Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have

remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued

Fluorine and the Environment: Agrochemicals, Archaeology, Green Chemistry and Water, 2006-10-04 Advances in Fluorine Science is a new book series presenting critical multidisciplinary overviews on areas in which fluorine and fluoride compounds have a decisive impact The individual volumes of Advances in Fluorine Science are thematic addressing comprehensively both the science and applications on topics including the Environment Green chemistry Medicine Health Life Sciences New Technologies Materials Science Energy and the Earth Sciences In the present volume the key position of

fluoro products in agriculture is reviewed since a large percentage of agro chemicals and pesticides contain at least one fluorine atom. However, improvements in the use of fluorine based products in agrochemicals cannot be developed without taking into consideration a safer environment on both levels of greener synthesis routes and a reduction of the negative impact on plants and organisms. Within this scope, fluorine has a very peculiar place since its high reactivity yields several advantages for instance in by passing various polluting multi step reactions. Fluorine based materials are reviewed as efficient tools for protecting our cultural heritage. Also using up to date techniques such as ion beam analysis this element can help relative dating applications ranging from burial durations of archaeological bones and teeth to the determination of exposure ages of meteorites on the Antarctic ice shield. Providing an original approach of the complex relationships between chemistry and the environment. Reviewing the key position of fluoro products in agriculture. Multidisciplinary contributions from chemists, geologists, biologists, environmentalists and industry staffs.

Middle Molecular Strategy Koichi Fukase, Takayuki Doi, 2021-07-13. This book highlights recently discovered aspects of middle size molecules focusing on 1 their unique bio functions on the basis of derivatives and conjugates of natural products saccharides, peptides and nucleotides 2 the synthesis of structurally complex natural products 3 special synthetic methods for conjugated functional molecules and 4 novel synthetic methods using flow chemistry. Given its scope the book is of interest to industrial researchers and graduate students in the fields of organic chemistry, medicinal chemistry and materials science.

Modern Fluoroorganic Chemistry Peer Kirsch, 2013-03-18. The second edition of this classic reference work has been completely revised and updated as well as being enlarged by 20% to reflect the latest developments in synthetic organic fluorine chemistry taking into account new applications in materials science and medicinal chemistry. The new developments in transition metal catalyzed methods for the introduction of fluorine and fluorinated groups are discussed. In addition new chapters have been added on such important applications as organic electronics, OLEDs and fluorinated dyes. Appendices containing synthetic procedures and conversions round off this comprehensive work. This work is a valuable reference for fluorine chemists that also provides nonspecialists with an introduction to the field. From reviews of the first edition a well produced book with attractive graphics, photos and schemes. Throughout the book coloured electrostatic maps of small organofluorine compounds are used to illustrate charge distributions. These are effective as well as attractive. I would point any organic chemist to this book who wants to learn about and do some fluorine chemistry. It provides uncluttered descriptions and a clear orientation to the literature in this important area of the organic chemistry.
