Dependency And Development In Latin America:

Dependency and Development in Latin America Fernando Henrique Cardoso, Enzo Faletto, 1979-03-19 At the end of World War II several Latin American countries seemed to be ready for industrialization and self sustaining economic growth. Instead they found that they had exchanged old forms of political and economic dependence for a new kind of dependency on the international capitalism of multinational corporations. In the much acclaimed original Spanish edition *Dependencia y Desarrollo en América Latina* and now in the expanded and revised English version Cardoso and Faletto offer a sophisticated analysis of the economic development of Latin America. The economic dependency of Latin America stems not merely from the domination of the world market over internal national and enclave economies but also from the much more complex interaction of economic drives, political structures, social movements and historically conditioned alliances. While heeding the unique histories of individual nations, the authors discern four general stages in Latin America's economic development: the early outward expansion of newly independent nations; the political emergence of the middle sector; the formation of internal markets in response to population growth; and the new dependence on international markets. In a postscript for this edition, Cardoso and Faletto examine the political, social and economic changes of the past ten years in light of their original hypotheses.

Dependence is dead long live dependence and the class struggle thus the title of an article by the dependency theorist André Gunder Frank published in 1974 in *Latin American Perspectives*. Indeed it has often been stated that dependency theory has lost its significance in explaining underdevelopment and has thus been relegated to footnote status in the field of development studies. Yet in recent years a lot of scholars have attempted to refute this statement claiming that dependency theory still has its use in development studies even though they have identified a number of flaws. Emerging in parallel with other development theories in the 1950s, dependency theory mainly focuses on Latin America, the most important authors being Prebisch, Furtado, dos Santos, Frank and finally Cardoso and Faletto whose theory this paper concentrates on. Most of the different approaches within dependency theory share several Marxist core assumptions such as the construction of base means and relations of production and superstructure, the political, cultural and social consequences of these means and relations of production. On the international level, all politics, whether external or domestic, takes place within the framework of the capitalist world economy which determines the behavior of actors as well as patterns of interaction between them. In this paper, the question of whether dependency theory as presented by Fernando Henrique Cardoso and Enzo Faletto is still useful in explaining underdevelopment will be examined, considering as example the events occurring in a typical example of an underdeveloped Latin American economy, Bolivia. The election of the left wing populist Evo Morales potentially represents

Dependent Development Peter B. Evans, 2018-06-05 In order to analyze Brazil s recent accumulation of capital in the light of its continued dependence Peter Evans focuses on the relationships among multinational corporations local private entrepreneurs and state owned enterprises that have developed in Brazil over the last decade He argues that while relations among the three kinds of capital continue to be contradictory a triple alliance has been formed that provides the social structural basis for the pattern of local industrialization that has emerged The author begins with a review of the theories of imperialism and dependency in the third world Placing the Brazilian experience of the last twenty years in its historical context he traces the country s evolution from the period of classic dependence at the turn of the century to the current stage of dependent development In conclusion Professor Evans discusses the implications of the Brazilian model for other third world countries Examining the nature of the triple alliance as it is manifested in such industries as pharmaceuticals textiles and petrochemicals the author reveals the complex differentiation of the groups roles in industrialization and lays bare the grounds for their collaboration and their conflict He consequently shows how the differing interests power and capabilities of the three groups have combined to produce a system promoting industrialization that benefits the elite partnership but excludes the larger population from the rewards of growth

The Military in South American Politics George Philip, 2024-10-31 First published in 1985 The Military in South American Politics analyses the nature of military involvement in politics in Latin America The author presents many original arguments in the course of his discussion of the key issues These include the civil military system whereby the military exert power and influence even when they are not in government how this system and also military professionalism have developed over time how the corporatist ethic of South America military differs from the partisan ethic of the military in Central American and Caribbean countries and the consequences of this how there are different types of coups how the military find it difficult to disengage how the military often intervene to exercise the principle of guardianship in order to preserve the fabric of society and economy which in South America are remarkably stable despite the many coups Throughout the author draws on examples from all Latin American countries from the middle of the nineteenth century onwards and summarises the existing literature to support his rich and convincing arguments The book concludes with a summary of the arguments and with a discussion of trends and the prospects for real democratisation It is a must read for students and researchers of Latin American politics and military studies

earlier efforts to internalize production and to build vertically integrated systems across several sectors of the economy. In spite of the visible gap that separated the top global giants from the large local enterprises, Brazilian companies seemed to be willing to join in an economic liberalization process that was bound to expose them to unprecedented levels of competition, bring about a high degree of uncertainty, and in many cases ultimately put their own businesses at risk. *Big Business and Brazil's Economic Reforms* examines the most emblematic aspect of the Brazilian economic reforms: the support from parts of the local entrepreneurial class for the opening up of the economy. It investigates the reasons why Brazil carried out these economic reforms in the 1990s, the transition process, and the impact of the opening up of the economy on some of its most important sectors, such as the aerospace, auto and auto parts, food processing, oil and petrochemicals, ethanol, steel, telecoms, and telecom equipment industries. This book offers an in-depth analysis of Brazil's distinctive development paths from the Latin American economic thinking of the early stages of its industrialization to the neo-liberal stance of the present day. It sheds new light on one of the main challenges facing all the large developing economies in their move to become more integrated into the world economy: the fostering of large enterprises, and is a great resource for students and researchers interested in global business, development, economics, and Latin American economic history.

Social Change and Development Alvin Y. So, 1990-03 During the past four decades, the field of development has been dominated by three schools of research. The 1950s saw the modernization school, the 1960s experienced the dependency school, the 1970s developed the new world system school, and the 1980s is a convergence of all three schools. Alvin Y. So examines the dynamic nature of these schools of development: what each of them represents, their contributions, how they have criticized each other, how they have defended themselves, and how they were transformed. He reviews a variety of empirical studies focusing on the classical and the new models to show how each of the perspectives affects the study of development. In addition, this book features a unique emphasis on the research implications of the three perspectives, involving changes in orientation, agenda, methodology, and findings.
