Contemporary Architecture and the Digital Design Process Peter Szalapaj, 2014-04-23 Contemporary Architecture and the Digital Design Process introduces the reader to new developments in the computer modelling of design form in contemporary architectural practice through a series of detailed case studies The book illustrates how evolving design practices use and exploit the potential of new computing technologies in a wide range of areas and application A central thesis of this book is that technology follows design demand rather than design adjusting to available new technology Designers are not merely passive recipients of prescribed computing tools and techniques Instead they are increasingly able to express their intuitive design ideas through the rational medium of computing The book features several contemporary building projects each of which introduces a range of CAD and computing issues based upon the work of creative architectural and engineering design practices These

include the offices of Frank O Gehry Peter Cook and Colin Fournier Anthony Hunt Associates Peter Hubner Szyskowitz Kowalski and Faulkner Brown All these examples show what architects need to know and the skills they need to acquire to use advanced CAD technology *The Proceedings of the 2023 Conference on Systems Engineering Research* Dinesh Verma,Azad M. body of information that coordinates the process from design through a building's lifecycle. Organized around the key fields of Designing Design, Designing Assembly and Designing Industry, this book is a reference work on digital technologies as key factors in architectural design, fabrication and workflow organization. It presents essays and case studies from some of the leading voices on the topic.

Research and Advanced Technology for Digital Libraries Christos Nikolaou, Constantine Stephanidis, 2003-07-31 Digital Libraries are complex and advanced forms of information systems which extend and augment their physical counterparts by amplifying existing resources and services and enabling development of new kinds of human problem solving and expression. Their complexity arises from the data-rich domain of discourse as well as from extended demands for multi-disciplinary input involving distributed systems architectures, structured digital documents, collaboration support, human-computer interaction, information filtering, etc. In addition to the broad range of technical issues, ethics and intellectual property rights add to the complication that is normally associated with the development, maintenance and use of Digital Libraries. The Second European Conference on Digital Libraries ECDL 98 builds upon the success of the first of this series of European Conferences on Research and Advanced Technology for Digital Libraries held last year in Pisa, Italy, September 1-3, 1997. This series of conferences is partially funded by the TMR Programme of the European Commission and is actively supported and promoted by the European Research Consortium on Informatics and Mathematics (ERCIM). The aim is to bring together the different communities involved in the development of Digital Libraries to review progress and to discuss strategies, research and technological development, RTD issues as well as specific topics related to the European context. These communities include professionals from universities, research centres, industry, government agencies, public libraries, etc.

Handbook of Research on Digital Research Methods and Architectural Tools in Urban Planning and Design Abusaada, Hisham, Vellguth, Carsten, Elshater, Abeer, 2019-06-28 The efficient usage, investigation and promotion of new methods, tools and technologies within the field of architecture, particularly in urban planning and design, is becoming more critical as innovation holds the key to cities becoming smarter and ultimately more sustainable. In response to this need, strategies that can potentially yield more realistic results are continually being sought. The Handbook of Research on Digital Research Methods and Architectural Tools in Urban Planning and Design is a critical reference source that comprehensively covers the concepts and processes of more than 20 new methods in both planning and design in the field of architecture and aims to explain the ways for researchers to apply these methods in their works. Pairing innovative approaches alongside traditional research methods, the physical dimensions of traditional and new cities are addressed in addition to the non-physical aspects and applied models that are currently under development in new settlements such as sustainable cities, smart cities, creative cities and intercultural cities. Featuring a wide range of topics such as built environment, urban morphology and city information modeling, this book is essential for researchers, academicians, professionals, technology developers, architects, engineers and policymakers.
