Wetland and Riparian Areas of the Intermountain West Mark C. McKinstry, Wayne A. Hubert, Stanley H. Anderson, 2010-01-01 Wetlands and riparian areas between the Rocky Mountains and the Sierra Nevada are incredibly diverse and valuable habitats More than 80 percent of the wildlife species in this intermountain region depend on these wetlands which account for less than 2 percent of the land area for their survival At the same time the wetlands also serve the water needs of ranchers and farmers recreationists vacation communities and cities It is no exaggeration to call water the liquid gold of the West and the burgeoning human demands on this scarce resource make it imperative to understand and properly manage the wetlands and riverine areas of the Intermountain West This book offers land managers biologists and research scientists a state of the art survey of the ecology and management practices of wetland and riparian areas in the Intermountain West Twelve articles examine such diverse issues as laws and regulations affecting these habitats the unique physiographic features of the region the importance of wetlands and riparian areas to fish wildlife and livestock the ecological function of these areas their value to humans and the methods to evaluate these habitats The authors also address the human impacts on the land from urban and suburban development mining grazing energy extraction recreation water diversions and timber harvesting and suggest ways to mitigate such impacts

Habitat Management for Migrating and Wintering Waterfowl in North America Loren M. Smith, Roger L. Pederson, Richard M. Kaminski, 1989 This important compilation on habitat management for waterfowl throughout North America addresses practicing waterfowl biologists and managers researchers and students of waterfowl ecology and management

William Mannan,1988 The mining of sand and gravel deposits in the floodplains of rivers can disturb valuable riparian habitat
in the arid Southwest Disturbed land can be reclaimed to provide fish and wildlife habitat if water is present The depth
shoreline shape and slope area location and number of sand and gravel pits and the plant species that revegetate disturbed
areas can be managed to influence subsequent colonization by animals Native species of plants generally are preferable to
exotics when revegetating disturbed areas even if native species require special treatments to become established
Monitoring of critical habitat features and plant and animal species is necessary to document the effectiveness of reclamation
efforts and to ensure that habitat once established is not lost Ducks, Geese, and Swans of North America Guy A.
Baldassarre,2014 Ducks Geese and Swans of North America has been hailed as a classic since the first edition was published
in 1942 A must have for professional biologists birders waterfowl hunters decoy collectors and wildlife managers this fully
revised and updated edition provides definitive information on the continent s forty six species Maps of both winter and
breeding ranges are presented with images by top waterfowl photographers and the acclaimed original artwork of Robert W
Bob Hines Originally authored by F H Kortright and later revised by Frank Bellrose this latest edition which has been
meticulously updated by renowned waterfowl biologist Guy Baldassarre continues the legacy of esteemed authors Each
species account contains in depth sections on identification distribution migration behavior habitat population status
breeding biology rearing of young recruitment and survival food habits and feeding ecology molts and plumages conservation
and management To facilitate identification the species accounts also include detailed illustrations of wings An appendix
contains comparative illustrations of ducklings goslings and cygnets Guy Baldassarre has hit the target His remake of the
Kortright Bellrose classic provides good biological descriptions wonderful photographs and illustrations and easy to
understand information about waterfowl I would encourage every hunter and enthusiast to have these books as an
educational guide to waterfowl and their needs H Dale Hall CEO Ducks Unlimited Inc When as an eleven year old in 1942 I
read F H Kortright s first edition of this book it altered the trajectory of my life Every subsequent edition including this latest
update by Guy Baldassarre has improved the landmark reference I can t imagine that anyone interested in waterfowl or
wetlands can live without this indispensable book Paul A Johnsgard University of Nebraska Lincoln Creating a brand new
version of such a timeless and previously revised classic is a risky venture indeed but nobody could be better suited for this
monumental task than Guy Baldassarre He has created a stunning new classic at once magnificent in its visual appeal and

obvious passion patience and skill This book absolutely belongs on the shelf or coffee table of anyone who has ever marveled
