Armchair Astronomy:

Patrick Moore's Armchair Astronomy Patrick Moore, 1984 Explores some of the more off beat theories and discoveries in astronomy mixing the historical with the modern in a narrative interspersed with the author's observations and personal anecdotes

The Astronomer's Chair Omar W. Nasim, 2021-09-21 The astronomer's observing chair as both image and object and the story it tells about a particular kind of science and a particular view of history The astronomer's chair is a leitmotif in the history of astronomy appearing in hundreds of drawings prints and photographs from a variety of sources Nineteenth century stargazers in particular seemed eager to display their observing chairs task specific often mechanically adjustable observatory furniture designed for use in conjunction with telescopes But what message did they mean to send with these images In *The Astronomer's Chair* Omar W Nasim considers these specialized chairs as both image and object offering an original framework for linking visual and material cultures Observing chairs Nasim ingeniously argues showcased and embodied forms of scientific labor personae and bodily practice that appealed to bourgeois sensibilities Viewing image and object as connected parts of moral epistemic and visual economies of empire Nasim shows that nineteenth century science was represented in terms of comfort and energy and that manly postures of Western astronomers at work in specialized chairs were contrasted pointedly with images of effete and cross legged Oriental astronomers Extending his historical analysis into the twentieth century Nasim reexamines what he argues to be a famous descendant of the astronomer's chair Freud's psychoanalytic couch which directed observations not outward toward the stars but inward toward the stratified universe of the psyche But whether in conjunction with the mind or the heavens the observing chair was a point of entry designed for specialists that also portrayed widely held assumptions about who merited epistemic access to these realms in the first place With more than 100 illustrations many in color flexibound

Compendium of Practical Astronomy Günter D. Roth, 2012-12-06 It is a pleasure to present this work which has been well received in German speaking countries through four editions to the English speaking reader We feel that this is a unique publication in that it contains valuable material that cannot easily if at all be found elsewhere We are grateful to the authors for reading through the English version of the text and for responding promptly for the most part to our queries Several authors have supplied us on their own initiative or at our suggestion with revised and updated manuscripts and with supplementary English references We have striven to achieve a translation of *Handbuch für Sternfreunde* which accurately presents the qualitative and quantitative scientific principles contained within each chapter while maintaining the flavor of the original German text Where appropriate we have inserted footnotes to clarify material which may have a different meaning and or application in English speaking countries from that in Germany When the first English edition of this work *Astronomy A Handbook* translated by the late A Beer appeared in 1975 it contained 21 chapters This new edition is over twice the length and contains 28 authored chapters in three volumes At Springer's request we have devised a new title *Compendium of Practical*

Science for All Peter J. Bowler, 2009-10-15 Recent scholarship has revealed that pioneering Victorian scientists endeavored through voluminous writing to raise public interest in science and its implications But it has generally been assumed that once science became a profession around the turn of the century this new generation of scientists turned its collective back on public outreach Science for All debunks this apocryphal notion Peter J Bowler surveys the books serial works magazines and newspapers published between 1900 and the outbreak of World War II to show that practicing scientists were very active in writing about their work for a general readership Science for All argues that the social environment of early twentieth century Britain created a substantial market for science books and magazines aimed at those who had benefited from better secondary education but could not access higher learning Scientists found it easy and profitable to write for this audience Bowler reveals and because their work was seen as educational they faced no hostility from their peers But when admission to colleges and universities became more accessible in the 1960s this market diminished and professional scientists began to lose interest in writing at the nonspecialist level Eagerly anticipated by scholars of scientific engagement throughout the ages Science for All sheds light on our own era and the continuing tension between science and public understanding

Astronomy Communication Andre Heck, C. Madsen, 2013-03-14 Astronomy has always been one of the easiest of the sciences to convey to the public That is partly because it produces spectacular pictures that can be explained at least in part and admired partly because understanding of astronomy usually does not depend upon a knowledge of a complex classification system or esoteric terminology and partly because its extremes in distances and times challenge our imagination and philosophies Most scientists enjoy sharing with others the discoveries made by themselves and their colleagues The primary purpose of scientific research is to discover to learn and to understand When we succeed we enjoy sharing that understanding Education is most pleasurable when our audience wishes to learn and we have something important to convey A field that does not communicate effectively with the public soon loses its interest and support Author Andre Heck explains the many different ways in which professional communication now occurs while Leslie Sage explains how such communication should be done Astronomy done with spacecraft and large equipment is very expensive and the funds for those ultimately come from the public The cost of astronomy prorated over the number of research astronomers is perhaps the highest in all the sciences If astronomers do not share their results with the public they will lose its support However for most astronomers the desire to share and educate dominates over the pragmatic need to win public support With the advent of new communication techniques television videos CDs DVDs animation simulations we have new methods to communicate in addition to the conventional ones of the printed and

spoken word **Extraterrestrial Archaeology** David Hatcher Childress, 2000 Occasionally reissued with the same ISBN but with slightly differing bibliographical details Information Handling in Astronomy Andre Heck, 2012-12-06 The pilot boat just moved away and its lights are already fading towards the coast of Northeastern Queensland over which Saturn is going to set There is still quite some time to go before dawn The big ship has now regained her cruise speed following its roughly northwesterly route in the South Coral Sea along the chain of nearby reefs Few people are around at this time except a dozen early birds sharing some shipshaping exercise on the top deck and taking advantage of the relative coolness of the night On my way down to the stateroom I cannot but stop once more in front of that elegant composition by British artist Brigid Collins 1963 hanging in the monumental staircase between Decks 7 and 8 That piece 2 of art a 1 8x 1 8m oil on canvas plus collage entitled Berinl in honour of the Danish explorer gathers together many navigation related themes of the time Suns Moons planets sky maps astrolabes small telescopes as well as drawings diagrams and charts of all kinds It is somehow a digest of how astronomical information was then collected made available and used Meadowlark Economics James Eggert, Jim Eggert, 2009 Alarmed by the disappearance of meadowlarks from the fields near his home James Eggert embarked on a close study of the economic and ecological factors behind the loss His inquiry led him to conclude that the meadowlark's survival is a metaphor for ours that our future is intimately linked to the same interplay of economics culture technology and spirituality In this innovative educational book Eggert helps readers understand how our environment is connected to in fact a vital part of our economy and business culture In the title essay Eggert critiques free market capitalism borrowing from Thoreau as he investigates what he calls meadowlark values in education and business The author highlights the preciousness of the Earth itself and persuasively describes the creative possibilities in using science culture evolutionary history and spiritual traditions to gain a deeper understanding of how we might heal the planet A foreword by environmentalist Bill McKibben and an afterword by renowned Buddhist thinker Thich Nhat Hahn add context to this authoritative supplement to current economics texts *Celestial Shadows* John Westfall, William Sheehan, 2014-11-19 Much of what is known about the universe came from the study of celestial shadows This book looks in detail at the way eclipses and other celestial shadows have given us amazing insights into the nature of the objects in our solar system and how they are even helping us discover and analyze planets that orbit stars other than our Sun A variety of eclipses transits and occultations of the moons of Jupiter and Saturn Pluto and its satellite Charon asteroids and stars have helped astronomers to work out their dimensions structures and shapes even the existence of atmospheres and structures of exoplanets Long before Columbus set out to reach the Far East by sailing West the curved shadow of the Earth on the Moon during a lunar eclipse revealed that we inhabit a round world a globe More recently comparisons of the sunlit and Earthlit parts of the Moon have been used to determine changes in the Earth's brightness as a way of monitoring possible effects in cloud coverage which may be related to global warming Shadows were used by the Greek mathematician Eratosthenes to work out the first

estimate of the circumference of the Earth by Galileo to measure the heights of the lunar mountains and by eighteenth century astronomers to determine the scale of the Solar System itself Some of the rarest and most wonderful shadows of all are those cast onto Earth by the lovely Evening Star Venus as it goes between the Earth and the Sun These majestic transits of Venus occur at most two in a century after the 2012 transit there is not a chance to observe this phenomenon until 2117 while the more common sweep of a total solar eclipse creates one of the most dramatic and awe inspiring events of nature Though it may have once been a source of consternation or dread solar eclipses now lead thousands of amateur astronomers and eclipse chasers to travel the globe in order to experience the dramatic view under totality These phenomena are among the most spectacular available to observers and are given their full due in Westfall and Sheehan s comprehensive study

Astronomy Now, 2007 It Came From Outer Space Wearing an RAF Blazer! Martin Mobberley, 2013-07-23 To British television viewers the name Patrick Moore has been synonymous with Astronomy and Space Travel since he first appeared on *The Sky at Night* in 1957 To amateur astronomers he has been a source of inspiration joy humour and even an eccentric role model since that time Most people know that his 55 years of presenting *The Sky at Night* is a world record but what was he really like in person What did he do away from the TV cameras in his observatory and within the British Astronomical Association the organisation that inspired him as a youngster Also precisely what did he do during the War Years a subject that has always been shrouded in mystery Martin Mobberley a friend of Patrick Moore s for 30 years and a former President of the British Astronomical Association has spent ten years exhaustively researching Patrick s real life away from the TV cameras His childhood RAF service tireless voluntary work for astronomy and charity and his endless book writing are all examined in detail His astronomical observations are also examined in unprecedented detail along with the battles he fought along the way and his hatred of bureaucracy and political correctness No fan of Sir Patrick Moore can possibly live without this work on their bookshelf How Cosmologists Explain the Universe to Friends and Family Karim A. Malik, David R. Matravets, 2019-11-21 This fascinating book provides an accessible and up to date overview of modern cosmology In particular the book discusses the formation of the Cosmic Microwave Background and the evolution of large scale structures in the universe the distribution of galaxies and clusters of galaxies on very large distance scales Following a brief introduction the authors describe the scientific method how science is done They then discuss observational cosmology the instruments and what observations can be done with them and what is derived from those observations After discussing the constituents of the universe including dark matter and dark energy the authors provide an outline of the forces that shape the universe with particular emphasis on gravitation Following this the reader is taken on a journey in time from the present day back to the very beginning of the universe a period called inflation which sets the initial conditions for the subsequent evolution of the universe The book ends with a brief chapter on what lies beyond Written by two experts the book is aimed at the interested lay person with little or no physics background but an interest in modern cosmology
