An Introduction to Generalized Linear Models George H. Dunteman, Moon-Ho R. Ho, 2006 Do you have data that is not normally distributed and don't know how to analyze it using generalized linear models GLM Beginning with a discussion of fundamental statistical modeling concepts in a multiple regression framework the authors extend these concepts to GLM including Poisson regression logistic regression and proportional hazards models and demonstrate the similarity of various regression models to GLM Each procedure is illustrated using real life data sets and the computer instructions and results will be presented for each example Throughout the book there is an emphasis on link functions and error distribution and how the model specifications translate into likelihood functions that can through maximum likelihood estimation be used to estimate the regression parameters and their associated standard errors This book provides readers with basic modeling principles that are applicable to a wide variety of situations

Key Features Provides an accessible but thorough introduction to GLM exponential family distribution and maximum likelihood estimation Includes discussion on checking model adequacy and description on how to use SAS to fit GLM Describes the connection between survival analysis and GLM This book is an ideal text for social science researchers who do not have a strong statistical background but would like to learn more advanced techniques having taken an introductory course covering regression analysis

Meyers,Glenn

Gamst,A.J. Guarino,2006 Multivariate designs were once the province of the very few exalted researchers who understood the underlying advanced mathematics Today through the sophistication of statistical software packages such as SPSS virtually all graduate students across the social and behavioural sciences are exposed to the complex multivariate statistical techniques without having to learn the mathematical computations needed to acquire the data output These students in psychology education political science etc will never be statisticians and appropriately so their preparation and coursework reflects less of an emphasis on the mathematical complexities of multivariate statistics and more on the analysis and the interpretation of the methods themselves and the actual data output This book provides full coverage of the wide range of multivariate topics in a conceptual rather than mathematical approach The author gears toward the needs level of sophistication and interest in multivariate methodology of students in applied areas that need to focus on design and interpretation rather than the intricacies of specific computations The book includes Coverage of the most widely used multivariate designs multiple regression exploratory factor analysis MANOVA and structural equation modeling Integrated SPSS examples for hands on learning from one large study for consistency of application throughout the text Examples of written results to enable students to learn how the results of these procedures are communicated Practical application of the techniques using contemporary studies that will resonate with students *Research Methodology in Zoology* P.S.
