Soft Tissue Biomechanical Modeling for Computer Assisted Surgery Yohan Payan,2012-04-27 This volume focuses on the biomechanical modeling of biological tissues in the context of Computer Assisted Surgery CAS More specifically deformable soft tissues are addressed since they are the subject of the most recent developments in this field The pioneering works on this CAS topic date from the 1980 s with applications in orthopaedics and biomechanical models of bones More recently however biomechanical models of soft tissues have been proposed since most of the human body is made of soft organs that can be deformed by the surgical gesture Such models are much more complicated to handle since the tissues can be subject to large deformations non linear geometrical framework as well as complex stress strain relationships non linear mechanical framework Part 1 of the volume presents biomechanical models that have been developed in a CAS context and used during surgery This is particularly new since most of the soft tissues models already proposed concern Computer Assisted Planning with a pre operative use of the models Then the volume addresses the two key issues raised for an intra operative use of soft tissues models namely Part 2 how to estimate the in vivo mechanical behavior of the tissues i e what are the values of the mechanical parameters that can deliver realistic patient specific behavior and Part 3 how to build a modeling platform that provides generic real time or at least interactive time numerical simulations

Handbook of Materials Modeling Sidney Yip, 2007-11-17 This Handbook contains a set of articles introducing the modeling and simulation of materials from the standpoint of basic methods and studies The intent is to provide a compendium that is foundational to an emerging field of computational research a new discipline that may now be called Computational Materials This area has become sufficiently diverse that any attempt to cover all the pertinent topics would be futile Even with a limited scope the present undertaking has required the dedicated efforts of 13 Subject Editors to set the scope of nine chapters solicit authors and collect the manuscripts The contributors were asked to target students and non specialists as the primary audience to provide an accessible entry into the field and to offer references for further reading With no precedents to follow the editors and authors were only guided by a common goal to produce a volume that would set a standard toward defining the broad community and stimulating its growth The idea of a reference work on materials modeling surfaced in conversations with Peter Binfield then the Reference Works Editor at Kluwer Academic Publishers in the spring of 1999 The rationale at the time already seemed quite clear the field of computational materials research was taking off powerful computer capabilities were becoming increasingly available and many sectors of the scientific community were getting involved in the enterprise
