Rakison Assistant Professor of Psychology Carnegie Mellon University, Lisa M. Oakes Associate Professor of Psychology University of Iowa, 2003-01-09 Whether or not infants earliest perception of the world is a blooming buzzing confusion it is not long before they come to perceive structure and order among the objects and events around them At the core of this process and cognitive development in general is the ability to categorize to group events objects or properties together and to form mental representations or concepts that encapsulate the commonalities and structure of these categories Categorization is the primary means of coding experience underlying not only perceptual and reasoning processes but also inductive inference and language The aim of this book is to bring together the most recent findings and theories about the

origins and early development of categorization and conceptual abilities Despite recent advances in our understanding of this area a number of hotly debated issues remain at the center of the controversy over categorization Researchers continue to ask questions such as Which mechanisms for categorization are available at birth and which emerge later What are the relative roles of perceptual similarity and nonobservable properties in early classification What is the role of contextual variation in categorization by infants and children Do different experimental procedures reveal the same kind of knowledge Can computational models simulate infant and child categorization How do computational models inform behavioral research What is the impact of language on category development How does language partition the world This book is the first to address these and other key questions within a single volume The authors present a diverse set of views representing cutting edge empirical and theoretical advances in the field The result is a thorough review of empirical contributions to the literature and a wealth of fresh theoretical perspectives on early categorization *InfoWorld* ,1983-03-28 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects *Early Category and Concept Development* David H. decisions and get more from technology Concepts and Conceptual Development Ulric Neisser,1989-03-31 Concepts and Conceptual Development draws together a wide range of theorists to consider many different aspects of the psychology of concepts *Fundamental Physicochemical Properties of Germanene-related Materials* Chi-Hsuan Lee,Thi Dieu Hien Nguyen,Vo Khuong Dien,Shih-Yang Lin,Ming-Fa Lin,2023-05-23 Fundamental Physicochemical Properties of Germanene related Materials A Theoretical Perspective provides a comprehensive review of germanene related materials to help users understand the essential properties of these compounds The book covers various germanium complex states such as germanium oxides germanium on Ag germanium silicon composites and germanium compounds Diverse phenomena are clearly illustrated using the most outstanding candidates of the germanium germanene related material Delicate simulations and analyses are thoroughly demonstrated under the first principles method being fully assisted by phenomenological models Macroscopic phenomena in chemical systems including their principles practices and concepts of physics such as energy structure thermodynamics and quantum chemistry are fully covered Germanium based materials play critical roles in the basic and applied sciences as clearly revealed in other group IV and group V condensed matter systems Their atomic configurations are suitable for creating the active chemical bonding among the identical and or different nearest neighboring atoms leading to diverse physical chemical material environments Provides a comprehensive review of germanene related materials with a physicochemical and theoretical foundation that is useful for readers in understanding the essential properties of these compounds Presents a unique theoretical framework under single and multi hybridization theory Contains significant combinations with phenomenological and experimental measurements Focuses on the study of macroscopic phenomena in chemical systems in terms of their principles practices and concepts of physics such as energy structure thermodynamics and quantum chemistry **Interior Design Innovators 1910-1960** Cherie Fehrman,Kenneth Fehrman,2009-10 A scholarly review of the prominent designers and designs from 1910 1960 covering the Organic Design Movement methods and materials of construction and in depth measurements with hundreds of archival photographs The Making of Human Concepts Denis Mareschal,Paul C. Quinn,S. E. G. Lea,2010 Human adults appear different from other animals in their ability to form abstract mental representations that go beyond perceptual similarity In short they can conceptualize the world This apparent uniqueness leads to an immediate puzzle WHEN and HOW does this abstract system come into being To answer this question we need to explore the origins of adult concepts both developmentally and phylogenetically When does the developing child acquire the ability to use abstract concepts Does the transition occur around 2 years with the onset of symbolic representation and language Or is it independent of the emergence of language When in evolutionary history did an abstract representational system emerge Is there something unique about the human brain How would a computational system operating on the basis of perceptual associations develop into a system operating on the basis of abstract relations Is this ability present in other species but masked by their inability to verbalise abstractions

Perhaps the very notion of concepts is empty and should be done away with altogether This book tackles the age old puzzle of what might be unique about human concepts Intuitively we have a sense that our thoughts are somehow different from those of animals and young children such as infants Yet if true this raises the question of where and how this uniqueness arises What are the factors that have played out during the life course of the individual and over the evolution of humans that have contributed to the emergence of this apparently unique ability This volume brings together a collection of world specialists who have grappled with these questions from different perspectives to try to resolve the issue It includes contributions from leading psychologists neuroscientists child and infant specialists and animal cognition specialists Taken together this story leads to the idea that there is no unique ingredient in the emergence of human concepts but rather a powerful and potentially unique mix of biological abilities and personal and social history that has led to where the human mind now stands A must read for students and researchers in the cognitive sciences *Hungarian Basic Course, Units 1- 24* Foreign Service Institute (U.S.), Augustus A. Koski, 1964
