience how psychological defenses operate in everyday life

The Journal of the American Academy of

Psychoanalysis ,1988 American Journal of Psychotherapy ,1947 **A Passion for Ignorance** Renata Salecl,2022-11-29

An original and provocative exploration of our capacity to ignore what is inconvenient or traumatic Ignorance whether passive or active conscious or unconscious has always been a part of the human condition Renata Salecl argues What has changed in our post truth postindustrial world is that we often feel overwhelmed by the constant flood of information and misinformation It sometimes seems impossible to differentiate between truth and falsehood and as a result there has been a backlash against the idea of expertise and a rise in the number of people actively choosing not to know The dangers of this are obvious but Salecl challenges our assumptions arguing that there may also be a positive side to ignorance and that by addressing the role of ignorance in society we may also be able to reclaim the role of knowledge Drawing on philosophy social and psychoanalytic theory popular culture and her own experience Salecl explores how the passion for ignorance plays out in many different aspects of life today from love illness trauma and the fear of failure to genetics forensic science big data and the incel movement and she concludes that ignorance is a complex phenomenon that can on occasion benefit individuals and society as a whole The result is a fascinating investigation of how the knowledge economy became an ignorance economy what it means for us and what it tells us about the world today

The Misuse of Persons Stanley J. Coen,2013-11-26 In this major contribution to contemporary psychoanalysis Stanley Coen illuminates a heretofore undescribed character structure especially resistant to analytic process Pathologically dependent patients for Coen are identified not by surface character traits but by their response to the intrapsychic demands of analysis Such patients remain in treatment sometimes contentedly sometimes amid rebukes and complaints but they do not profit from it Their inability to use insight especially in the transference is matched by a proclivity for sadomasochistic enmeshment In analysis this tendency translates into a continuing dependent attachment to the analyst In exploring the genetic roots of pathological dependency Coen ranges beyond extant trauma theories in describing a pattern of parent child interaction in which repetitive behavioral enactments substitute for the acceptance and resolution of conflicts both intrapsychic and interpersonal In analysis pathologically dependent patients use the analyst as they have come to use significant others throughout their lives as part of a defensive structure characterized by repetitive enactments and a refusal to face what is wrong with them This misuse of others is

infused with destructiveness hostility and rage and the analyst necessarily becomes the object of these powerful emotions With such patients then the road to therapeutic progress invariably passes through the analysis of mutual transferential and countertransferential hate the patient's tempting invitations to collusion and avoidance notwithstanding **Gaslighting, the Double Whammy, Interrogation and Other Methods of Covert Control in Psychotherapy and Analysis** Theodore L. Dorpat, 1996-10-28 In treatment the psychotherapist is in a position of power Often this power is unintentionally abused While trying to embody a compassionate concern for patients therapists use accepted techniques that can inadvertently lead to control indoctrination and therapeutic failure Contrary to the stated tradition and values of psychotherapy they subtly coerce patients rather than respect and genuinely help them The more gross kinds of patient abuse deliberate ones such as sexual and financial exploitation are expressly forbidden by professional organizations However there are no regulations discouraging the more covert forms of manipulation which are not even considered exploitative by many clinicians In this book noted psychiatrist Theo L Dorpat strongly disagrees Using a contemporary interactional perspective Dorpat demonstrates the destructive potential of manipulation and indoctrination in treatment This book is divided into three parts Part I explores the various ways power can be abused Part II examines eleven treatment cases in which covert manipulation and control either caused analytic failure or severely impaired the treatment process Cases discussed include the analyses of Dora and the Wolf Man by Freud the two analyses of Mr Z by Kohut as well as other published and unpublished treatments An interactional perspective is used to examine the harmful short and long term effects of using indoctrination methods as well as to unravel conscious and unconscious communications between therapists and patients that can contribute to manipulations Part III shows readers how to work using a non directive egalitarian approach in both psychoanalytic psychotherapy and psychoanalysis **Grief Therapy with Latinos** Carmen Vazquez, Dinelia Rosa, 2011-01-28 We recommend this work for both bilingual counselors and for mono lingual counselors in schools and clinical settings The grief counseling techniques are clearly explained and are accessible even to those who have not been extensively trained in the areas of loss and grief Illness Crisis and Loss Grief Therapy with Latinos Integrating Culture for Clinicians advances the field of grief therapy by offering a culturally sensitive model for Latino as Rich in theory and practice this book offers a culturally congruent approach to grief therapy The authors present an effective model that teaches therapists how to comprehend Latino as mourning in Spanish Grief Therapy with Latinos Integrating Culture for Clinicians can serve as a graduate textbook as well as a reference for novice and seasoned clinicians Lillian Comas Diaz PhD in Psychoanalytic Psychology This book serves as both a graduate textbook and clinical reference that helps in the understanding of relevant cultural values and their effect on the grieving process Grief Therapy with Latinos also addresses the application of specific interventions in a culturally appropriate manner including the importance of language in grief therapy psychology and counseling with a Latino population The main focus of this book is to identify underlying pathologies depressions or anxieties that could have existed

before and the relevance of the cultural components that can interfere with the adaption to and the resolution of grief

Written in three parts specific cultural and psychological components of Latino grief the many faces of grief and grief within the family context each part demonstrates a clear hands on approach to how to respond to Latino patients and addresses aspects universally related to grief and psychological points of view Key features Addresses culturally specific and diverse narratives of loss to illustrate cultural revelations in the grief process and the clinical assessment of denial and spirituality Discusses the relevance of language in the expression of grief assessment and treatment Presents clear and easy to read grief therapy approaches and methods Includes adaptations of traditional psychotherapeutic techniques incorporating relevant cultural values

Alcoholism and Clinical Psychiatry Joel Solomon, 2012-12-06 It is well known that alcoholism continues to be one of this country's major public health problems This issue is carefully documented by Dr Gerald Klerman Chief of ADAMHA in the second chapter of this volume In spite of the major role that alcohol plays in the health care issues of internal medicine neurology and

psychiatry the subject continues to fall between the cracks of the various disciplines For this reason it has become almost a discipline of its own yet there are no academic departments of alcoholism because academic departments are unidisciplinary and alcoholism is clearly a multidisciplinary field within medicine In spite of the many disciplines involved in the study and treatment of alcoholism psychiatry continues to have a special albeit often neglected relationship to alcoholism and it is the articulation of that relationship which prompted the Department of Psychiatry at the Downstate Medical Center to organize the conference upon which many chapters in this volume are based Particular emphasis in selecting the topics to be covered was placed on the interface between alcoholism and clinical psychiatry including affective disorders schizophrenia suicide adolescence the special problems of women and psychotherapy to mention only some of them
