

Sedimentary Rocks: Deposition

- Eventually, the moving water or wind slows and deposits the sediment.
- If water is carrying the sediment, rock fragments and other materials sink to the bottom of a lake or ocean.
- Deposition is the process by which sediment settles out of the water or wind carrying it.
- After sediment has been deposited, the processes of compaction and cementation change the sediment into sedimentary rock.
- In addition to particles of rock, sediment may include shells, bones, leaves, stems, and other remains of living things.
- Over time, any remains of living things in the sediment may slowly harden and change into fossils trapped in the rock.
